CONTENTS

CONTEMPORARY STATE OF NUMERICAL ANALYSIS

Chapter 1 Contemporary State of Numerical Analysis 3

1 WHAT IS NUMERICAL ANALYSIS? 3
2 AREAS OF NUMERICAL ANALYSIS 7
3 AN OLDER SOVIET VIEW OF NUMERICAL ANALYSIS 8
4 A MORE RECENT SOVIET VIEW OF NUMERICAL ANALYSIS 10
5 AUTOMATIC DIGITAL COMPUTERS IN THE WORLD 11
6 TWO SOVIET COMPUTERS 14
7 LITERATURE ON NUMERICAL ANALYSIS 15
8 NUMERICAL INTEGRATION AND INTERPOLATION 16
9 APPROXIMATIONS OF FUNCTIONS 18
10 SOLVING LINEAR ALGEBRAIC EQUATIONS 21
11 SOLVING MATRIX EIGENVALUE PROBLEMS 27
12 DIFFERENCE METHODS FOR LAPLACE'S EQUATION 31

Bibliography 38

CONTENTS

LINEAR PARTIAL DIFFERENTIAL EQUATIONS

Introduction 45

Chapter 1 Partial Differential Equations in the Complex Domain 46

The Cauchy Problem 46

1 TRANSFORMATION TO NORMAL FORM 46
2 BASIC EXISTENCE THEOREMS 48

The Leray-Fantappié Operational Calculus 50

1 PRELIMINARIES 50

Equations of Higher Order 55

Chapter 2 General Theory in the Real Domain 59

Uniqueness and Domains of Dependence for the Cauchy Problem 59

Preliminaries on Function Spaces 62

1 TESTING SPACES 62
2 DUAL SPACES AND DISTRIBUTIONS 64
3 BANACH AND HILBERT SPACES 66
4 LINEAR OPERATORS 67
5 APPLICATIONS TO DIFFERENTIAL EQUATIONS 70

Fourier and Laplace Transforms. Other Operational Calculi 75

1 FOURIER TRANSFORMS 75
2 LAPLACE TRANSFORMS 77
3 SYSTEMS OF PARTIAL-DIFFERENTIAL EQUATIONS AND POTENTIALS 79
4 GENERAL REMARKS ON OPERATIONAL CALCULI 82
5 THEORY OF SEMIGROUPS 85

Chapter 3 General Theory of Equations with Constant Coefficients 88

The Work of Ehrenpreis, Malgrange, and Hörmander 88

1 GENERAL EXISTENCE THEOREMS 88
2 GENERAL REGULARITY THEOREMS 92

The Method of Gelfand and Šilov 97

Chapter 4 Equations of Parabolic Type 102

Equations with Constant Coefficients 102

1 THE CAUCHY PROBLEM FOR HOMOGENEOUS EQUATIONS 102
2 NONHOMOGENEOUS EQUATIONS 105

Parabolic Equations with Variable Coefficients 108

1 PERTURBATION AND PARAMETRIX METHODS 108
2 APPLICATIONS OF SEMIGROUP THEORY 113
3 BOUNDARY VALUE PROBLEMS 115
4 THE METHOD OF VIŠIK 117
5 VARIATIONAL PRINCIPLES 119
6 REGULARITY PROPERTIES 121
7 BARRAR'S *a priori* ESTIMATES 124

Chapter 5 Equations of Elliptic Type 126

General Theory 126

1 CLASSIFICATION 126
2 JOHN'S FUNDAMENTAL SOLUTION 127
3 STRONGLY ELLIPTIC SYSTEMS 132
4 REGULARITY SYSTEMS 134
5 GÅRDING'S INEQUALITY 136
6 THE DOUGLIS-NIRENBERG ESTIMATES 138
7 THE ASSUMPTION OF BOUNDARY VALUES 139
8 GREEN'S AND NEUMANN FUNCTIONS. THE BERGMAN KERNEL 142
9 CONSTRUCTION OF SOLUTIONS 145

Elliptic Equations of Second Order 150

1 MAXIMUM PRINCIPLE 150
2 LAPLACE EQUATION IN A SPHERE 152
3 LOCAL EXISTENCE THEOREMS 154
4 PERRON'S METHOD 159
5 CONCLUDING REMARKS 161

Bibliography 164

Index 197
