Contents (Volume I)

Introduction 1
§ 1. Basic Concepts and Equations of Theory 2
§ 2. Equilibrium States of Collisionless Gravitating Systems 6
§ 3. Small Oscillations and Stability 9
§ 4. Jeans Instability of a One-Component Uniform Medium 10
§ 5. Jeans Instability of a Multicomponent Uniform Medium 14
5.1. Basic Theorem (on the Stability of a Multicomponent System with Components at Rest) 16
5.2. Four Limiting Cases for a Two-Component Medium 17
5.3. Table of Jeans Instabilities of a Uniform Two-Component Medium 18
5.4. General Case of n Components 19
§ 6. Non-Jeans Instabilities 19
§ 7. Qualitative Discussion of the Stability of Spherical, Cylindrical (and Disk-Shaped) Systems with Respect to Radial Perturbations 21

PART I

Theory

CHAPTER I
Equilibrium and Stability of a Nonrotating Flat Gravitating Layer 27
§ 1. Equilibrium States of a Collisionless Flat Layer 28
§ 2. Gravitational (Jeans) Instability of the Layer 31

§ 3. Anisotropic (Fire-Hose) Instability of a Collisionless Flat Layer 37
3.1. Qualitative Considerations 37
3.2. Derivation of the Dispersion Equation for Bending Perturbations of a Thin Layer 38
3.3. Fire-Hose Instability of a Highly Anisotropic Flat Layer 40
3.4. Analysis of the Dispersion Equation 41
3.5. Additional Remarks 42
§ 4. Derivation of Integro-Differential Equations for Normal Modes of a Flat Gravitating Layer 43
§ 5. Symmetrical Perturbations of a Flat Layer with an Isotropic Distribution Function Near the Stability Boundary 50
§ 6. Perpendicular Oscillations of a Homogeneous Collisionless Layer 53
6.1. Derivation of the Characteristic Equation for Eigenfrequencies 53
6.2. Stability of the Model 63
6.3. Permutational Modes 68
6.4. Time-Independent Perturbations ($\omega = 0$) 69
Problems 69

CHAPTER II
Equilibrium and Stability of a Collisionless Cylinder 78
§ 1. Equilibrium Cylindrical Configurations 79
§ 2. Jeans Instability of a Cylinder with Finite Radius 83
2.1. Dispersion Equation for Eigenfrequencies of Axial-Symmetrical Perturbations of a Cylinder with Circular Orbits of Particles 84
2.2. Branches of Axial-Symmetrical Oscillations of a Rotating Cylinder with Maxwellian Distribution of Particles in Longitudinal Velocities 85
2.3. Oscillative Branches of the Rotating Cylinder with a Jackson Distribution Function (in Longitudinal Velocities) 92
2.4. Axial-Symmetrical Perturbations of Cylindrical Models of a More General Type 95
§ 3. Nonaxial Perturbations of a Collisionless Cylinder 97
3.1. The Long-Wave Fire-Hose Instability 97
3.2. Nonaxial Perturbations of a Cylinder with Circular Particle Orbits 100
§ 4. Stability of a Cylinder with Respect to Flute-like Perturbations 104
§ 5. Local Analysis of the Stability of Cylinders (Flute-like Perturbations) 109
5.1. Dispersion Equation for Model (2), § 1 110
5.2. Maxwellian Distribution Function 115
§ 6. Comparison with Oscillations of an Incompressible Cylinder 117
6.1. Flute-like Perturbations ($k_z = 0$) 118
§ 7. Flute-like Oscillations of a Nonuniform Cylinder with Circular Orbits of Particles 119
Problems 125

CHAPTER III
Equilibrium and Stability of Collisionless Spherically Symmetrical Systems 136
§ 1. Equilibrium Distribution Functions 138
§ 2. Stability of Systems with an Isotropic Particle Velocity Distribution 152
2.1. The General Variational Principle for Gravitating Systems with the Isotropic Distribution of Particles in Velocities ($f_0' = f_0(E)$, $f_0' = df_0/dE \leq 0$) 152

2.2. Sufficient Condition of Stability 155
2.3. Other Theorems about Stability. Stability with Respect to Nonradial Perturbations 158
2.4. Variational Principle for Radial Perturbations 160
2.5. Hydrodynamical Analogy 161
2.6. On the Stability of Systems with Distribution Functions That Do Not Satisfy the Condition $f_0'(E) \leq 0$ 163
§ 3. Stability of Systems of Gravitating Particles Moving On Circular Trajectories 164
3.1. Stability of a Uniform Sphere 164
3.2. Stability of a Homogeneous System of Particles with Nearly Circular Orbits 173
3.3. Stability of a Homogeneous Sphere with Finite Angular Momentum 174
3.4. Stability of Inhomogeneous Systems 179
§ 4. Stability of Systems of Gravitating Particles Moving in Elliptical Orbits 186
4.1. Stability of a Sphere with Arbitrary Elliptical Particle Orbits 186
4.2. Instability of a Rotating Freeman Sphere 190
§ 5. Stability of Systems with Radial Trajectories of Particles 193
5.1. Linear Stability Theory 193
5.2. Simulation of a Nonlinear Stage of Evolution 199
§ 6. Stability of Spherically Symmetrical Systems of General Form 207
6.1. Series of the Idlis Distribution Functions 209
6.2. First Series of Camm Distribution Functions (Generalized Polytropes) 219
6.3. Shuster's Model in the Phase Description 231
§ 7. Discussion of the Results 235
Problems 238

CHAPTER IV
Equilibrium and Stability of Collisionless Ellipsoidal Systems 246
§ 1. Equilibrium Distribution Functions 248
1.1. Freeman's Ellipsoidal Models 248
1.2. "Hot" Models of Collisionless Ellipsoids of Revolution 256
§ 2. Stability of a Three-Axial Ellipsoid and an Elliptical Disk 265
2.1. Stability of a Three-Axial Ellipsoid 265
2.2. Stability of Freeman Elliptical Disks 272
§ 3. Stability of Two-Axial Collisionless Ellipsoidal Systems 276
3.1. Stability of Freeman's Spheroids 276
3.2. Peebles–Ostriker Stability Criterion. Stability of Uniform Ellipsoids, "Hot" in the Plane of Rotation 284
3.3. The Fire-Hose Instability of Ellipsoidal Stellar Systems 290
3.4. Secular and Dynamical Instability. Characteristic Equation for Eigenfrequencies of Oscillations of Maclaurin Ellipsoids 294
Problems 296

CHAPTER V
Equilibrium and Stability of Flat Gravitating Systems 323
§ 1. Equilibrium States of Flat Gaseous and Collisionless Systems 327
1.1. Systems with Circular Particle Orbits 327
1.2. Plasma Systems with a Magnetic Field 334

1.3. Gaseous Systems 337
1.4. "Hot" Collisionless Systems 338
§ 2. Stability of a "Cold" Rotating Disk 343
2.1. Membrane Oscillations of the Disk 343
2.2. Oscillations in the Plane of the Disk 362
§ 3. Stability of a Plasma Disk with a Magnetic Field 380
3.1. Qualitative Derivation of the Stability Condition 380
3.2. Variational Principle 381
3.3. Short-Wave Approximation 385
3.4. Numerical Analysis of a Specific Model 387
§ 4. Stability of a "Hot" Rotating Disk 389
4.1. Oscillations in the Plane of the Disk 389
4.2. Bending Perturbations 401
4.3. Methods of the Stability Investigation of General Collisionless Disk Systems 404
4.4. Exact Spectra of Small Perturbations 412
4.5. Global Instabilities of Gaseous Disks. Comparison of Stability Properties of Gaseous and Stellar Disks 428
Problems 434
