Preface	vii
List of contributors	ix
Introduction <i>Françoise Fogelman Soulié and Yves Robert</i>	xi
Part 1 Mathematical tools	1
1 An introduction to discrete iterations <i>François Robert</i>	3
Appendix: Boolean networks <i>Françoise Fogelman Soulié</i>	20
2 From continuous to discrete systems: the theory of itineraries <i>Michel Cosnard</i>	35
3 Random automata networks <i>Jacques Demongeot</i>	47
4 Lyapunov functions associated to automata networks <i>Eric Goles</i>	58
5 Dynamical properties of an automaton with memory <i>Michel Cosnard and Driss Moumida</i>	82
6 Computation on automata networks <i>Maurice Tchuente</i>	101
Part 2 Applications	131
7 Automata networks and artificial intelligence <i>Françoise Fogelman Soulié, Patrick Gallinari, Yann Le Cun and Sylvie Thiria</i>	133
8 Systolic algorithms and architectures <i>Yves Robert</i>	187
9 The systematic design of systolic arrays <i>Patrice Quinton</i>	229
Index	261
