CONTENTS

MOTIVATION vii

CHAPTER 1: NONLINEAR PROBLEMS IN 1+1 AND THEIR LINEARIZATION 1

CHAPTER 2: CLASSICAL FIELD THEORY MODELS: HAMILTONIAN FORMULATION, ACTION-ANGLE VARIABLES, SOLITONS

2.1 Korteweg-de Vries (KdV) Field 16
2.2 Nonlinear Schrödinger Field 20
2.3 Sine-Gordon Field 26
2.4 Massive Thirring Field 31
2.5 Gross-Neveu Family 34

CHAPTER 3: CLASSICAL LATTICE MODELS AND LATTICE APPROXIMANTS OF CLASSICAL FIELDS

3.1 Toda Chain 41
3.2 Completely Integrable Lattice Models: An Overview 45
3.3 (Non-integrable) Lattice Approximants of Classical Fields 48

CHAPTER 4: QUANTIZATION ON A LATTICE: RELATIONSHIP CLASSICAL-QUANTUM

4.1 Coherent States and the Tree Approximation Concept for Bose Systems 54
4.2 Quantized Spin Lattice Systems on Coherent (Bose) Domains 59
4.3 Lattice Fermions on Coherent (Bose) Domains 68

CHAPTER 5: QUANTIZATION ON A LATTICE: SIMPLE BOSE MODELS

5.1 Harmonically Coupled Chain 79
5.2 Completely Integrable Lattice Models: An Overview
5.2.1 General structure of the method 84
5.2.2 Lattice nonlinear Schrödinger model 87
5.2.3 Lattice sine-Gordon model 89
5.2.4 (Bose quantized) lattice massive Thirring model 91

CHAPTER 6: SPIN 1/2 LATTICE SYSTEMS RELATED TO NONLINEAR BOSE PROBLEMS: LATTICE FERMIONS

6.1 Weakly Coupled Bose Systems on a Lattice: Two-level (Spin 1/2) Approximation Concept 98
6.2 The Ice (Six-Vertex) Model and its Bethe Ansatz Solution 108
6.3 Spin 1/2 Lattice versus Bose Lattice: Study of Equivalences
6.3.1 Isotropic spin 1/2 Heisenberg model vs lattice nonlinear Schrödinger model 112
6.3.2 Ice model vs lattice sine-Gordon model 115
6.3.3 Spin 1/2 xyz Heisenberg model vs sine-Gordon model 117
6.4 Spin 1/2 Lattice Models as Lattice Fermi Systems 127

CHAPTER 7: QUANTIZATION IN CONTINUUM: JOINT BOSE-FERMI SPECTRAL PROBLEMS IN 1+1

7.1 Mathematics of "Bosonization" 132
7.2 Nonlinear Schrödinger Type Field with Non-local Harmonic Coupling 138
7.3 Nonlinear Schrödinger Field: Repulsive Case 142
7.4 Massive Thirring Field 146
7.5 Chiral Invariant Gross-Neveu Field 158

CHAPTER 8: QUANTUM MEANING OF CLASSICAL FIELD THEORY FOR FERMI SYSTEMS

8.1 On the Relevance of Classical Solutions of the Nonlinear Wave Equations Corresponding to Fermions in Quantum Field Theory 162
8.2 The Fermi Oscillator Problem 167
8.3 Commuting c-number Path Integral Formulation for Simple Fermi Fields: Classical vs Fermi Quantized Problems 173

CHAPTER 9: ON INFINITE CONSTITUENT "ELEMENTARY" SYSTEMS: CANONICAL (CONSTITUENT) QUANTIZATION OF SOLITON FIELDS

9.1 Free Field Reconstruction of Interacting Fields and the Problem of the Classical-Quantum Relationship
9.1.1 Solitons as classical images of quantum "condensates" 183
9.1.2 ϕ_2^4 model 185
9.1.3 Sine-Gordon model 189
9.1.4 Remarks on the massive Thirring model and its free field reconstruction 192
9.2 Free Field Constituents of the Sine-Gordon Solitons: Quantization, "Confinement" and all that 195
9.3 "Elementary" Two-level Systems and their Interaction in 1+1 Dimensions 204

CHAPTER 10: TOWARDS 1+3: PROBLEMS AND PROSPECTS

10.1 Classical Nonlinear Fields in 1+3: An Account of Non-spinor Models 214
10.2 Classical Nonlinear Fields in 1+3: Spinor Models 218
10.3 Bose Transcription of Fermi Fields as the Link between Classical and Quantum Realities: "Bosonization" in 1+3
10.3.1 "Bosonization" in the perturbative framework 222
10.3.2 Fermions vs bosons, bosons vs fermions: Is there a fundamentality problem? 228
