

INTRODUCTION

- 1-33 CHAPTER ONE: The Calculus of pseudo-differential operators; the Fourier transform on the Schwartz space, the Sobolev spaces H_s , Pseudo-differential operators on H_s , examples of pseudo-differential operators, the algebra of pseudo-differential operators, elliptic operators, invariance under change of coordinates.
- 34-48 CHAPTER TWO: Elliptic pseudo-differential operators on compact manifolds; the Sobolev spaces H_s for compact manifolds, elliptic complexes, compact operators and Fredholm operators, the Hodge decomposition theorem, Poincaré duality for manifolds
- 49-70 CHAPTER THREE: Local invariants depending upon the eigenvalues of an elliptic operator; the spectral decomposition of an elliptic operator, the functional calculus for unbounded operators, kernel functions of elliptic operators on manifolds, an index theorem for elliptic complexes.
- 71-90 CHAPTER FOUR: The Chern-Gauss-Bonnet formula for the Euler characteristic of M . The classical theorem in dimension two, general functorial properties of the invariants B_n , the tensor product of two elliptic operators, the index theorem for the DeRham complex.
- 91-110 CHAPTER FIVE: The Riemann-Roch-Hirzebruch formula for a Kaehler manifold; The Dolbeault complex and twisted Dolbeault complex, Kaehler manifolds, Normalized coordinates on a Kaehler manifold, the index theorem for the Dolbeault complex of a Kaehler manifold, applications of the Riemann-Roch-Hirzebruch theorem.
- 111-122 CHAPTER SIX: The Hirzebruch Signature formula; the signature of a product manifold, the twisted signature complex, the index theorem for the twisted signature complex.
- 123-124 BIBLIOGRAPHY
