

## Contents

ACKNOWLEDGMENTS . . . . .	vii
I. Introduction . . . . .	1
II. Volterra Model . . . . .	7
III. A Primitive Statistical Model of Population Growth . . . . .	23
IV. Equilibrium Theory . . . . .	41
V. Time-Dependent Fluctuations in Population . . . . .	59
VI. Diversity and Stability in Ecological Systems . . . . .	77
VII. Volterra Equations with Random Rate Constants . . . . .	87
VIII. Population Growth as Birth and Death Processes . . . . .	97
IX. Time Lags in Population . . . . .	101
X. Generalization of Volterra Equations . . . . .	113
XI. Experimental Verification of Volterra's Model . . . . .	121
Appendix A. Time Averages of Various Functions of $N_i$ and $\dot{N}_i$ . . . . .	125
Appendix B. Microcanonical Averages of Various Functions of $N_i$ . . . . .	131
Appendix C. Canonical Averages of Various Functions of $N_i$ , $v_i$ , and Their Time Derivatives . . . . .	137
Appendix D. Roots of the Equation $ze^z + \gamma = 0$ , $\gamma$ complex . . . . .	141
References . . . . .	143
