Introduction	1
1 One-dimensional waves in nonlinear nondispersive media	7
1.1 The basic equations and statistical problems of the theory of random waves in nondispersive media	7
1.2 Physical examples of nonlinear waves	14
2 One-dimensional wave dynamics	21
2.1 Exact solution of the Burgers equation; Reynolds number	21
2.2 Burgers equation solution at large Reynolds numbers	24
2.3 Evolution of the basic types of disturbance	31
2.4 Burgers equation, hydrodynamics of noninteracting particles and parabolic equation of quasioptics	41
2.5 Field evolution at low Reynolds numbers	45
3 Lagrangian and Eulerian statistics of random fields	55
3.1 Main statistical properties of random fields	55
3.2 Connection of the statistical properties of random functions with behaviour of their realisations	61
3.3 Lagrangian and Eulerian statistics of random fields	69
4 Random waves of hydrodynamic type	82
4.1 Probabilistic properties of random Riemann waves	82
4.2 Riemann wave spectrum	92

4.3	Density fluctuations of noninteracting particle gas	97
4.4	Probability properties of density fluctuations	109
4.5	Fluctuations of optical wave parameters beyond a random phase screen	114
4.6	Concentration of a passive impurity in a flow with random velocity field	121
4.7	Motion of noninteracting particles under the action of external forces	131
5	Statistical properties of discontinuous waves	138
5.1	Discontinuity influence on the nonlinear wave statistics on the initial stage	138
5.2	Qualitative theory of one-dimensional turbulence, at the stage of developed discontinuities	146
5.3	Self-preservation of random waves in nonlinear dissipative media	161
5.4	Asymptotic analysis of nonlinear random waves at large Reynolds numbers	166
5.5	Turbulence at finite Reynolds numbers; final stage of decay	185
5.6	Statistical properties of waves in a nondispersive medium with arbitrary nonlinearity	194
6	Three-dimensional potential turbulence; the large-scale structure of the Universe	205
6.1	Cellular structure formation in three-dimensional potential turbulence	205
6.2	Asymptotic features of potential turbulence	234
6.3	Density fluctuations in model gas	254
Appendix	Properties of delta functions and their statistical averages	276
Supplement 1	A. L. Melott, S. F. Shandarin Nonlinear gravitational instability of random density waves in the expanding Universe	279
Supplement 2	V. I. Arnold, Yu. M. Baryshnikov, I. A. Bogayevsky Singularities and bifurcations of potential flows	290
