

Contents

Part I. Introduction

Chapter 1. Some Mathematical Concepts

1.1. Elementary Transport Concepts	3
1.2. Elementary Calculus Concepts	5
1.3. Some Elementary Vector and Tensor Operations	9
1.4. Linear Operations with Functions, Vectors, and Matrices. .	15
1.5. Matrix Solutions of Sets of Linear Equations	19
1.6. Matrix Solutions of Linear Simultaneous Differential Equations	23
Assignments	29
Further Reading	30

Chapter 2. Laplace Transforms

2.1. Definitions and Basic Operations	31
2.2. The Inverse Laplace Transform	36
2.3. Application of Laplace Transforms to Ordinary Differential Equations	38
2.4. Application of Laplace Transforms to Partial Differential Equations	42
2.5. Laplace Transforms Applied to Other Equation Forms. .	46
2.6. Complex Variables Applied to the Inverse Laplace Transform	50
2.7. Inverse Laplace Transforms by Integration in the Complex Plane	60
2.8. Solution of Partial Differential Equations	72
2.9. Laplace Transforms and Nonlinear Equations	78
Assignments	83
Further Reading	86

Part II. Transport Analysis in Continuous Processes*Chapter 3. Derivation of the Momentum Transport Equations*

3.1. The Equation of Continuity (Material Balance)	89
3.2. The Equations of Motion (Rate of Momentum Balance) .	91
3.3. Non-Newtonian Fluid Behavior Applied to the Equations of Motion	101
3.4. Generalized Representation of Newtonian and Non-Newtonian Flow	103
3.5. Alternative Forms of the Equations of Motion	106
Assignments	108
Further Reading	109

Chapter 4. Transport Analysis in Fluid Flow Phenomena

4.1. Flow of Fluids in Thin Films	111
4.2. Flow in Circular-Shaped Conduits	114
4.3. Flow Equations Used in Viscometry	123
4.4. Periodic and Unsteady Flow Phenomena	128
4.5. Flow in Various Geometrical Configurations.	134
4.6. Macroscopic Flow, Friction Factors, and Turbulent Flow	140
4.7. Non-Newtonian Macroscopic Properties	146
4.8. Viscoelastic Non-Newtonian Properties	153
4.9. Macroscopic Two-Phase Flow (Solid-Liquid)	155
4.10. Boundary Layer Flow Analysis	162
Assignments	177
Further Reading	183

Chapter 5. Derivation of the Mass Transport Equations

5.1. Governing Equation for Unsteady-State Diffusional Mass Transport with Chemical Reaction and Convective Flow	185
5.2. Penetration Theories of Mass Transport.	196
5.3. Multicomponent and Turbulent Convection Mass Transport	199
5.4. Some Macroscopic Transport Approaches	202
Assignments	206
Further Reading	206

Chapter 6. Transport Analysis in Mass Transport Phenomena

6.1. Diffusion Phenomena	207
6.2. Unsteady-State One-Dimensional Diffusion	209
6.3. Some More Diffusion Problems Solved by Laplace Transform Techniques	216
6.4. Some Diffusion Problems Solved by the Separation of Variables Technique	221
6.5. Moving-Front Diffusion Models	225
6.6. Diffusion and Phase Changes	227
6.7. Diffusion with a Variable Diffusion Coefficient	228
6.8. Chemical Kinetics	232
6.9. Diffusion with Chemical Reaction	234
6.10. Complex Chemical Reactions in Reactors (Diffusion Is Negligible)	247
6.11. Diffusion, Convection, and Chemical Reaction in Thin Films (Wetted-Wall Columns)	251
6.12. Tubular Chemical Reactors	256
6.13. Macroscopic Analysis of Plug Flow Tubular Reactors	271
6.14. Unsteady-State Response of Chemical Reactors	274
6.15. Miscellaneous Reactor Models	282
Assignments	286
Further Reading	295

Part III. Transport Analysis in Discrete Processes*Chapter 7. Finite Difference Calculus*

7.1. Elementary Difference Operations	299
7.2. Interpolation and Extrapolation with Finite Differences	302
7.3. The Difference Operator E	304
7.4. Finite Difference Integration	305
7.5. Summation of Infinite Series by Finite Integration	307
7.6. Finite Difference Integration Techniques	309
7.7. Solutions of First-Order Finite Difference Equations	312
7.8. Solutions of Higher-Order Linear Difference Equations	316
7.9. Simultaneous Difference Equations	324
7.10. Nonlinear Difference Equations of Higher Order	325
Assignments	326
Further Reading	326

Chapter 8. Transport Analysis in Cascaded Systems

8.1. Extraction	327
8.2. Stripping Columns	328
8.3. Unsteady-State Finite Difference Analysis	330
8.4. Cascaded Chemical Reactors at Steady State	333
8.5. Stirred Tank Reactors with Complex Chemical Reactions (Unsteady State)	335
8.6. Distillation Columns (Nonlinear Difference Equations)	338
8.7. Gas-Liquid Plate Reactors	341
8.8. Difference Equations from Differential Equations	344
Assignments	348
Further Reading	350
Index	351
