

# Contents

## 1 *Orthogonal Polynomials*

1	Linear Spaces	1
2	Orthogonal Polynomials	6
3	The Recurrence Formula	8
4	The Christoffel—Darboux Formula	9
5	The Weierstrass Approximation Theorem	11
6	The Zeros of the Orthogonal Polynomials	14
7	Approximation Theory	16
8	More about the Zeros of the Orthonormal Polynomials	23
9	The completeness of the Orthonormal Polynomials in the Space of Square-Integrable Functions	27
10	Generalizations and an Application to Conformal Mappings	32

## 2 *The Classical Orthogonal Polynomials*

1	Rodrigues' Formula and the Classical Orthogonal Polynomials	39
2	The Differential Equations Satisfied by the Classical Orthogonal Polynomials	43
3	On the Zeros of the Jacobi Polynomials	45
4	An Alternative Approach to the Tchebicheff Polynomials	46
5	An Application of the Hermite Polynomials to Quantum Mechanics	49
6	The Completeness of the Hermite and Laguerre Polynomials	53
7	Generating Functions	57

## 3 *The Gamma Function*

1	Definitions and Basic Properties	61
2	Analytic Continuation and Integral Representations	65

## X CONTENTS

3	Asymptotic Expansions	69
4	Beta Functions	75
5	The Logarithmic Derivative of the Gamma Function	77
6	Mellin-Barnes Integrals	78
7	Mellin Transforms	80
8	Applications to Algebraic Equations	81
<b>4</b>	<b><i>Hypergeometric Functions</i></b>	
1	Review of Linear Differential Equations with Regular Singular Points	88
2	The Hypergeometric Differential Equation	90
3	The Hypergeometric Function	93
4	A General Method for Finding Integral Representations	100
5	Integral Representations for the Hypergeometric Function	105
6	The Twenty-four Solutions of the Hypergeometric Equation	106
7	The Schwarz-Christoffel Transformation	112
8	Mappings of Curvilinear Triangles	119
9	Group Theoretic Discussion of the Case $\pi(\alpha_1 + \alpha_2 + \alpha_3) > \pi$	130
10	Nonlinear Transformations of Hypergeometric Functions	132
<b>5</b>	<b><i>The Legendre Functions</i></b>	
1	Laplace's Differential Equation	138
2	Maxwell's Theory of Poles	140
3	Relationship to the Hypergeometric Functions	141
4	Expansion Formulas	147
5	The Addition Theorem	149
6	Green's Functions	153
7	The Complete Solution of Legendre's Differential Equation	156
8	Asymptotic Formulas	161
<b>6</b>	<b><i>Spherical Harmonics in <math>p</math> Dimensions</i></b>	
1	Homogeneous Polynomials	168
2	Orthogonality of Spherical Harmonics	171
3	Legendre Polynomials	175
4	Applications to Boundary Value Problems	183
<b>7</b>	<b><i>Confluent Hypergeometric Functions</i></b>	
1	Relationship to the Hypergeometric Functions	189
2	Applications of These Functions in Mathematical Physics	191
3	Integral Representations	195
4	Asymptotic Representations	198

**8** *Bessel Functions*

1	Basic Definitions	200
2	Integral Representations	203
3	Relationship to the Legendre Functions	205
4	The Generating Function of the Bessel Function	207
5	More Integral Representations	210
6	Addition Theorems	216
7	The Complete Solution of Bessel's Equation	223
8	Asymptotic Expansions for Large Argument	225
9	Airy Functions	230
10	Asymptotic Expansions for Large Indices and Large Arguments	235
11	Some Applications of Bessel Functions in Physical Optics	241
12	The Zeros of Bessel Functions	249
13	Fourier-Bessel Expansions	257
14	Applications in Mathematical Physics	266
15	Discontinuous Integrals	269

**9** *Hill's Equation*

1	Mathieu's Equation	281
2	Hill's Equation	282
3	The Discriminant	287
4	Expansion Theorems	299
5	Inverse Problems	305
6	Hill's Equations with Even Coefficients	309
7	Mathieu's Equation Revisited	310
8	Energy Bands in Crystals	313
	Appendix	314
