

CONTENTS

1. Introduction	1
2. Definite integrals with a large parameter	12
3. Differential equations	44
4. Bessel functions	75
5. The confluent hypergeometric function and the parabolic cylinder functions	96
6. Mathieu functions	109
7. Estimation of the remainder in an asymptotic expansion	117
8. Wave problems in three dimensions	123
References	140
Index	143
