

# TABLE OF CONTENTS

|                         |     |
|-------------------------|-----|
| PREFACE .....           | vii |
| TABLE OF CONTENTS ..... | xi  |

## I STOCHASTIC VARIABLES

|  |    |
|--|----|
| 1 Definition .....                       | 1  |
| 2 Averages .....                         | 5  |
| 3 Multivariate distributions .....       | 10 |
| 4 Addition of stochastic variables ..... | 15 |
| 5 Transformation of variables .....      | 19 |
| 6 The Gaussian distribution .....        | 24 |
| 7 The central limit theorem .....        | 27 |

## II RANDOM EVENTS

|  |    |
|--|----|
| 1 Definition .....                               | 32 |
| 2 The Poisson distribution .....                 | 35 |
| 3 Alternative description of random events ..... | 37 |
| 4 The inverse formula .....                      | 42 |
| 5 The correlation functions .....                | 46 |
| 6 Waiting times .....                            | 49 |

## III STOCHASTIC PROCESSES

|  |    |
|--|----|
| 1 Definition .....                                     | 53 |
| 2 Stochastic processes in physics .....                | 56 |
| 3 Fourier transformation of stationary processes ..... | 60 |
| 4 The hierarchy of distribution functions .....        | 63 |
| 5 The vibrating string and random fields .....         | 67 |
| 6 Branching processes .....                            | 72 |

## IV MARKOV PROCESSES

|   |    |
|---|----|
| 1 The Markov property .....             | 76 |
| 2 The Chapman–Kolmogorov equation ..... | 82 |

|   |    |
|---|----|
| 3 Stationary Markov processes .....     | 85 |
| 4 The extraction of a subensemble ..... | 91 |
| 5 Markov chains .....                   | 94 |
| 6 The decay process .....               | 98 |

## V THE MASTER EQUATION

|   |     |
|---|-----|
| 1 Derivation .....                          | 101 |
| 2 The class of $\mathbb{W}$ -matrices ..... | 106 |
| 3 The long time limit .....                 | 110 |
| 4 Closed isolated physical systems .....    | 114 |
| 5 The increase of entropy .....             | 118 |
| 6 Proof of detailed balance .....           | 121 |
| 7 Expansion in eigenfunctions .....         | 125 |
| 8 The macroscopic equation .....            | 130 |
| 9 The adjoint equation .....                | 135 |

## VI ONE-STEP PROCESSES

|   |     |
|---|-----|
| 1 Definition; the Poisson process .....                               | 139 |
| 2 Random walk with continuous time .....                              | 142 |
| 3 General properties of one-step processes .....                      | 145 |
| 4 Examples of linear one-step processes .....                         | 149 |
| 5 Natural boundaries .....  | 154 |
| 6 Solution of linear one-step processes with natural boundaries ..... | 155 |
| 7 Artificial boundaries .....   | 160 |
| 8 Artificial boundaries and normal modes .....                        | 164 |
| 9 Nonlinear one-step processes .....                                  | 169 |
| 10 First-passage problems .....                                       | 174 |

## VII CHEMICAL REACTIONS

|  |     |
|--|-----|
| 1 Kinematics of chemical reactions ..... | 180 |
| 2 Dynamics of chemical reactions .....   | 185 |
| 3 The stationary solution .....          | 188 |
| 4 Open systems .....                     | 191 |
| 5 Unimolecular reactions .....           | 193 |
| 6 Collective systems .....               | 198 |
| 7 Composite Markov processes .....       | 203 |

**VIII THE FOKKER-PLANCK AND LANGEVIN EQUATIONS**

|  |     |
|--|-----|
| 1 Introduction.....                                    | 209 |
| 2 Derivation of the Fokker-Planck equation .....       | 214 |
| 3 Brownian motion .....                                | 217 |
| 4 The Rayleigh particle .....                          | 221 |
| 5 Application to one-step processes .....              | 224 |
| 6 The multivariate linear Fokker-Planck equation ..... | 228 |
| 7 Kramers' equation.....                               | 232 |
| 8 The Langevin approach .....                          | 237 |
| 9 Use and abuse of the Langevin approach .....         | 246 |

**IX THE EXPANSION OF THE MASTER EQUATION**

|   |     |
|---|-----|
| 1 Introduction to the expansion .....               | 253 |
| 2 General formulation of the expansion method ..... | 257 |
| 3 The emergence of the macroscopic law .....        | 263 |
| 4 The linear noise approximation .....              | 267 |
| 5 Expansion of a multivariate master equation.....  | 273 |
| 6 Higher orders .....                               | 278 |

**X THE DIFFUSION TYPE**

|  |     |
|--|-----|
| 1 Master equations of diffusion type .....   | 284 |
| 2 Diffusion in an external field .....       | 287 |
| 3 Diffusion in an inhomogeneous medium ..... | 291 |
| 4 Multivariate diffusion equation.....       | 293 |
| 5 The limit of zero fluctuations.....        | 298 |

**XI UNSTABLE SYSTEMS**

|   |     |
|---|-----|
| 1 The bistable system .....               | 304 |
| 2 The escape time .....                   | 312 |
| 3 Splitting probability .....             | 316 |
| 4 The Malthus-Verhulst problem .....      | 320 |
| 5 Critical fluctuations .....             | 323 |
| 6 Diffusion in a bistable potential ..... | 326 |
| 7 The parabolic approximation .....       | 331 |
| 8 Limit cycles and fluctuations .....     | 335 |
| 9 The laser as a diffusion problem .....  | 338 |

## TABLE OF CONTENTS

**XII FLUCTUATIONS IN CONTINUOUS SYSTEMS**

|   |     |
|---|-----|
| 1 Introduction .....                            | 345 |
| 2 Diffusion noise .....                         | 347 |
| 3 The method of compounding moments .....       | 349 |
| 4 Fluctuations in phase space density .....     | 354 |
| 5 Fluctuations and the Boltzmann equation ..... | 358 |

**XIII THE STATISTICS OF JUMP EVENTS**

|  |     |
|--|-----|
| 1 Basic formulae and simple example .....              | 367 |
| 2 Jump events in nonlinear systems .....               | 370 |
| 3 Effect of incident photon statistics .....           | 372 |
| 4 Effect of incident photon statistics continued ..... | 376 |

**XIV STOCHASTIC DIFFERENTIAL EQUATIONS**

|   |     |
|---|-----|
| 1 Definitions .....                                     | 381 |
| 2 Heuristic treatment of multiplicative equations ..... | 384 |
| 3 The cumulant expansion .....                          | 388 |
| 4 Three critical comments .....                         | 394 |
| 5 Nonlinear stochastic differential equations .....     | 398 |
| 6 Long correlation times .....                          | 404 |
| 7 The inhomogeneous linear equation .....               | 410 |
| <br>INDEX .....   | 413 |
