	Foreword	VII
	My Friend–T. Kawata, by Eugene Lukacs	IX
	Fourier analysis of weakly stationary stochastic processes, by Tatsuo Kawata	XI
[94] *	Stationary process and harmonic analysis	1
[98]	Remarks on prediction problem in the theory of stationary stochastic processes	33
[100]	On the stochastic process of random noise	41
[110]	A limit theorem for the periodogram (with S. Bochner)	60
[113]	The Fourier series of some stochastic processes	72
[115]	Some convergence theorems for stationary stochastic processes	82
[120]	On the imbedded queueing process of general type	105
[126]	Fourier analysis of nonstationary stochastic processes	116
[127]	On the Fourier series of a stationary stochastic process	144
[130]	On the Fourier series of a stationary process II	167
[131]	Sample properties of weakly stationary processes (with I. Kubo)	181
[139]	Nonstationary stochastic processes	197
[140]	On a class of linear processes	213
[141]	Some analytic properties of random noise processes	233
[142]	Fourier series of weakly stationary and harmonizable stochastic processes	243
[144]	Analytic weakly stationary processes	255
[146]	The sample continuity and the absolute convergence of Fourier series of a stochastic processes of the second order	267
[150]	Some sample properties of stochastic processes of the second order	279
[151]	Lipschitz classes of periodic stochastic processes	293
[152]	The nonvanishing property of a weakly stationary process	305
[153]	On general linear stochastic processes	313
[154]	Uniform convergence of random trigonometric series and sample continuity of weakly stationary processes	331
[155]	Almost periodic weakly stationary processes	347
[156]	Fourier series for a general linear stochastic process	361
	Bibliography of the publications of T. Kawata	391

* Numbers in brackets refer to the Bibliography on pp. 391–400.
