

# Contents

Preface to the Romanian edition . . . . .	5
Foreword . . . . .	11
Foreword to the English edition . . . . .	13

## 0. Introduction

0.1. <i>Brief historical survey</i> . . . . .	15
0.1.1. Problems leading to the notion of distribution . . . . .	15
0.1.2. Fundamental investigations in the theory of distributions . . . . .	16
0.2. <i>Investigated problems</i> . . . . .	18
0.2.1. Concentrated loads . . . . .	18
0.2.2. Problems of general mechanics . . . . .	19
0.2.3. Problems of the mechanics of deformable solids . . . . .	21
0.2.4. Conclusions . . . . .	22

## Part 1

### INTRODUCTION TO THE THEORY OF DISTRIBUTIONS

1. <b>Fundamental concepts and formulae of the theory of distributions</b>	
1.1. <i>Fundamental spaces. Distribution concept</i> . . . . .	25
1.1.1. Fundamental spaces . . . . .	25
1.1.2. The concept of a distribution. Properties . . . . .	32
1.2. <i>Differentiation of distributions. Representative <math>\delta</math> sequences</i> . . . . .	47
1.2.1. Differentiation of distributions . . . . .	47
1.2.2. Representative $\delta$ sequences . . . . .	67
1.3. <i>Composition of distributions</i> . . . . .	77
1.3.1. The direct product . . . . .	78
1.3.2. The convolution product . . . . .	83
1.4. <i>Distributions concentrated on curves and surfaces. Homogeneous distributions</i> . . . . .	86
1.4.1. Distributions concentrated on curves and surfaces . . . . .	87
1.4.2. Homogeneous distributions . . . . .	96
2. <b>Integral transformations in distributions</b>	
2.1. <i>Fourier transform</i> . . . . .	103
2.1.1. General results . . . . .	103
2.1.2. Examples . . . . .	109

2.2. <i>Laplace transform</i>	119
2.2.1. Laplace transform of a distribution of a single variable . . . . .	119
2.2.2. Laplace transform of a distribution of several variables . . . . .	125
2.2.3. Connëction between the Fourier and the Laplace transforms . . . . .	131
<b>3. Variational calculus and differential equations in distributions</b>	
3.1. <i>Variational calculus in distributions</i> . . . . .	135
3.1.1. Distributions of a single variable . . . . .	135
3.1.2. Distributions of several variables . . . . .	147
3.2. <i>Differential equations in distributions</i> . . . . .	157
3.2.1. Ordinary differential equations . . . . .	158
3.2.2. Partial differential equations . . . . .	179
3.3. <i>Green's functions. Green's distributions</i> . . . . .	191
3.3.1. Ordinary differential equations . . . . .	191
3.3.2. Partial differential equations . . . . .	194

## Part 2

### APPLICATIONS OF THE THEORY OF DISTRIBUTIONS IN GENERAL MECHANICS

<b>4. Mathematical model of Newtonian mechanics</b>	
4.1. <i>General concepts and results</i> . . . . .	215
4.1.1. Mechanical magnitudes . . . . .	216
4.1.2. Fundamental equation of Newtonian mechanics . . . . .	228
4.2. <i>Stieltjes integral. Applications to the geometry of masses</i> . . . . .	235
4.2.1. One-dimensional bodies . . . . .	235
4.2.2. Two-dimensional bodies . . . . .	241
4.2.3. Three-dimensional bodies . . . . .	249
<b>5. Theory of concentrated loads</b>	
5.1. <i>Mathematical representation of loads</i> . . . . .	255
5.1.1. Mathematical representation of concentrated forces . . . . .	255
5.1.2. Mathematical representation of continuously distributed loads . . . . .	262
5.2. <i>Mathematical representation of concentrated loads</i> . . . . .	273
5.2.1. Directed concentrated moments . . . . .	274
5.2.2. Rotational concentrated moments (centres of rotation) . . . . .	286
5.2.3. Concentrated moments of dipole type . . . . .	293
5.3. <i>Tensor properties of concentrated loads</i> . . . . .	306
5.3.1. General tensor properties . . . . .	307
5.3.2. Plane case . . . . .	310
<b>6. Applications</b>	
6.1. <i>Collision</i> . . . . .	315
6.1.1. Elastic collision . . . . .	316
6.1.2. Plastic collision . . . . .	320
6.2. <i>Bodies of variable mass</i> . . . . .	329
6.2.1. Particle of variable mass . . . . .	329
6.2.2. Systems of particles of variable mass . . . . .	333

**Part 3**

**APPLICATIONS OF THE THEORY OF DISTRIBUTIONS  
IN MECHANICS OF SOLIDS**

<b>7. Mathematical model of the mechanics of solids</b>	
7.1. <i>General equations of deformable solids</i> . . . . .	341
7.1.1. Geometrical and mechanical aspect of the problem . . . . .	342
7.1.2. Constitutive laws . . . . .	347
7.2. <i>Formulations of the problems of the theory of elasticity. Limiting conditions</i>	350
7.2.1. Formulation in stresses of the problems of the theory of elasticity	350
7.2.2. Formulation in displacements of the problems of the theory of elasticity	355
7.2.3. Modified forms of the equations of the theory of elasticity . . . . .	357
7.2.4. Representation of the solution by stress and displacement potentials	365
<b>8. Bars. Strings</b>	
8.1. <i>Straight bar</i> . . . . .	373
8.1.1. Bending of a straight bar . . . . .	374
8.1.2. Free transverse vibrations of an infinite straight bar . . . . .	378
8.2. <i>Strings</i> . . . . .	381
8.2.1. Equilibrium of a string acted on by loads expressed by continuous functions with discontinuities of the first species . . . . .	381
8.2.2. Vibrating string	391
<b>9. Plane problems of the theory of elasticity</b>	
9.1. <i>Elastic plane</i> . . . . .	393
9.1.1. Static problem. Fundamental solution . . . . .	394
9.1.2. Static problem. Case of arbitrary loads . . . . .	398
9.1.3. Dynamic problem . . . . .	403
9.2. <i>Elastic half-plane</i> . . . . .	417
9.2.1. Fundamental solution in the static case . . . . .	418
9.2.2. Case of arbitrary static loads . . . . .	422
<b>10. Three-dimensional problems of the theory of elasticity</b>	
10.1. <i>Elastic space</i> . . . . .	429
10.1.1. Static problem. Fundamental solution . . . . .	429
10.1.2. Static problem. Case of arbitrary loads . . . . .	435
10.1.3. Dynamic problem . . . . .	443
10.2. <i>Elastic half-space</i> . . . . .	457
10.2.1. Fundamental solution in the static case . . . . .	457
10.2.2. Case of arbitrary static loads . . . . .	469
10.2.3. Dynamic case . . . . .	476
<b>Bibliography</b> . . . . .	485
