INTRODUCTION		1
PART I APPLICATIONS OF BOUNDARY INTEGRAL EQUATION METHODS TO EIGENVALUE PROBLEMS OF ELASTODYNAMICS		
CHAPTER 1	FUNDAMENTALS OF BOUNDARY INTEGRAL EQUATION METHODS FOR ELASTODYNAMICS	11
1.1	General Remarks	11
1.2	Governing Equations of Elastodynamics	11
1.3	Boundary Value Problems and Radiation Conditions	15
1.4	Fundamental Solutions	17
1.5	Elastic Potentials and Their Properties	22
1.6	Green's Formula (Somigliana's Formula)	25
1.7	Conclusions	27
	References	27
CHAPTER 2	FORMULATION OF BOUNDARY INTEGRAL EQUATIONS FOR STEADY-STATE ELASTODYNAMICS	29
2.1	General Remarks	29
2.2	Boundary Integral Equations for the First (Displacement) Problem	30
2.3	Boundary Integral Equations for the Second (Traction) Problem	31
2.4	Boundary Integral Equations for the Third (Mixed) Problem	32
2.5	Formal Relations among Integral Equations	33
2.6	Conclusions	36
	References	37
CHAPTER 3	FORMULATION OF EIGENVALUE PROBLEMS BY THE BOUNDARY INTEGRAL EQUATIONS	39
3.1	General Remarks	39
3.2	Equivalence of Eigenvalues of the Integral Equations and Those of the Original Boundary Value Problems	40
3.3	Integral Equations for Determining Eigenvalues	46
3.4	A Note for the Integral Equations of Exterior Problems	49
3.5	Conclusions	54
	References	54

CHAPTER 4	ANALYTICAL TREATMENT OF INTEGRAL EQUATIONS FOR CIRCULAR AND ANNULAR DOMAINS	56
4.1	General Remarks	56
4.2	Eigenequations and Green's Functions for Antiplane Elastodynamics	56
4.2.1	Integration of the simple layer potential	56
4.2.2	Integration of the double layer potential	58
4.2.3	Jump conditions of simple and double layer potentials	61
4.2.4	Green's formula	62
4.2.5	Green's functions by the layer potentials and Green's formula	63
4.3	Eigenequations and Green's Tensors for Plane Elastodynamics	67
4.3.1	Integration of the simple layer potential	67
4.3.2	Tractions by the simple layer potential	72
4.3.3	Integration of the double layer potential	75
4.3.4	Tractions by the double layer potential	77
4.3.5	Jump conditions of simple and double layer potentials	80
4.3.6	Green's formula	81
4.3.7	Green's tensors by the layer potentials and Green's formula	84
4.4	Eigenequations for Plane Elastodynamics with an Annular Boundary	89
4.4.1	Eigenequation of the fixed-fixed annulus	89
4.4.2	Eigenequation of the free-free annulus	93
4.4.3	Eigenequation of the free (outer)-fixed (inner) annulus	95
4.4.4	Eigenequation of the fixed (outer)-free (inner) annulus	96
4.4.5	A note for irrelevant eigenvalues	97
4.5	Used Formulae	97
4.6	Conclusions	99
	References	103
CHAPTER 5	NUMERICAL PROCEDURES FOR EIGENVALUE PROBLEMS	104
5.1	General Remarks	104
5.2	Eigenvalue Problems	104
5.3	Evaluation of Eigenvalues by the Complex Determinant	105
5.4	Numerical Treatment of the Boundary Integral Equations	106
5.5	Fundamental Kernels in the Two-Dimensional Elastodynamics	109
5.6	Conclusions	111
	References	111
CHAPTER 6	NUMERICAL ANALYSIS OF EIGENVALUE PROBLEMS IN ANTIPLANE ELASTODYNAMICS	113
6.1	General Remarks	113
6.2	Accuracy of Eigenvalues by the Boundary Integral Equation Method	113
6.3	Refinement of the Boundary Approximation by an Arc Element	119
6.4	Accuracy of Eigendensities and Eigenmodes	124
6.5	Analysis of Eigenvalue Problems of a Triangular Shaped Domain	127
6.6	Conclusions	131
	References	131

APPENDIX FOR CHAPTER 6

Analysis of Resonance Phenomena of an Inhomogeneous Protrusion on a Stratum

6.A.1	General remarks	133
6.A.2	Governing equations and boundary conditions	133
6.A.3	Formulation of an integral equation	135
6.A.4	Numerical procedures	138
6.A.5	Numerical examples	139
6.A.6	A note for a required CPU time	144
	References	145

CHAPTER 7	NUMERICAL ANALYSIS OF EIGENVALUE PROBLEMS IN ELASTODYNAMICS	146
7.1	General Remarks	146
7.2	Preliminary Analysis	147
7.3	Analysis of Eigenvalue Problems of a Disc	180
7.4	Analysis of Eigenvalue Problems of an Annulus	185
7.5	Analysis of Eigenvalue Problems of a Dam-Type Structure	191
7.6	Conclusions	194
	References	194

APPENDIX FOR CHAPTER 7

Dominant Mode Analysis around Caverns in a Semi-Infinite Domain

7.A.1	General remarks	196
7.A.2	Resonance analysis around caverns	197
7.A.3	Dominant mode analysis around caverns	201
7.A.4	Short remarks	201
	References	201

PART II

APPLICATIONS OF BOUNDARY INTEGRAL EQUATION METHODS TO EIGENVALUE PROBLEMS OF THIN PLATES

CHAPTER 1	FUNDAMENTALS OF BOUNDARY INTEGRAL EQUATION METHODS FOR THIN PLATES	207
1.1	General Remarks	207
1.2	Governing Equations of Thin Plates	207
1.3	Boundary Value Problems and Radiation Conditions	209
1.4	Fundamental Solutions	211
1.5	Plate Potentials and Their Properties	213
1.6	Green's Formula	215
1.7	Conclusions	216
	References	217
CHAPTER 2	FORMULATION OF BOUNDARY INTEGRAL EQUATIONS FOR THIN PLATES AND EIGENVALUE PROBLEMS	218
2.1	General Remarks	218
2.2	Integral Equations by the Layer Potentials	219

2.3	Integral Equations by Green's Formula	220
2.4	Eigenvalue Problems and Numerical Analysis	222
2.5	Numerical Procedures	225
2.5.1	Straight element approximation and integration method	226
2.5.2	Curved element approximation and integration method	228
2.6	Conclusions	229
	References	230
CHAPTER 3	NUMERICAL ANALYSIS OF EIGNVALUE PROBLEMS IN PLATE PROBLEMS	232
3.1	General Remarks	232
3.2	Accuracy of Eigenvalues by the Boundary Integral Equation Method	232
3.2.1	Accuracy of eigenfrequencies of a plate	232
3.2.2	Accuracy of buckling loads of a plate	240
3.3	Refinement of the Boundary Approximation by an Arc Element	243
3.4	Comparison of the Results by Straight Elements and Curved Elements	246
3.5	Accuracy of Eigendensities and Eigenmodes	249
3.6	Analysis of Eigenvalue Problems of Plates Subjected to In-Plane Force and of an Arbitrary-Shaped Plate	252
3.6.1	Clamped plates	252
3.6.2	Simply supported plates	259
3.6.3	Clamped-simply supported plates	264
3.6.4	Comparison of the results by Green's and layer potential formulations	266
3.6.5	Analysis of an arbitrary-shaped plate	268
3.6.6	Remarks on the eigenvalue analysis of a plate subjected to in-plane force	268
3.7	Conclusions	268
	References	270
	CONCLUDING REMARKS	272
	AUTHOR INDEX	277
	SUBJECT INDEX	279
