## Preface

<b>Chapter 1. Boundary Value Problems in Potential Theory.....</b>	<b>1</b>
1.1. Potential Function .....	1
1.2. Green's Theorem .....	1
1.3. Extension of Green's Theorem by Lord Kelvin.....	3
1.4. Boundary Value Problem (Green's Function) .....	3
1.5. Symmetrical Property of Green's function .....	5
1.6. Meaning of the Constant C in the formula (1.11).....	6
1.7. General Remarks .....	7
1.8. Green's Functions for the Spherical Domain .....	7
1.9. Green's Function for an Infinite domain bounded by a plane Wall ..	8
<b>Chapter 2. Linear Integral Equations.....</b>	<b>11</b>
2.1. Linear Integral Equations.....	11
2.2. Fredholm's Theorems.....	12
2.3. Expansion Theorem.....	13
2.4. Bilinear Formula for Iterated Kernels.....	14
2.5. Mercer's Theorem .....	14
2.6. Remark about the relation of theory of Integral Equations to Eigen- value Problems in Engineering.....	15
<b>Chapter 3. Stieltje's Integrals .....</b>	<b>17</b>
3.1. Concept of Integrals .....	17
3.2. Fluctuation of a Real Function .....	17
3.3. Stieltjes Integral .....	17
3.4. Mean-function of N. Gunther .....	19
3.5. Integral Equations in Stieltjes Integrals. Example of Vibration of Strings .....	20
<b>Chapter 4. Eigen-value Problems in Engineering .....</b>	<b>24</b>
4.1. Vibration of Hollow Elastic Cylinder attached with a Central Axle....	24
4.2. Transverse Vibration of an Elastic Bar which has an attached Mass..	26
4.3. Transverse Vibration of two Elastic Bars which are connected Each other .....	29
4.4. More general eigen-value Problem and Dual Integral Equation asso- ciated with it.....	32
4.5. Transverse Vibration of an Elastic Bars, of Complex Forms.....	34

<b>Chapter 5. Hydrodynamical Foundations.....</b>	<b>38</b>
5.1. Velocity Potential, Hydraulic Pressure, Potential Equation .....	38
5.2. Motion of Solid Bodies which are immersed in a Water Region.....	39
5.3. Equation of Motion of bodies immersed in a Water Region, expressed in generalized Coordinates .....	41
5.4. Modification of Equation of Motion in the Case of Cyclic Motion of Fluids .....	43
5.5. Motion of Deformable Bodies, which are immersed in a Water Region..	47
5.6. Vibration of Bodies which are immersed in a fluid region. Virtual Mass caused by the fluid motion.....	48
5.7. Special Case in which a Water Region extend to infinity .....	51
<b>APPENDIX to Chapter 5.....</b>	<b>52</b>
[A] Principle of Least Action for a Conservative Dynamical System.....	52
[B] Hamilton's principle for a Conservative holonome dynamical system..	54
[C] Principle of Least Action for conservative holonomous dynamical system, in terms of generalized coordinates .....	55
[D] Extension of Hamilton's principle to the Case of non-conservative Dynamical System .....	56
<b>Chapter 6. Eigen-value Problems in Hydro-Elasticity .....</b>	<b>58</b>
6.1. Free Vibration of an Elastic Flat-Plate fitted with Stiffener Ribs....	58
6.2. Free Vibration of an Elastic Bar in a Water Region .....	63
6.3. Existence of the Solution of Problem in Previous Section.....	67
6.4. Free Vibration of Side-Wall of a Water-tank, full of water.....	69
6.5. Concluding Remarks .....	73
<b>Chapter 7. Vibration of Circular Elastic Bars which are immersed in a     Water Region.....</b>	<b>74</b>
7.1. Vibration of an Elastic Circular Bar which is fitted inside a Cylin- drical Tunnel.....	74
7.2. Vibration of an Elastic Bar which is fitted in a Cylindrical Water Tank .....	77
7.3. Transverse Vibration of a Circular Bar which is fitted in a Water Region lying between two plane-walls .....	80
<b>Chapter 8. Vibration of Cylindrical Elastic Shells which are immersed in a     Water Region.....</b>	<b>85</b>
8.1. Theory of Transverse Vibration of Elastic Cylindrical Shells in Con- tact with Water and Subject to action of Combined Stress.....	85
8.2. Virtual Mass of vibrating water which is filled up in a Cylindrical Water Tank .....	90
(A) Long Succession of Cylindrical Tank, inside of which water is	

filled up .....	90
(B) Cylindrical Water Tank, with rigid End Plates.....	90
<b>Chapter 9. Vibration of Side Walls of Rectangular Water Tank which is filled with Water (Solved by Energy method).....</b>	<b>93</b>
9.1. General Remarks.....	93
9.2. Rectangular Water Tank with Free Top Surface (case in which $1 \ll \omega^2 H/g$ )	94
9.3. Rectangular Water Tank with Free Top Surface (Case in which $\omega^2 H/g$ is not large in comparison with unity).....	98
9.4. Case of Rectangular Water Tank which is partly filled with Water..	101
9.5. Case of Rectangular Water Tank, whose side-walls are in state of fixed-four-edges.....	102
9.6. Checking the Degree of accuracy of tentative assumption for the mode of vibration.....	102
<b>Chapter 10. Vibration of Side Walls of a Rectangular Water Tank (Hydro-Elastic Theory) .....</b>	<b>104</b>
10.1. Preliminary Remarks .....	104
10.2. Vibration of rectangular Side-walls, whose four edges are simply supported.....	104
10.3. Vibration of rectangular side-walls, whose four edges are in state of fixed edges .....	110
10.4. Approximate Solution to the problem of previous section by using double infinite series about $\varphi_\mu(\xi_1)$ , $\varphi_\nu(\zeta_1)$ .....	115
