

Table of Contents

I. Functions of a Complex Variable	1
II. The Laplace Transform	16
III. Differential Equations—Stability	24
IV. Bode Diagrams	35
V. Stability Techniques for Linear Systems	41
5.1 Preliminary Remarks	41
5.2 Hurwitz Criterion	43
5.3 Routh Criterion	48
5.4 Michailov Criterion	53
5.5 Meerov Criterion for Aperiodic Stability	54
VI. Stability Techniques for Feedback Systems	57
6.1 Preliminary Remarks	57
6.2 Nyquist Criterion	58
6.3 Root-Locus Method	61
6.4 Neimark's D-Partitions	72
VII. Differential-difference Equations, Time-Lags	77
7.1 Existence	77
7.2 Solution by Laplace Transform	81
7.3 Zeros of the Characteristic Equation, Constant Coefficients	82
7.4 Solution of the n -th Order Equation by the Laplace Trans- form	85

VIII. Stability Techniques for Time-Lag Systems	88
8.1 Introductory Remarks	88
8.2 Preliminary Remarks	88
8.3 Michailov Criterion	89
8.4 Pontrjagin's Criterion	92
IX. Stability Techniques for Time-Lag Feedback Systems	93
9.1 Preliminary Remarks	93
9.2 Nyquist Criterion	93
9.3 Root-Locus Method	96
9.4 Neimark's D-partitions	103
X. Stability of Two Parameter Systems—Neimark's D-partitions	105
XI. A General Stability Criterion for Feedback Systems	110
11.1 Introduction	110
11.2 Banach Space	110
11.3 Examples of Banach Spaces	111
11.4 Operators on a Banach Space	112
11.5 Examples of Operators on a Banach Space	114
11.6 A Simple Feedback System in a Banach Space	115
11.7 Stability in a Banach Space	118
11.8 Applications	119
Appendix I. Computer Program for the Ordinary and Time-Lag Root-Locus Method	122
Appendix II. Examples for the Graphical Criteria	125
Index	149
