Foreword	ix
Preface	xi
Chapter 1. The General Scheme of Allocating Particles and Random Mappings	1
1.1. Probabilistic approach to enumerative problems of combinatorics	3
1.2. The general scheme of allocation and polynomial distribution	7
1.3. Reduction of combinatorial problem to the general scheme of allocation: examples	12
1.4. Local limit theorems	15
1.5. Multiplicities of vertices in a random mapping .	19
1.6. Connectivity of graphs and the general scheme of allocation	26
1.7. The general scheme of allocation and random substitutions	35
1.8. Properties of the logarithmic distribution . . .	37
1.9. Cycles of a random substitution	45
1.10. Linear combinations of lengths of cycles	50
1.11. Order of a random substitution	59
1.12. Components of a random mapping and the general scheme of allocation	72
1.13. The order sequence of components of a random mapping	80
1.14. Notes and references	88

Chapter 2. Branching Processes and Random Trees	95
2.1. Branching processes	97
2.2. Relationship of branching processes and random trees	107
2.3. Limit theorems for conditional distributions of a critical branching process	112
2.4. Conditional distribution of the moment of extinction of a critical branching process . . .	119
2.5. Limit distributions of characteristics of a random tree	135
2.6. Notes and references	143
Chapter 3. Random Forests and Random Mappings	147
3.1. Relationship of forests and mappings	149
3.2. Sizes of trees in a random mapping	154
3.3. Maximal size of trees in a random mapping	165
3.4. Branching processes and random forests	171
3.5. Height of a random mapping	177
3.6. Notes and references	187
References	199
Index	205
Transliteration table (Russian-English)	207
List of OSI publications (cont.)	208
