PREFACE	ix
I. Introduction to Wave Propagation <i>Wallace D. Hayes</i>	1
1. Oscillatory Motions	1
2. Linear Nondissipative Propagating Waves	6
3. Simple One-dimensional Wave Equation	19
4. Physical Problems	27
5. Other Examples of Waves in a Single Space Coordinate	36
6. Strongly Dispersive Waves	39
II. Linear Dispersive Waves <i>Stephen A. Thau</i>	44
1. Examples of Dispersive Waves. Phase and Group Velocities	45
2. Harmonic Waves in Dispersive Media	48
3. Transient Waves in Dispersive Media	50
4. Kinematic Energy Approach for Dispersive Waves	74
5. Effects of Dissipation	78
III. Quasilinear Hyperbolic Systems that Result from Conservation Laws <i>Constantine M. Dafermos</i>	82
1. Conservation Laws and Field Equations	83
2. Hyperbolic Systems	84
3. Generalized Solutions	89
4. Admissibility Criteria for Generalized Solutions	96
5. The Riemann Problem	99

6. Existence, Uniqueness, and Computation of Generalized Solutions	100
<b>IV. Examples of Dissipative and Dispersive Systems Leading to the Burgers and the Korteweg-deVries Equations</b>	<b>103</b>
<i>Sidney Leibovich and A. Richard Seebass</i>	
1. Perturbation Techniques	104
2. Dissipative Gas Dynamics and the Burgers Equation	112
3. Shallow-Water Waves and the Korteweg-deVries Equation	125
<b>V. Dispersive Waves and Variational Principles</b>	<b>139</b>
<i>Gerald B. Whitham</i>	
1. Dispersive Waves	140
2. Fourier Synthesis and Asymptotic Behavior	145
3. Simple Derivation of Group Velocity Concepts for Linear Problems	149
4. Extensions and Examples	152
5. Variational Principles	155
6. Adiabatic Invariants, Wave Action, and Energy	162
7. Nonlinear Group Velocity—Stability of Periodic Waves	164
8. Formal Perturbation Theory	166
<b>VI. Conservation of Wave Action</b>	<b>170</b>
<i>Wallace D. Hayes</i>	
1. Discrete Dynamic Systems	171
2. Action Conservation for a Family of Solutions	173
3. Steady Oscillating System	173
4. Action Conservation for a Slowly Varying System	176
5. Continuous Media	178
6. Waves	180
7. Comparison of Action and Energy Conservation	183
8. Wave Propagation Theory	184
<b>VII. Wave Interactions</b>	<b>186</b>
<i>Owen M. Phillips</i>	
1. The Resonance Conditions	188
2. The Interaction Equations	192
3. Interactions among Surface Gravity Waves	198

<b>VIII. The Korteweg-deVries Equation : A Model Equation for Nonlinear Dispersive Waves <i>Robert M. Miura</i></b>	<b>212</b>
1. Conservation Laws and a Nonlinear Transformation	215
2. Method of Exact Solution	220
3. A Nonlinear WKB Method of Solution	227
<b>IX. Structure of Collisionless Shocks <i>Richard E. Meyer</i></b>	<b>235</b>
1. Steady Shocks	236
2. Sets of Limits	238
3. Double Asymptotics	242
4. Plasma Model	244
5. Stretching	247
6. Scale Conditions	251
7. Transients	254
8. Final Waveforms	259
<b>X. Wave Motion in Stratified Fluids <i>Chia-Shun Yih</i></b>	<b>263</b>
1. Waves of Small Amplitude	263
2. Waves of Finite Amplitude	275
3. Stability	281
<b>XI. Invariant Functionals of Nonlinear Equations of Evolution <i>Peter D. Lax</i></b>	<b>291</b>
1. Nonlinear Equations Associated with Linear Operators	294
2. Nonlinear Hyperbolic Systems of Conservation Laws	303
3. Nonlinear Wave Equations	308
