Chapter 1

SKYRMIONS AND CURRENT ALGEBRA 1

Chia-Hsiung Tze

INTRODUCTION	1
--------------	---

1. D=2 FERMI-BOSE CORRESPONDENCE	6
1.1 Dirac's Vacuum and the Algebra of Currents:	
the Jordon and Schwinger Models	6
1.2 The Massive Thirring & Sine-Gordon Models	12
1.3 Bosonizations & Kac-Moody Algebras	15
1.4 Algebraic & Topological Origins of the Equivalence	19
1.5 A Functional Bosonization of the Massive Thirring Model and the Fermionic Nature of the Skyrmion	27
2. D=4 FERMI-BOSE CORRESPONDENCE	33
2.1 Current Algebra and QCD	33
2.2 Global and Local Structure of Current Algebra	40
2.3 Bosonization Schemes	47
3. CODA	57
REFERENCES	58

Chapter 2

EFFECTIVE LAGRANGIANS FROM CHIRAL QUARK DYNAMICS 64

Lai-Him Chan

1. INTRODUCTION	65
2. THE MODELS	67
3. FORMULATION OF THE EFFECTIVE ACTION	70
4. DERIVATIVE EXPANSION FOR THE ONE-LOOP EFFECTIVE ACTION	73
5. QUARK-LOOP CONTRIBUTION TO THE GAUGED σ MODEL EFFECTIVE LAGRANGIAN	78

6. EFFECTIVE CURRENTS	85
7. NONLINEAR σ QUARK MODEL	87
8. SUMMARY AND PERSPECTIVE	93
REFERENCES	96

CHAPTER 3

STATIC PROPERTIES OF SKYRMIONS

Gregory S. Adkins

1. INTRODUCTION	100
2. CHIRAL FIELD THEORY	101
2.1 The Skyrme Lagrangian	101
2.2 Topological Solitons	104
2.3 Symmetries and Currents	106
3. THE SKYRMION	112
3.1 The Hedgehog	112
3.2 The Shape Function	115
3.3 The Rotating Soliton	120
4. QUANTIZATION	127
4.1 Quantization and Wave Functions	127
4.2 Matrix Elements	133
5. STATIC PROPERTIES	137
5.1 Masses	138
5.2 Sizes and Magnetic Moments	141
5.3 Electric and Magnetic Transition Elements	147
5.4 Axial Coupling and the Goldberger-Treiman Relation	150
5.5 More Results and Predictions	156
6. DISCUSSION AND CONCLUSIONS	159
APPENDIX A: NOTATION	160
APPENDIX B: PAULI MATRIX ALGEBRA	161
APPENDIX C: THE ADJOINT REPRESENTATION OF SU(2)	162
APPENDIX D: A FEW USEFUL FACTS	164
REFERENCES	167

CHAPTER 4	
PHENOMENOLOGY OF THE MESON-SKYRMION	
SYSTEM	171
<i>Michael P. Mattis</i>	
1. INTRODUCTION	171
2. LARGE N	173
3. OUTLINE OF FORMALISM	176
4. MODEL-INDEPENDENT LINEAR RELATIONS FOR $\pi N \rightarrow \pi N$ and $\pi N \rightarrow \pi \Delta$	182
5. THE BARYON SPECTRUM OF THE SKYRME MODEL	192
6. THE BIG-SMALL-SMALL-BIG PATTERN	203
7. SKYRMIONS AND VECTOR MESONS	204
8. FORMALISM FOR 3-FLAVOR SCATTERING	210
9. THE 3-FLAVOR SKYRME MODEL	215
REFERENCES	223
Chapter 5	
THE BARYON-BARYON INTERACTION IN	
THE SKYRME MODEL	225
<i>R. Vinh Mau</i>	
1. THE SKYRME MODEL	226
2. THE BARYON-BARYON INTERACTION	229
2.1 The Soliton-Soliton Interaction	230
2.2 The Static Nucleon-Nucleon Potential	233
2.3 The Nucleon-Delta Potential and the Transition Potential	234
2.4 Numerical Results	236
3. BEYOND THE SKYRME MODEL	238
3.1 The Symmetric Quartic Term	239
3.2 Contribution of the Symmetric Quartic Term to the Nucleon-Nucleon Potential	240
3.3 The ω Meson Term	243
4. EFFECTIVE LAGRANGIANS FOR LOW ENERGY HADRON PHYSICS	245
REFERENCES	253

Chapter 6**A CHIRAL QUARK SOLITON MODEL****255***Manoj K. Banerjee, Wojciech Broniowski, and Thomas D. Cohen*

1. INTRODUCTION	255
2. A SIMPLE CHIRAL QUARK-MESON MODEL	257
3. PROJECTING FROM THE HEDGEHOG	266
4. CRANKING THE HEDGEHOG	273
5. QCD AND THE QUARK-MESON THEORY	277
6. VECTOR MESONS	281
7. SMALL AMPLITUDE MOTION	294
8. A MODEL OF CONFINEMENT WITH GLUEBALLS	296
9. GLUEBALL AND THE BAG	300
10. CONCLUSION	306
APPENDIX A	307
REFERENCES	309

Chapter 7**EFFECTIVE LAGRANGIAN METHODS IN QCD****312***L. S. Celenza and C. M. Shakin*

1. INTRODUCTION	313
1.1 Length Scales in Quantum Chromodynamics	315
1.2 The Ginzburg-Landau Theory of Superconductivity	318
1.3 Order Parameters for QCD	321
2. SYMMETRY BREAKING IN GAUGE THEORIES	326
2.1 Symmetry Breaking and Symmetry Restoration	326
2.2 A Nuclear Physics Analogy	327
2.3 The Yang-Mills Field Coupled to Higgs Fields	331
2.4 An Effective Lagrangian for QCD	334
2.5 Dynamical Quark and Gluon Masses	339
2.6 Chiral Symmetry	343
3. COVARIANT SOLITON DYNAMICS	344
3.1 Analysis of the Field Equations	346
3.2 A Model of Nucleon Structure	347
3.3 A Model of Meson Structure	348

4. PRECURSORS OF A DECONFINEMENT PHASE TRANSITION	349
4.1 Properties of Nucleons in Nuclei	350
4.2 The EMC Effect	352
4.3 The Charge Distribution in Nuclei	352
4.4 Quasi-Elastic Electron Scattering	354
4.5 Temperature Dependence of Hadron Size	355
5. SUMMARY	356
REFERENCES	357

Chapter 8
THE NON-TOPOLOGICAL SOLITON BAG MODEL **362**
Lawrence Wilets

1. WHY A SOLITON MODEL?	362
2. THE MODEL	363
3. PARAMETERS OF THE MODEL	365
4. THE MEAN FIELD APPROXIMATION	366
5. SMALL AMPLITUDE OSCILLATIONS	370
6. QUANTUM ALTERNATIVES TO THE MEAN FIELD APPROXIMATION	373
6.1 The Coherent State	373
6.2 The General Single Model Approximation	376
7. RECOIL: PROJECTION AND BOOST	377
7.1 Momentum Projection	379
7.2 Boost	381
7.3 Variation After Projection	382
7.4 Virial Theorems	384
7.5 Numerical Results	385
8. THE GENERATOR COORDINATE METHOD	387
9. THE <i>N-N</i> INTERACTION	390
10. ONE GLUON EXCHANGE	393
10.1 Absolute Color Confinement	393
10.2 The String Constant	394
10.3 Is There a Color Van der Waals Problem?	395
10.4 The Linearized Gluon Propagator	396

11. THE PION AND DRESSING OF THE BARYONS	398
12. SUMMARY OF THE HADRON STATES CALCULATIONS	399
13. ONE LOOP QUANTUM CORRECTIONS	400
13.1 Dirac Sea Corrections	400
13.2 Soliton Field Quantum Corrections	401
14. WORK IN PROGRESS AND FUTURE DIRECTIONS	401
14.1 $N-\bar{N}$ Annihilation	401
14.2 The Many Bag Problem	402
REFERENCES	403

Chapter 9

QUANTIZATION OF THE SKYRME SOLITON	406
<i>Chun Wa Wong</i>	

Chapter 10

SKYRMION QUANTIZATION AND PHENOMENOLOGY	421
<i>Bing-An Li and Keh-Fei Liu</i>	

1. INTRODUCTION	422
2. QUANTIZATION OF SKYRMION	423
3. QUANTIZED EQUATION OF MOTION	429
4. ELECTROMAGNETIC MASS DIFFERENCES OF NUCLEONS AND DELTAS	441
5. SEVERAL NEW RESULTS	446
5.1 Goldberger-Treiman Relation in the Massive Pion Case	446
5.2 Mean Square Radius of $\pi-N-N$ Vertex	449
5.3 Mean Square Radius of Axial-Vector Form Factor	449
5.4 Mean Square Radii $\langle r^2 \rangle_{M,I=1}$ and $\langle r^2 \rangle_{M,I=0}$	452

Chapter 11

ROTATING SKYRMIONS IN A HAMILTONIAN FORMALISM	457
<i>Henri Verschelde</i>	

Chapter 12	
MODELING THE FIELD-THEORY SKYRMION	466
<i>John P. Ralston</i>	
1. PHYSICAL CONTENT OF THE MODEL	467
2. THE APPROACH	470
2.1 The Pionometer	470
2.2 The Large- F_π Limit	474
2.3 Elementary Quantum Mechanical Remarks	477
2.4 Problems of Asymptotic Expansions	480
2.5 Parameters Setting the Distributions	482
3. IMPLEMENTING THE APPROACH	485
3.1 The Hilbert Space	486
3.2 Field Shifts	487
3.3 In and Out States and Perturbation Theory	490
4. APPLICATIONS	494
4.1 The Electromagnetic Form Factor	494
4.2 Skyrme Partonology	499
5. CONSTRAINTS, CAVEATS AND CONCLUSIONS	502
REFERENCES	504
Chapter 13	
THE NUCLEON AS A PIONIC SOLITON	507
<i>M. Bolsterli and J. A. Parmentola</i>	
1. INTRODUCTION	508
2. THE SOLITON NUCLEON IN THE INTERNAL-FIELD APPROXIMATION	511
3. ELECTROMAGNETIC PROPERTIES OF THE NUCLEON	521
4. REMARKS	528
5. SUMMARY	530
APPENDIX A	530
REFERENCES	535

Chapter 14
MESON-SOLITON SCATTERING WITH
SOLITON RECOIL

537

J. A. Parmentola and I. Zahed

1. INTRODUCTION	538
2. THE METHOD OF CHRIST AND LEE VERSUS TOMBoulis	541
3. FREE MESON-SOLITON ASYMPTOTIC STATES	551
4. NON-RELATIVISTIC SOLUTIONS WITH SOLITON RECOIL	556
4.1 Solutions to the Bound State Problem	558
4.2 Solutions of the Scattering Problem	562
5. REMARKS	562
REFERENCES	564
