

CONTENTS

Foreword	V
Chapter 1	
Introduction and Notation	1
1.1 Introduction	1
1.2 Notation	7
Chapter 2	
Ergodicity	11
2.1 Anosov's result	11
2.2 Method of proof	14
2.3 Proof of Lemma 1	15
2.4 Proof of Lemma 2	23
Chapter 3	
On Frequency Systems and First Result for Two Frequency Systems ..	25
3.1 One frequency; introduction and first order estimates	25
3.2 Increasing the precision; higher order results	35
3.3 Extending the time-scale; geometry enters	42
3.4 Resonance; a first encounter	54
3.5 Two frequency systems; Arnold's result	56
3.6 Preliminary lemmas	58
3.7 Proof of Arnold's theorem	61
Chapter 4	
Two Frequency Systems; Neistadt's Results	67
4.1 Outline of the problem and results	67
4.2 Decomposition of the domain and resonant normal forms	71
4.3 Passage through resonance: the pendulum model	78
4.4 Excluded initial conditions, maximal separation, average separation	92
4.5 Optimality of the results	101
4.6 The case of a one-dimensional base	111
Chapter 5	
N Frequency Systems; Neistadt's Result Based on Anosov's Method ...	117
5.1 Introduction and results	117
5.2 Proof of the theorem	120
5.3 Proof for the differentiable case	126

Chapter 6

N Frequency Systems; Neistadt's Results Based on Kasuga's Method	133
6.1 Statement of the theorems	133
6.2 Proof of Theorem 1	135
6.3 Optimality of the results of Theorem 1	142
6.4 Optimality of the results of Theorem 2	148

Chapter 7

Hamiltonian Systems	153
7.1 General introduction	153
7.2 The KAM theorem	154
7.3 Nekhoroshev's theorem; introduction and statement of the theorem	161
7.4 Analytic part of the proof	164
7.5 Geometric part and end of the proof	173

Chapter 8

Adiabatic Theorems in One Dimension	183
8.1 Adiabatic invariance; definition and examples	183
8.2 Adiabatic series	199
8.3 The harmonic oscillator; adiabatic invariance and parametric resonance	205
8.4 The harmonic oscillator; drift of the action	212
8.5 Drift of the action for general systems	216
8.6 Perpetual stability of nonlinear periodic systems	222

Chapter 9

The Classical Adiabatic Theorems in Many Dimensions	229
9.1 Invariance of action, invariance of volume	229
9.2 An adiabatic theorem for integrable systems	230
9.3 The behavior of the angle variables	237
9.4 The ergodic adiabatic theorem	239

Chapter 10

The Quantum Adiabatic Theorem	249
10.1 Statement and proof of the theorem	249
10.2 The analogy between classical and quantum theorems	252
10.3 Adiabatic behavior of the quantum phase	257
10.4 Classical angles and quantum phase	262
10.5 Non-commutativity of adiabatic and semiclassical limits	265

Appendix 1	
Fourier Series	269
Appendix 2	
Ergodicity	277
Appendix 3	
Resonance	281
Appendix 4	
Diophantine Approximations	289
Appendix 5	
Normal Forms	293
Appendix 6	
Generating Functions	299
Appendix 7	
Lie Series	305
Appendix 8	
Hamiltonian Normal Forms	317
Appendix 9	
Steepness	329
Bibliography	339
Bibliographical Notes	351
Index	357
