

# Contents

<b>1. Introduction .....</b>	<b>1</b>
<b>2. Elements of the Theory of Finite Groups .....</b>	<b>4</b>
2.1 Symmetry and Group Concepts: A Basic Example .....	4
2.2 General Theorems on Group Theory .....	9
2.3 Conjugacy Classes .....	15
<b>3. Discrete Symmetry Groups .....</b>	<b>18</b>
3.1 Point Groups .....	18
3.1.1 Symmetry Elements .....	18
3.1.2 Proper Point Groups .....	21
3.1.3 Improper Point Groups .....	23
3.2 Colour Groups and Magnetic Groups .....	26
3.3 Double Groups .....	29
3.4 Lattices, the Translation Group and Space Group .....	33
3.4.1 Normal Space Groups .....	33
3.4.2 Colour and Magnetic Space Groups .....	38
3.4.3 Double Space Groups .....	39
3.5 Permutation Groups .....	41
3.6 Other Finite Groups .....	45
<b>4. Representations of Finite Groups.....</b>	<b>47</b>
4.1 Linear Spaces and Operators .....	47
4.1.1 Linear and Unitary Spaces .....	47
4.1.2 Linear Operators .....	51
4.1.3 Special Operators and Eigenvalues .....	54
4.2 Introduction to the Theory of Representations .....	57
4.2.1 Operator Representations by Matrices .....	57
4.2.2 Equivalent Representations and Characters .....	61
4.2.3 Reducible and Irreducible Representations .....	63
4.2.4 Orthogonality Theorems .....	66
4.2.5 Subduction. Reality of Representations .....	71
4.3 Group Algebra .....	73
4.3.1 The Regular Representation .....	73
4.3.2 Projection Operators .....	75

<b>4.4 Direct Products .....</b>	<b>79</b>
4.4.1 Representations of Direct Products of Groups .....	79
4.4.2 The Inner Direct Product of Representations of a Group. Clebsch-Gordan Expansion .....	82
4.4.3 Simply Reducible Groups .....	84
<b>5. Irreducible Representations of Special Groups .....</b>	<b>87</b>
5.1 Point and Double Point Groups .....	87
5.2 Magnetic Point Groups. Time Reversal .....	91
5.3 Translation Groups .....	95
5.4 Permutation Groups .....	98
5.5 Tensor Representations .....	107
5.5.1 Tensor Transformations. Irreducible Tensors .....	107
5.5.2 Induced Representations .....	113
5.5.3 Irreducible Tensor Spaces .....	114
5.5.4 Direct Products and Their Reduction .....	121
<b>6. Tensor Operators and Expectation Values .....</b>	<b>126</b>
6.1 Tensors and Spinors .....	126
6.2 The Wigner-Eckart Theorem .....	129
6.3 Eigenvalue Problems .....	132
6.4 Perturbation Calculus .....	135
<b>7. Molecular Spectra .....</b>	<b>139</b>
7.1 Molecular Vibrations.....	139
7.1.1 Equation of Motion and Symmetry .....	139
7.1.2 Determination of Eigenvalues and Eigenvectors .....	144
7.1.3 Selection Rules .....	154
7.2 Electron Functions and Spectra.....	156
7.2.1 Symmetry in Many-Particle Systems .....	156
7.2.2 Symmetry-Adapted Atomic and Molecular Orbitals .....	159
7.2.3 The Hückel Method and Ligand Field Theory.....	165
7.3 Many-Electron Problems.....	171
7.3.1 Permutation Symmetry .....	171
7.3.2 Point and Permutation Symmetry. Molecular States .....	175
7.3.3 The $H_2$ Molecule .....	179
<b>8. Selection Rules and Matrix Elements .....</b>	<b>183</b>
8.1 Selection Rules of Tensor Operators.....	183
8.2 The Jahn-Teller Theorem .....	184
8.2.1 Spinless States .....	184
8.2.2 Time Reversal Symmetry .....	186
8.3 Radiative Transitions .....	188
8.4 Crystal Field Theory .....	191
8.4.1 Crystal Field Splitting of Energy Levels .....	191
8.4.2 Calculation of Splitting .....	193
8.5 Independent Components of Material Tensors .....	198

<b>9. Representations of Space Groups.....</b>	<b>203</b>
9.1 Representations of Normal Space Groups .....	203
9.1.1 Decompositions into Cosets .....	203
9.1.2 Induction of the Representations of $\mathcal{R}$ .....	206
9.2 Allowable Irreducible Representations of the Little Group $\mathcal{G}_k$	208
9.2.1 Projective Representations. Representations with a Factor System for $\mathcal{G}_{0k} = \mathcal{G}_k/\mathbb{T}$ .....	208
9.2.2 Vector Representations of the Group $\mathcal{S}_k = \mathcal{G}_k/\mathbb{T}_k$ .....	215
9.2.3 Representations of Double Space Groups. Spinor Representations.....	218
9.3 Projection Operators and Basis Functions .....	221
9.4 Representations of Magnetic Space Groups .....	222
9.4.1 Corepresentations of Magnetic Space Groups .....	222
9.4.2 Time Reversal Symmetry in $\mathcal{M}_II$ Groups .....	224
<b>10. Excitation Spectra and Selection Rules in Crystals.....</b>	<b>230</b>
10.1 Spectra – Some General Statements .....	230
10.1.1 Bands and Branches .....	230
10.1.2 Compatibility Relations .....	232
10.2 Lattice Vibrations .....	235
10.2.1 Equation of Motion and Symmetry Properties .....	235
10.2.2 Vibrations of the Diamond Lattice .....	239
10.3 Electron Energy Bands .....	244
10.3.1 Symmetrization of Plane Waves .....	244
10.3.2 Energy Bands and Atomic Levels .....	250
10.4 Selection Rules for Interactions in Crystals .....	252
10.4.1 Determination of Reduction Coefficients .....	252
10.4.2 General Selection Rules .....	256
10.4.3 Electron-Phonon Interaction .....	256
10.4.4 Electron-Photon Interaction: Optical Transitions .....	259
10.4.5 Phonon-Photon Interaction .....	261
<b>11. Lie Groups and Lie Algebras .....</b>	<b>266</b>
11.1 General Foundations .....	266
11.1.1 Infinitesimal Generators and Defining Relations .....	266
11.1.2 Algebra and Parameter Space .....	273
11.1.3 Casimir Operators .....	277
11.2 Unitary Representations of Lie Groups .....	279
11.3 Clebsch-Gordan Coefficients and the Wigner-Eckart Theorem .....	284
11.4 The Cartan-Weyl Basis for Semisimple Lie Algebras.....	287
11.4.1 The Lie Group $\mathcal{SU}(n, \mathbb{C})$ and the Lie Algebra $A_{n-1}$ .....	287
11.4.2 The Cartan-Weyl Basis .....	295
<b>12. Representations by Young Diagrams. The Method of Irreducible Tensors .....</b>	<b>311</b>

<b>13. Applications of the Theory of Continuous Groups .....</b>	<b>318</b>
13.1 Elementary Particle Spectra .....	318
13.1.1 General Remarks .....	318
13.1.2 Hadronic States .....	321
13.1.3 Colour States of Quarks .....	330
13.1.4 A Possible $SU(4)$ Classification .....	333
13.2 Atomic Spectra .....	336
13.2.1 Russell-Saunders ( $LS$ ) Coupling .....	336
13.2.2 $jj$ Coupling .....	339
13.3 Nuclear Spectra .....	340
13.3.1 $jj-JI$ Coupling .....	341
13.3.2 $LSI$ Coupling .....	342
13.4 Dynamical Symmetries of Classical Systems .....	345
<b>14. Internal Symmetries and Gauge Theories .....</b>	<b>350</b>
14.1 Internal Symmetries of Fields .....	350
14.2 Gauge Transformations of the First Kind .....	354
14.2.1 $U(1)$ Gauge Transformations .....	354
14.2.2 $SU(n)$ Gauge Transformations .....	356
14.3 Gauge Transformations of the Second Kind .....	358
14.3.1 $U(1)$ Gauge Transformations of the Second Kind ..	358
14.3.2 $SU(n)$ Gauge Transformations of the Second Kind ..	362
14.3.3 A Differential Geometric Discussion of the Yang-Mills Fields .....	369
14.4 Gauge Theories with Spontaneously Broken Symmetry .....	372
14.4.1 General Remarks .....	372
14.4.2 Spontaneous Breaking of a Gauge Symmetry of the First Kind: Goldstone Model .....	374
14.4.3 Spontaneous Breaking of an Abelian Gauge Symmetry of the Second Kind: Higgs-Kibble Model ..	376
14.5 Non-Abelian Gauge Theories and Symmetry Breaking .....	379
14.5.1 The Glashow-Salam-Weinberg Model of the Electro-Weak Interaction .....	379
14.5.2 Symmetry Breaking in the Glashow-Salam-Weinberg Model .....	383
14.5.3 Grand Unified Theories: General Remarks .....	389
14.5.4 $SU(5)$ Group and Georgi-Glashow Model .....	391
14.5.5 Some Consequences of $SU(5)$ Theory .....	400
<b>Appendices .....</b>	<b>406</b>
A. Character Tables .....	406
B. Representations of Generators .....	414
C. Standard Young-Yamanouchi Representations of the Permutation Groups $P_3 - P_5$ .....	417
D. Continuous Groups .....	419

E. Stars of $k$ and Symmetry of Special $k$ -Vectors .....	421
F. Noether's Theorem .....	422
G. Space-Time Symmetry .....	424
G.1 Canonical Transformations and Algebra .....	424
G.2 The Galilei Group and Classical Mechanics .....	428
G.3 Lorentz and Poincaré Groups .....	430
G.4 The Physical Quantities .....	435
H. Goldstone's Theorem .....	437
I. List of Symbols and Abbreviations .....	440
 <b>References</b> .....	445
 <b>Additional References</b> .....	451
 <b>Subject Index</b> .....	453
