

CONTENTS

Preface	v
CHAPTER 1 Ordinary Differential Equations	I
1-1 Solution in closed form	I
1-2 Power-series solutions	12
1-3 Miscellaneous approximate methods	21
1-4 The WKB Method	26
CHAPTER 2 Infinite Series	43
2-1 Convergence criteria	43
2-2 Familiar series	46
2-3 Transformation of series	48
CHAPTER 3 Evaluation of Integrals	56
3-1 Elementary methods	56
3-2 Use of symmetry arguments	59
3-3 Contour integration	63
3-4 Tabulated integrals	71
3-5 Approximate expansions	75
3-6 Saddle-point methods	78
CHAPTER 4 Integral Transforms	91
4-1 Fourier series	91
4-2 Fourier transforms	96
4-3 Laplace transforms	102
4-4 Other transform pairs	104
4-5 Applications of integral transforms	105

CHAPTER 5	Further Applications of Complex Variables	118
5-1	Conformal transformations	118
5-2	Dispersion relations	123
CHAPTER 6	Vectors and Matrices	134
6-1	Linear vector spaces	134
6-2	Linear operators	136
6-3	Matrices	138
6-4	Coordinate transformations	142
6-5	Eigenvalue problems	145
6-6	Diagonalization of matrices	153
6-7	Spaces of infinite dimensionality	155
CHAPTER 7	Special Functions	162
7-1	Legendre functions	162
7-2	Bessel functions	171
7-3	Hypergeometric function	180
7-4	Confluent hypergeometric functions	186
7-5	Mathieu functions	189
7-6	Elliptic functions	196
CHAPTER 8	Partial Differential Equations	208
8-1	Examples	208
8-2	General discussion	210
8-3	Separation of variables	218
8-4	Integral transform methods	228
8-5	Wiener–Hopf method	234
CHAPTER 9	Eigenfunctions, Eigenvalues, and Green's Functions	248
9-1	Simple examples of eigenvalue problems	248
9-2	General discussion	250
9-3	Solutions of boundary-value problems as eigenfunction expansions	254
9-4	Inhomogeneous problems. Green's functions	255
9-5	Green's functions in electrodynamics	265
CHAPTER 10	Perturbation Theory	273
10-1	Conventional nondegenerate theory	273
10-2	A rearranged series	279
10-3	Degenerate perturbation theory	280

CHAPTER 11	Integral Equations	285
11-1	Classification	285
11-2	Degenerate kernels	286
11-3	Neumann and Fredholm series	288
11-4	Schmidt–Hilbert theory	292
11-5	Miscellaneous devices	297
11-6	Integral equations in dispersion theory	299
CHAPTER 12	Calculus of Variations	304
12-1	Euler–Lagrange equation	304
12-2	Generalization of the basic problem	309
12-3	Connections between eigenvalue problems and the calculus of variations	315
CHAPTER 13	Numerical Methods	327
13-1	Interpolation	327
13-2	Numerical integration	331
13-3	Numerical solution of differential equations	335
13-4	Roots of equations	338
13-5	Summing series	341
CHAPTER 14	Probability and Statistics	349
14-1	Introduction	349
14-2	Fundamental probability laws	350
14-3	Combinations and permutations	352
14-4	The binomial, Poisson, and Gaussian distributions	354
14-5	General properties of distributions	357
14-6	Fitting of experimental data	361
CHAPTER 15	Tensor Analysis and Differential Geometry	374
15-1	Cartesian tensors in three-space	374
15-2	Curves in three-space; Frenet formulas	380
15-3	General tensor analysis	382
CHAPTER 16	Introduction to Groups and Group Representations	396
16-1	Introduction; definitions	396
16-2	Subgroups and classes	399
16-3	Group representations	401
16-4	Characters	404
16-5	Physical applications	412
16-6	Infinite groups	421
16-7	Irreducible representations of $SU(2)$, $SU(3)$, and $O^+(3)$	430

APPENDIX	Some Properties of Functions of a Complex Variable	445
A-1	Functions of a complex variable. Mappings	445
A-2	Analytic functions	451
Bibliography		459
Index		465
