Contents

I BASICS

Chapter 1 The Nature of Optimization Problems **3**

1.1 General Remarks, 3
1.2 Characteristics of Optimization Problems, 9
1.3 Mathematical Structure of Optimization Problems, 21
Problems, 24

Chapter 2 Analytical Background **28**

2.1 Fundamentals of Analysis, 28
2.2 Convexity, 38
2.3 Optimality Conditions for Unconstrained Problems, 56
2.4 Matrix Theory, 60
Problems, 71

Chapter 3 Factorable Functions **76**

3.1 Computationally Oriented Way of Representing Nonlinear Functions, 76
3.2 First and Second Derivatives, 78
3.3 Use in Matrix Methods, 84
3.4 Other Uses of Factorable Functions, 87
Problems, 88

II UNCONSTRAINED PROBLEMS

Chapter 4 Unconstrained Optimization Models **93**

4.1 Parameter Estimation, 93

4.2 Application to Solutions of Nonlinear Equations, 104
Problems, 106

Chapter 5 Minimizing a Function of a Single Variable **109**

5.1 Newton's Method, 109
5.2 Methods Using First Derivatives, 116
5.3 Methods That Use Only Function Values, 120
5.4 Modified Method of Golden Sections, 125
Problems, 129

Chapter 6 General Convergence Theory for Unconstrained Minimization Algorithms **132**

6.1 Step-Size Procedures, 132
Problems, 141

Chapter 7 Newton's Method With Variations **143**

7.1 A Cauchy–Newton Approach to Unconstrained Minimization, 143
7.2 Local Convergence and Rate of Convergence Results for Newton's Method, 147
7.3 Global Convergence Using Directions of Negative Curvature, 149
7.4 General Algorithm for Computing an Estimate of the Positive Part and Directions of Nonpositive and Negative Curvature When the Hessian Matrix Is Given in Dyadic Form, 153
7.5 Linear Algebra Required for UU^T Updating, 157
7.6 Specific Realization of an Algorithm for Computing the Positive Part and Directions of Nonpositive Curvature, 160
7.7 Convergence of the Modified Newton Method, 161
7.8 Survey of Modified Newton Algorithms, 163
Problems, 167

Chapter 8 Conjugate Direction Algorithms **169**

8.1 Motivation and General Statement, 169
8.2 The Conjugate Gradient Method, 171
8.3 The Projection Method, 176
Problems, 178

Chapter 9 Quasi-Newton Methods 180

9.1 The Secant Method for Minimizing Functions of Several Variables, 180
9.2 Methods That Save Old Information, 185
9.3 Single-Step Convergence Rate, 199
Problems, 202

III OPTIMALITY CONDITIONS FOR CONSTRAINED PROBLEMS

Chapter 10 First- and Second-Order Optimality Conditions 207

10.1 Preliminary Results, 207
10.2 First-Order Necessary Conditions, 210
10.3 Second-Order Necessary Conditions, 218
10.4 Second-Order Sufficiency Conditions, 222
10.5 Nonrigorous Development of the Optimality Conditions, 227
Problems, 236

Chapter 11 Applications of Optimality Conditions 240

11.1 Algorithmic Motivation, 240
11.2 Rate of Convergence of Algorithms, 243
11.3 Sensitivity Analysis, 244
Problems, 249

IV LINEARLY CONSTRAINED PROBLEMS

Chapter 12 Models with Linear Constraints 253

12.1 Chemical Equilibrium, 253
12.2 An Inventory Problem, 254

Chapter 13 Variable-Reduction Algorithms 259

13.1 Introduction, 259
13.2 Null-Space Computation, 264
13.3 Subspace Determination, 270
13.4 Termination Strategies, 272
13.5 General Algorithm for the Linearly Constrained Problem, 276
13.6 Matrix Methods for Linearly Constrained Problems, 282
Problems, 289

V NONLINEARLY CONSTRAINED PROBLEMS

Chapter 14 Models with Nonlinear Constraints **297**

14.1 Engineering Design, 297
14.2 Water Pollution Control, 299

Chapter 15 Direct Algorithms for Nonlinearly Constrained Problems **308**

15.1 Introduction, 308
15.2 Derivation of a Natural Arc Method, 309
15.3 Variable-Reduction Methods for the Nonlinear Equality-Constrained Problem, 314
15.4 Complete General Algorithm for the Nonlinearly Constrained Problem, 316
Problems, 327

Chapter 16 Sequential Unconstrained Minimization Techniques **329**

16.1 Logarithmic Barrier Function Method, 329
16.2 Quadratic Loss Penalty Function Method, 333
16.3 Extrapolation and Duality, 335
16.4 Convergence Theory for Barrier and Penalty Functions, 342
16.5 An Idealized Exact Penalty Function, 346
16.6 Exact Penalty Function Methods, 358
16.7 Multiplier Methods, 366
Problems, 370

Chapter 17 Sequential Constraint Linearization Techniques **374**

17.1 Derivation of a Class of Sequential Linearly Constrained Problems, 374
17.2 Extensions to Inequality Constraints, 381
Problems, 383

VI OTHER TOPICS

Chapter 18 Obtaining Global Solutions **387**

18.1 Introduction, 387
18.2 Outline of the Global Solution Method, 388
18.3 Procedure for Creating Convex Underestimating Programs, 389
18.4 Local/Global Verification, 403
Problems, 414

Chapter 19 Geometric Programming 417

19.1 Primal and Dual Geometric Programming Problems, 417
Problems, 424
