

## CONTENTS

INTRODUCTION	1
§1. Some Concepts and Definitions . . . . .	1
§2. Lagrange's Equations of the Second Kind . . . . .	3
§3. Multiple Fourier Series in Complex Form . . . . .	13
SECTION 1: Investigation of Nonstationary Monofrequency Modes of Vibration in Systems with N Degrees of Freedom . . . . .	15
§1. The Monofrequency Principle in the Investigation of Vibrations . . . . .	15
§2. Construction of Asymptotic Approximations of the Solutions in the Investigation of Monofrequency Vibrational Modes . . . . .	16
1. The Perturbed and the Corresponding Unperturbed System of Solutions, and the Integration of the Latter . . . . .	16
2. Construction of Asymptotic Solutions of the Perturbed System. First Approximations of the Solution, Equations of the First Approximation, and Their Integration . . . . .	18
3. The Form of the Equations of the First Approximation in the Case of a Linear Perturbed System, and the Integration of These Equations . . . . .	23
§3. The Energy Method of Constructing the Asymptotic Approximations of the Solutions . . . . .	24
1. The Average Virtual Work of the Perturbing Forces and the Equations of the First Approximation . . . . .	24
2. The Case of the Potential Perturbing Forces . . . . .	26
SECTION 2: Investigation of Nonstationary Monofrequency Modes of Vibration in Systems with Distributed Parameters . . . . .	27
§1. General Concepts . . . . .	27
§2. Transverse Vibration of a Rod Subjected to the Action of a Longitudinal Sinusoidal Force of Variable Frequency . . . . .	28
1. Equations of Unperturbed Motion. Eigenfrequencies and Corresponding Forms of Dynamic Equilibrium . . . . .	28
2. The First Approximation of the Solution of the Equations of Perturbed Motion, and the Equations of the First Approximation . . . . .	31
3. Analysis of the Equations of the First Approximation. Numerical Illustration . . . . .	32
§3. Transverse Vibration of a Rod Subjected to the Action of a Moving Load and a Pulsating Force . . . . .	34
1. The Equations of Unperturbed Motion, the Eigenfrequencies, and the Forms of the Normal (Principal) Vibrations . . . . .	34
2. Solution of the First Approximation for Perturbed Motion. The Equations of the First Approximation and Their Integration . . . . .	35
3. Numerical Example for the Case of the Transition through the Principal Resonance . . . . .	37
§4. Transverse Vibration of a Rod of Double-Valued Rigidity in a Transitional Rotational Mode . . . . .	38
1. Statement of the Problem. Equations of Unperturbed Motion. Eigenfrequencies and the Forms of Normal Modes . . . . .	38

2. The Solution in the First Approximation and the Equations of the First Approximation for the Perturbed Motion	43
3. Other Methods for Obtaining the Equations of the First Approximation of the Perturbed Motion	49
4. The Analysis of the Equations of the First Approximation. Stability of Vibration of a Statically Balanced Rod. Stationary Amplitudes of Forced Vibration of a Statically Unbalanced Rod	51
5. Transitional Rotational Mode. Integration of the Equations of the First Approximation . . . . .	53
6. Transition through the Resonance Zone of a Statically Unbalanced Rod (Numerical Examples). Conclusion	54
§5. The Generalization of the Method of Investigation of the Monofrequency Modes for Transverse Vibrations of Rods Subjected to the Action of a Given Quasiperiodic Axial Force and for Various End Supports . . . . .	57
1. Equation of the Perturbed Motion and the Equations of the First Approximation for the L Boundary Conditions . . . . .	57
2. Investigation of the Phenomenon of Demultiplicative Resonance. The Instability Zone of Vibrations	62
3. The Application of the Analytical Formulas to Numerical Examples . . . . .	65
4. The Determination of the Amplitudes in the Transitional Mode of Vibration . . . . .	67
§6. The Nonstationary Mode of Transverse Vibration of a Turbine Blade, Taking into Account the Dissipation of Energy in the Material . . . . .	67
1. Statement of the Problem and Basic Differential Equations for the Vibration of a Blade . . . . .	67
2. The Equation of Unperturbed Motion and Its Integration . . . . .	70
3. The Solution of the Equation of Perturbed Motion in the First Approximation. The Equations of the First Approximation . . . . .	73
4. The Determination of Bending Moments $\bar{M}$ in the Blade's Cross Section . . . . .	76
5. The Stationary Mode of Vibration, Taking into Account the Dissipation of Energy in the Material of a Turbine Blade . . . . .	77
6. Numerical Example of the Construction of the Resonance Curves for the Amplitudes in the Stationary and Transitional Modes of Vibration . . . . .	78
§7. Transverse-Torsional Vibration of Rods, Taking into Account Internal Friction . . . . .	83
1. Statement of the Problem and the Basic System of Differential Equations of Perturbed Motion . . . . .	83
2. The Equations of Unperturbed Motion. The Eigenfrequencies and the Forms of the Normal Vibrations	87
3. Solution of the Equation of Perturbed Motion in the First Approximation. Equations of the First Approximation	90
4. A Numerical Example for the Construction of the Resonance Curves for the Amplitudes in the Stationary Vibrational Mode of a Cantilever Beam of I Cross Section . . . . .	95
§8. Asymptotic Expansion for Nonlinear Differential Equations Close to the Hyperbolic Type . . . . .	97
BIBLIOGRAPHY	101
