

Table of Contents

<u>Chapter I - Introduction</u>	13
Historical Review - Widening of the Invariance Group of the Laws of Nature.	
Need for Invariance Under Arbitrary Space-Time Transformations	
<u>Chapter II - Short Outline of the Formal Aspects of the General Theory of Relativity</u>	25
Principle of Equivalence	
Standard Measuring Rods and Clocks	
The Spatial Metric	
Measurement of Time	
<u>Chapter III - Equations of Motion of a Test Particle in the Gravitational Field</u>	37
<u>Chapter IV - Equations of Motion (continued) - The Red Shift- - -</u>	42
Photon Equations of Motion	
Emission of a Photon - Red Shift	
<u>Chapter V - Definition of Standard Quantities - - - - -</u>	50
Standard Velocity	
<u>Chapter VI - Gauge-Invariant Form of the Equations of Motion- - -</u>	59
<u>Chapter VII - Gauge-Invariant Form of the Equations of Motion (continued)</u>	66
Analogy with Electromagnetic Gauge Invariance	
The Rate of Change of Kinetic Energy	

<u>Chapter VIII - The Mössbauer Effect</u>	73
<u>Chapter IX - Energy-Momentum Conservation Laws in the General Theory of Relativity</u>	80
Contrast Between the Special and the General Theory	
Variational Principles Leading to the Field Equations	
Conservation Laws and Energy-Momentum Complexes	
<u>Chapter X - Infinitesimal Coordinate Transformations and Conservation Laws - - - - -</u>	94
Some Mathematical Preliminaries	
Identities Following from an Invariant Variational Principle	
The Gravitational Case	
<u>Chapter XI - Criteria for the Choice of an Energy-Momentum Complex I: The Complex <math>\Theta_i^k</math></u>	106
<u>Chapter XII - Criteria for the Choice of an Energy-Momentum Complex II: The Complex <math>T_i^k</math></u>	115
Difficulties with $T_i^k$
