Contents

Introduction: Weak Nonlinearity and Dispersion 1

CHAPTER I
THE INVERSE SCATTERING METHOD 11

1 Elements of the Scattering Theory. The Inverse Problem in the Quantum Theory of Scattering 12
2 Integration of the KdV by the Inverse Scattering Method 23
3 Reflectionless Potentials and N-Soliton Solutions 26
4 The KdV as a Hamiltonian System 32
5 Polynomial Integrals of Motion 35
6 Complete Integrability of the KdV. Higher Order KdV 37
7 Differential-Difference Systems 45
8 Nonlinear Schrödinger Equation and Sine-Gordon Equation 57
9 Inverse Scattering Problem for a System of Two Differential Equations 61
10 Nonlinear Schrödinger Equation 68
11 The Sine-Gordon Equation 79

CHAPTER II
PERIODIC SOLUTIONS OF THE KdV EQUATION 91

1 Schrödinger Equation with a Periodic Potential. Periodic Analog of the Gardner-Greene-Kruskal--Miura (GGKM) Equation 91
2 Stationary Problem for Higher Order KdV. Exact Solutions of the KdV 97
3 Stationary Solutions of Higher Order KdV and the Potentials of a Schrödinger Equation with a Finite Number of Bands. Riemann Surfaces 104
4 Analytical Properties of the Bloch Eigenfunction of a Finite-Gap Potential on a Riemann Surface 108
5 Some Applications 112

6 Elements of the Theory of Riemann Surfaces. Cycles on Riemann Surface 120
7 Differentials on Riemann Surfaces. Abelian (Holomorphic) Differentials and Differentials with Poles 130
8 The Bloch Eigenfuntion and Quasi-Momentum. Associated Differentials on the Riemann Surface and Their Dynamics 138
9 Exact Expressions for Finite-Gap Potentials and Solutions of the KdV 146
10 Certain Particular Solutions of the KdV 149

CHAPTER III
CONSTRUCTION OF INTEGRABLE SYSTEMS AND THEIR SOLUTIONS: MODERN METHODS 154

1 Regular Riemann Problem 154
2 Riemann Problem with Zeros 157
3 The Inverse Scattering Problem for a First-Order Matrix System 163
4 The N-Wave Problem 174
5 Soliton Solutions 180
6 Systems Integrable by Riemann Problem Technique 184
7 Relativistic-Invariant Systems - Chiral Fields 189

CHAPTER IV
ASYMPTOTIC SOLUTIONS OVER LARGE TIMES 205

1 Integral Relationships. Nonlinear Fraunhofer Diffraction 206
2 Explicit Expressions of Asymptotic Forms (the Nonlinear Schrödinger Equation) 210
3 Explicit Expressions of Asymptotic Forms (the KdV Equation) 215
4 The Whitham Averaging Method 219

APPENDIX
THE THEORY OF KADOMTSEV-PETVIASHVILI EQUATION (TWO-DIMENSIONAL KdV). CERTAIN DISCRETE SYSTEMS 240

1 Certain Integrable Two-Dimensional Systems 240
2 Conservation Laws 244
3 The Dressing Method 245
4 Soliton-Like Solutions of the KP 248
5 Exact Solutions Dependent on Functional Parameters 251
6 Riemann Surface Technique. Finite-Gap Solutions of Rank 1 253

7 Rational Solutions of the KP. Discrete Systems of Particles on a Line 256
8 The Method of Holomorphic Vector Bundles Over Riemann Surfaces. Functional Parameters in Exact Solutions 259
9 Certain Remarks on the Periodic Toda Lattice 265
