CHAPTER I    EXISTENCE AND UNIQUENESS FOR THE INITIAL VALUE PROBLEM UNDER THE HYPOTHESIS OF LIPSCHITZ	1
1.    General Results	1
1.1    Definitions	1
1.2    Geometrical Interpretation	3
1.3    Functions Satisfying a Lipschitz Condition	4
1.4    Existence Theorem	5
1.5    Uniqueness Theorem	10
1.6    Continuous Dependence on Initial Conditions and Parameters	12
1.7    Interval of Definition and Extension of Solutions	13
1.8    Gronwall's Lemma	17
1.9    Application of Gronwall's Lemma to the Cauchy Problem	19
2.    Qualitative Properties of Solutions	23
2.1    Differentiability of Solutions	23
2.2    Analyticity of the Solutions	24
3.    Solutions as Functions of the Initial Data	29
3.1    Differentiability with Respect to the Parameter	30
3.2    Differentiability with Respect to the Initial Point	32
3.3    Higher Order Differentiability and Analyticity	39
3.4    Remark about a More General Point of View	40
4.    Systems of Equations as Particular Transformations Between Function Spaces	40
4.1    Review of Metric Spaces	41
4.2    Review of Banach Spaces	47
4.3    The Cauchy Problem and Fixed Points of Certain Transformations in Banach Spaces	52
5.    Exercises	56
5.1    Variables Separable Equations	56
5.2    Equations Reducible to Separable Equations	57
5.3    Linear Equations of the First Order	59
5.4    Linear Equations of Order Higher than the First with Constant Coefficients	59
5.5    Euler Equations	61
5.6    Envelopes and Differential Equations	61
5.7    Various Exercises	63
5.8    Selected Exercises	64
6.    Bibliographical Notes	75

	Page
CHAPTER II    LINEAR SYSTEMS	79
1. Elements of Linear Algebra	79
1.1 Matrices and Eigenvalues	79
1.2 Linear Operators Between Banach Spaces	84
1.3 Canonical Form of Matrices	88
1.4 Spectrum and Eigenvalues of a Linear Operator	93
1.5 Limits of Operators	94
2. Linear Systems of Ordinary Differential Equations	97
2.1 Formal Solution of Linear Systems	97
2.2 Fundamental Systems of Solutions and Adjoint Systems	99
2.3 Nonhomogeneous Systems	102
3. Operational Calculus	103
3.1 Analytic Functions of Operators	103
3.2 Linear Systems with Constant Coefficients	110
4. Linear Finite Differences Equations	118
4.1 Homogeneous Linear Finite Differences Equations	118
4.2 Nonhomogeneous Linear Finite Differences Equations	124
5. Examples	124
6. Bibliography	131
CHAPTER III    EXISTENCE AND UNIQUENESS FOR THE CAUCHY PROBLEM UNDER THE CONDITION OF CONTINUITY	132
1. Existence Theorem	133
1.1 Characterization of Compact Sets of Continuous Functions: Ascoli's Theorem	133
1.2 Local Existence	140
1.3 Global Existence	146
2. The Peano Phenomenon	155
2.1 Approximation of all Solutions to a Given Cauchy Problem	156
2.2 Maximal and Minimal Solutions. The Peano Phenomenon	159
2.3 The Peano Phenomenon for Systems	162
2.4 Maximal Solutions, Differential Inequalities, and Global Existence	168
3. Questions of Uniqueness	171
3.1 Continuous Dependence	171
3.2 Uniqueness Theorems	178
3.3 How Many Differential Equations Have the Uniqueness Property?	183
4. Elements of G-Convergence	187
4.1 Introduction	187
4.2 G-Convergence for Equations Satisfying the Lipschitz Condition	187
4.3 Homogenization	189
4.4 G-Compactness	196
4.5 G-Convergence and the Peano Phenomenon	198
5. Bibliographical Notes	200

	Page
CHAPTER IV BOUNDARY VALUE PROBLEMS	207
1. Continuous Mappings on Euclidean Spaces	207
1.1 The Topological Degree	208
1.2 The Theorems of Brouwer and Miranda	213
2. Geometric Boundary Value Problems	217
2.1 The Boundary Value Problems of Picard and Nicoletti	217
2.2 A Geometrical Formulation of the Boundary Value Problem	224
2.3 Some Applications of the Geometric Formulation	233
3. Sturm-Liouville Problems: Eigenvalues and Existence and Uniqueness Theorems	236
3.1 Eigenvalues and Eigenfunctions	236
3.2 Prüfer's Change of Variables	239
3.3 Existence and Properties of the Eigenvalues	247
3.4 Applications to Questions of Uniqueness for Problems Involving Nonlinear Equations	251
3.5 Application to the Existence of Solutions for Problems Involving Nonlinear Equations	254
3.6 Further Properties of Eigenvalues and Eigenfunctions	261
4. Periodic Solutions	265
4.1 The Case of First Order Equations	265
4.2 The Case of Second Order Equations	268
4.3 The Case of Systems	272
4.4 On the Structure of Periodic Solutions	279
5. Functional Boundary Value Problems	284
5.1 Linear Functional Problems	286
5.2 Nonlinear Functional Problems	296
6. Bibliographical Notes	299
CHAPTER V QUESTIONS OF STABILITY	311
1. Stability of the Solutions of Linear Systems	312
1.1 Definition of Stability	312
1.2 Stability for Autonomous Linear Systems	314
1.3 Autonomous Linear Systems of the Second Order	317
1.4 Certain Stability Problems for Nonautonomous Linear Systems	325
2. Some Methods for the Determination of the Stability of Nonlinear Systems	332
2.1 Definitions	332
2.2 Liapunov's Method	337
2.3 The Fixed Point Method: Asymptotic Equivalence	346
2.4 Olech's Method	352
2.5 The Method of the Logarithmic Norm	358
2.6 Invariant Sets	361
3. Some Applications	365
3.1 Problems in Biology and Chemistry	365
3.2 Problems in Automatic Control Theory	370

	Page
CHAPTER V (cont.)	
4. The Method of Runge and Kutta	373
4.1 The Fourth Order Runge-Kutta Algorithm	374
4.2 Practical Use of the Runge-Kutta Method	376
5. Bibliographical Notes	378
INDEX	382
