

CONTENTS

INTRODUCTION	v
Reactor Types By ALVIN M. WEINBERG	1
Neutron Thermalization By M. S. NELKIN	20
Deep Penetration of Radiation By U. FANO and M. J. BERGER	43
The Theory of Resonance Absorption By L. W. NORDHEIM	58
Mathematical Problems of Nuclear Reactor Theory By EUGENE P. WIGNER	89
Diffusion Approximation to the Transport Equation By J. ERNEST WILKINS, Jr.	105
Positivity and Criticality By GARRETT BIRKHOFF	116
Existence Theorems and Spectral Theory for the Multigroup Diffusion Model By G. J. HABETLER and M. A. MARTINO	127
Transport Theory and Spectral Problems By G. MILTON WING	140
One-Dimensional Multigroup Calculations: Estimation of Group Constants By R. EHRLICH	151
Numerical Methods for Solving Multi-Dimensional Multigroup Diffusion Equations By RICHARD S. VARGA	164
Monte Carlo Methods By R. D. RICHTMYER	190

Transport Theory and Invariant Imbedding By RICHARD BELLMAN and ROBERT KALABA	206
Numerical Solution of Neutron Transport Problems By BENGT CARLSON	219
Problems of Reactor Kinetics By HARRY SOODAK	233
Core Kinetics By H. L. GARABEDIAN	256
Temperature Coefficients and Stability By HARVEY BROOKS	289
System Kinetics By T. A. WELTON	309
Rearrangement Inequalities and Non-Linear Stability Criteria By W. K. ERGEN	327
