LIST OF PARTICIPANTS	ix
1. SOME INEQUALITIES FOR GAUSSIAN MEASURES AND THE LONG-RANGE ORDER OF THE ONE-DIMENSIONAL PLASMA H. J. BRASCAMP AND E. H. LIEB 1.1. Introduction. 1.2. Basic concavity theorem. 1.3. Application of Theorem 1.1 to Gaussian measure. 1.4. The one-dimensional plasma.	1
2. ASYMPTOTIC EVALUATION OF CERTAIN WIENER INTEGRALS FOR LARGE TIME M. D. DONSKER AND S. R. S. VARADHAN 2.1. Introduction. 2.2. The upper estimate. 2.3. The lower estimate. 2.4. The equality of the estimates.	15
3. COVARIANT SCHRÖDINGER EQUATIONS J. S. DOWKER 3.1. Deriving the equations. 3.2. Solving the equations. 3.3. Conclusion. 3.4. Appendix.	34
4. FUNCTIONAL PROBLEMS IN THE THEORY OF POLYMERS S. F. EDWARDS 4.1. Introduction. 4.2. A problem from dilute solution theory. 4.3. Rubber elasticity. 4.4. Entanglements of chains.	53
5. MEASURES ON INFINITE-DIMENSIONAL MANIFOLDS K. D. ELWORTHY 5.1. Introduction. 5.2. Abstract Wiener manifolds. 5.3. Construction by stochastic differential equations. 5.4. General remarks.	60
6. THE FREE EUCLIDEAN PROCA AND ELECTROMAGNETIC FIELDS L. GROSS 6.1. Introduction. 6.2. The Proca field. 6.3. The electromagnetic field.	69
7. THE DESIGN OF FUTURE COMPUTING MACHINERY FOR FUNCTIONAL INTEGRATION J. M. HAMMERSLEY	83
8. SOME PROBABILISTIC ASPECTS OF SCATTERING THEORY M. KAC AND P. VAN MOERBEKE 8.1. Introduction. 8.2. A trace formula. 8.3. Introducing the Konteweg-de Vries flow. 8.4. Konteweg-de Vries flow continued. 8.5. A question of isospectrality. 8.6. A discrete analogue.	87

9. HOW TO MAKE A HEAT BATH	97
J. T. LEWIS AND L. C. THOMAS	
9.1. Introduction. 9.2. Linear stochastic differential equations. 9.3.	
Vector-valued processes. 9.4. Dilating semigroups of contractions. 9.5.	
The Ford-Kac-Mazur model. 9.6. A string model. 9.7. Lax-Phillips	
structures. 9.8. Remarks.	
10. FUNCTIONAL INTEGRALS AND LOCAL MANY-BODY PROBLEMS: LOCALIZED MOMENTS AND SMALL PARTICLES	124
B. MÜHLSCHLEGEGL	
10.1. Method of functional integrals for general many-body systems.	
10.2. The localized magnetic moment problem. 10.3. Zero-dimensional	
superconductors.	
11. REMARKS ON MARKOV FIELD EQUATIONS	136
E. NELSON	
11.1. Introduction. 11.2. The lattice approximation. 11.3. The Markov	
field equation. 11.4. Speculations.	
12. CAUSTICS AND MULTIVALUEDNESS: TWO RESULTS OF ADDING PATH AMPLITUDES	144
L. SCHULMAN	
12.1. Propagators for multivalued wave functions. 12.2. Caustics in	
electron optics.	
13. FUNCTIONAL INTEGRATION AND INTERACTING QUANTUM FIELDS	157
I. E. SEGAL	
13.1. Introduction. 13.2. Renormalized powers of quantized distributions.	
13.3. Invariant integration in solution manifolds of relativistic	
equations.	
14. DEFINITIONS AND SELECTED APPLICATIONS OF FEYNMAN-TYPE INTEGRALS	169
J. TARSKI	
14.1. Examples and definitions. 14.2. Some problems of integration.	
14.3. Applications.	
15. PROBLEMS IN QUANTUM GRAVITY	181
J. G. TAYLOR	
15.1. Introduction. 15.2. Divergences and ambiguities. 15.3. Choice of	
variables. 15.4. Operator ordering. 15.5. The loop expansion method.	
15.6. Counter terms in the loop expansion. 15.7. Conclusion.
