Part I Mathematical Methods and General

Dynamics for Golden Mean Rotation. By M.J. Feigenbaum	2
1. Introduction	2
2. Golden Mean Circle Maps	3
3. Trajectory Scaling	5
4. The Golden Mean Power Spectrum	9
5. Conclusion	15
Nonlinear Phenomena in Dissipative Systems. By P. Couillet (With 33 Figures) .	16
1. Stability Analysis of Equilibria	16
2. Steady Non Equilibrium Behavior and Pattern Formation	22
3. Time Dependent Periodic Phenomena	36
4. Quasiperiodic Phenomena	47
5. Chaotic Phenomena	53
References	67
Statistical Mechanics of the sine-Gordon Field: Part I. By R.K. Bullough	70
1. Introduction	70
2. Elementary Aspects of Action-Angle Variables: Action-Angle Variables for the Klein-Gordon Equation	72
3. The Ferromagnetic CsNiF_3 ; A Physical Example of the sine-Gordon Equation	76
4. Complete Integrability of the Classical sine-Gordon Equation	82
5. Functional Integrals for the Partition Function Z	91
6. The Partition Function for the Linear Klein-Gordon Equation	94
7. Transfer Integral Method for the Classical Partition Function of the sine-Gordon Equation	96
Statistical Mechanics of the sine-Gordon Field: Part II	
By R.K. Bullough, D.J. Pilling, and J. Timonen	103
8. Evaluation of the Partition Function Z for the sine-Gordon Field in Terms of Action-Angle Variables: Construction of the Measure	103
9. Floquet Theory for Periodic Problems	105
10. Partition Function for the sinh-Gordon Equation	108
11. Sine-Gordon Statistical Mechanics Without Phonon-Phonon Phase-Shifts ..	110
12. Sine-Gordon Statistical Mechanics with Phonon-Phonon Phase-Shifts Included	113
13. Classical Fermions	114
14. Unsolved Problems	116
15. Conclusion	117
Appendices	118
References	126
Probabilistic Cellular Automata. By B.A. Huberman (With 1 Figure)	129
1. Introduction	129
2. Automata Dynamics	130
3. The Stick-Slip Behavior of Faults	133
References	136

Part II Quantum Optics

Chaos, Generalized Multistability and Low Frequency Spectra in Quantum Optics By F.T. Arecchi (With 18 Figures)	140
1. Introduction: Order and Chaos in Quantum Optics	140
2. Physics of Stimulated Emission Processes	145
3. The Maxwell-Bloch Equations	150
4. Onset of Chaos, Generalized Multistability and Low Frequency Spectra in Quantum Optics	153
References	160
From Optical Bistability to Chaos. By H.M. Nussenzveig (With 9 Figures)	162
1. Introduction	162
2. The Ring Cavity	163
3. The Maxwell-Bloch Equations	168
4. The Linear Approximation	171
5. Optical Bistability	173
6. Semiclassical Theory: Steady State	176
7. Discussion of the State Equation	182
8. Linear Stability Analysis	187
9. Dispersive Optical Bistability	195
10. Quantum Theory of Optical Bistability	198
11. Spectrum of the Transmitted Light	204
12. Photon Statistics	207
13. Side Mode Instabilities	210
14. Multistability	215
15. Ikeda Instability. Approach to Chaos	220
References	224

Part III Fluids

Recent Developments in Rayleigh-Benard Convection and Interface Dynamics By A. Libchaber (With 6 Figures)	228
1. The Rayleigh-Benard Instability	228
2. Fluid-Fluid Interface, the Saffman-Taylor Problem	231
3. Solid-Liquid Interface, from Cells to Dendrites	234
References	236

Part IV Astrophysics and General Relativity

Nonlinear Problems in Stellar Dynamics. By G. Contopoulos (With 8 Figures)	238
1. Introduction	238
2. Stellar Motions on the Plane of Symmetry of a Spiral Galaxy	239
3. Stellar Motions on the Meridian Plane of an Axisymmetric Galaxy	243
4. Transition from Ordered to Stochastic Motion	244
5. Bifurcations and Gaps	247
6. Three-Dimensional Systems	249
References	253
Solitons in General Relativity and Supergravity. By G.W. Gibbons	255
Lecture 1: Black Hole Solitons in Ungauged Extended Supergravity	255
1. The Soliton Concept for Gravity	255
2. Absence of Solitons Without Horizons	256
3. Black Holes and the Breakdown of Supersymmetry at Finite Temperature ..	258
4. Extended Supersymmetry: Central Charges and Multiplet Shortening	262
5. Black Holes in N=2 Supergravity: Charge Without Charge	264
6. The Bogomolny Inequality	266

7. The Zero Modes	267
8. Conclusion	268
References	268
Lecture 2: Supersymmetric Monopoles in Kaluza-Klein Theory	270
1. Kaluza-Klein Theory	270
2. Gross-Perry-Sorkin Monopoles	271
3. N = 8 Supergravity in 5-Dimensions	273
4. Supersymmetries and Zero Models	275
5. Electric Magnetic Duality	276
6. Monopole-Pyrgon Duality	278
References	279
The Dynamics of Spacetime Curvature: Nonlinear Aspects	
By K. S. Thorne (With 6 Figures)	280
1. Introduction	280
2. Gravitational Waves	281
3. Geons	283
4. Black Holes	284
5. White Holes	285
6. Wormholes	286
7. Singularities	288
8. Techniques of Future Research: Soliton Theory and Numerical Relativity .	290
References	290
<hr/>	
<i>Part V High Energy Physics</i>	
<hr/>	
Unification, Supersymmetry and Cosmology. By J. Ellis	294
1. The Standard Model	294
2. From the Standard Model to Grand Unification	299
3. Simple GUT Models	303
4. New Interactions in GUTs	308
5. The Hierarchy Problem	313
6. Supersymmetric GUTs	317
7. Supersymmetry at Low Energies	322
8. Supersymmetry and CERN Collider Data	327
9. GUTs and Cosmology	332
10. Inflation and Supersymmetric Cosmology	336
References	340
Lectures on Quark Flavor Mixing in the Standard Model	
By E. de Rafael (With 29 Figures)	344
1. Overview of the Standard Model	344
2. Phenomenological Determination of the Cabibbo-Kobayashi-Maskawa Matrix Elements	360
3. The $\Delta S = 1$ Effective Hamiltonian for Non-Leptonic Decays in the Standard Model	374
4. Violation of CP-Invariance in the Standard Model	405
References	434
