

TABLE OF CONTENTS

Preface	ix
PART I	
EXPOSITORY LECTURES	
C. C. Conley and J. A. Smoller, <i>Algebraic and Topological Invariants for Reaction-Diffusion Equations</i>	3
C. M. Dafermos, <i>Hyperbolic Systems of Conservation Laws</i>	25
J. L. Ericksen, <i>Ill-Posed Problems in Thermoelasticity Theory</i>	
Lecture 1 <i>Twinning of Thermoelastic Materials</i>	71
Lecture 2 <i>Problems for Infinite Elastic Prisms</i>	80
Lecture 3 <i>St.-Venant's Problem for Elastic Prisms</i>	87
L. C. Evans, <i>Nonlinear Systems in Optimal Control Theory and Related Topics</i>	95
M. Giaquinta, <i>The Regularity Problem of Extremals of Variational Integrals</i>	115
E. Giusti, <i>Some Aspects of the Regularity Theory for Nonlinear Elliptic Systems</i>	147
S. Hildebrandt, <i>Quasilinear Elliptic Systems in Diagonal Form</i>	173
D. G. Schaeffer, <i>Topics in Bifurcation Theory</i>	
Lecture 1 <i>A Brief Introduction to Bifurcation Theory</i>	219
Lecture 2 <i>Unfoldings</i>	232
Lecture 3 <i>Symmetry in Bifurcation Theory</i>	245
L. Tartar, <i>The Compensated Compactness Method Applied to Systems of Conservation Laws</i>	263

PART II
SPECIAL SESSIONS

a. <u>Problems in Nonlinear Elasticity</u> , organized by S. S. Antman (University of Maryland)	
S. S. Antman, <i>Coercivity Conditions in Nonlinear Elasticity</i>	289
L. Brun and M. Potier-Ferry, <i>Constitutive Inequalities and Dynamic Stability in the Linear Theories of Elasticity, Thermoelasticity and Viscoelasticity</i>	299
R. J. DiPerna, <i>Generalized Solutions to Conservation Laws</i>	305
J. H. Maddocks, <i>Stability of the Elastica</i>	311
P. J. Olver, <i>Group Theoretic Classification of Conservation Laws in Elasticity</i>	323
b. <u>Applications of Bifurcation Theory to Mechanics</u> , organized by J. E. Marsden (University of California, Berkeley)	
J. Carr, <i>Phase Transitions Via Bifurcation from Heteroclinic Orbits</i>	333
E. N. Dancer, <i>Bifurcation under Continuous Groups of Symmetries</i>	343
J. Mallet-Paret, <i>Morse Decompositions and Global Continuation of Periodic Solutions for Singularly Perturbed Delay Equations</i>	351
J. E. Marsden, <i>Bifurcation and Linearization Stability in the Traction Problem</i>	367
J. F. Toland, <i>Singular Elliptic Eigenvalue Problems for Equations and Systems</i>	373
c. <u>Nonelliptic Problems and Phase Transitions</u> , organized by J. M. Ball (Heriot-Watt University)	
B. Dacorogna, <i>Regularization of Non Elliptic Variational Problems</i>	385
N. Fusco, <i>Remarks on the Relaxation of Integrals of the Calculus of Variations</i>	401

K. Hölbig and J. A. Nohel, <i>A Diffusion Equation with a Nonmonotone Constitutive Function</i>	409
M. Slemrod, <i>An Admissibility Criterion for Fluids Exhibiting Phase Transitions</i>	423
d. <u>Dynamical Systems and Partial Differential Equations, organized by J. K. Hale (Brown University)</u>	
N. Alikakos, <i>Stabilization of Solutions for a System with a Continuum of Equilibria and Distinct Diffusion Coefficients</i>	433
C. W. Bardos, <i>Relation between the Trapped Rays and the Distribution of the Eigenfrequencies of the Wave Equation in the Exterior of an Obstacle</i>	443
P. de Mottoni, <i>Stabilization Properties for Nonlinear Degenerate Parabolic Equations with Cut-Off Diffusivity</i>	453
J. K. Hale, <i>Dynamics in Parabolic Equations - An Example</i>	461
Index	473

Lectures not appearing in this volume

Expository lectures: T. B. Benjamin (University of Oxford),
A Novel Hamiltonian System deriving from Hydrodynamics

Special sessions

- a. R. V. Kohn (Courant Institute), *The Incompressible Limit in Nonlinear Elasticity*
- d. M. G. Crandall (University of Wisconsin), *Solutions of the Porous Medium Equation in \mathbb{R}^n under Optimal Conditions on Initial Values*
- e. Analysis and Computational Fluid Dynamics, organized by A.J. Chorin (University of California, Berkeley)
- A. J. Chorin (University of California, Berkeley), *Vortex Methods for Boundary Layer Analysis*
- O. Hald (University of California, Berkeley), *Inverse Eigenvalue Problems for the Mantle*

A. J. Majda (University of California, Berkeley), *The Design and Numerical Analysis of Vortex Methods*

The views, opinions, and/or findings contained in this volume are those of the authors and should not be construed as an official Department of the U.S. Army position, policy, or decision, unless so designated by other documentation.
