## Part I Classical Systems

---

<b>2. Fundamental Concepts .....</b>	14
2.1 Introduction .....	14
2.2 Conventional Perturbation Theory .....	16
2.3 Integrability .....	20
2.3.1 Noether's Theorem .....	21
2.3.2 Hidden Symmetries .....	24
2.3.3 Poincare Surface of Section .....	27
2.4 Nonlinear Resonances and Chaos .....	31
2.4.1 Single Resonance Hamiltonians .....	31
2.4.2 Two Resonance Hamiltonian .....	37
2.5 KAM Theory .....	39
2.6 Definition of Chaos .....	43
2.6.1 Lyapounov Characteristic Exponent .....	43
2.6.2 KS Metric Entropy and K-Flows .....	47
2.7 Time Dependent Hamiltonians .....	54
2.8 Conclusions .....	61
2.9 Problems .....	61
2.10 References .....	63
<b>3. Area Preserving Maps .....</b>	66
3.1 Introduction .....	66

<b>3.2</b>	<b>Twist Maps</b>	68
3.2.1	Derivation of a Twist Map from a Torus	69
3.2.2	Generating Functions	71
3.2.3	Birkhoff Fixed Point Theorem	72
3.2.4	The Tangent Map	74
3.2.5	Homoclinic and Heteroclinic Points	76
<b>3.3</b>	<b>Melnikov Distance</b>	80
<b>3.4</b>	<b>Whisker Maps</b>	84
<b>3.5</b>	<b>The Standard Map</b>	88
3.5.1	Rational and Irrational Orbits	88
3.5.2	Rational Approximates	92
<b>3.6</b>	<b>Scaling Behavior of the Noble KAM Tori</b>	99
<b>3.7</b>	<b>Renormalization in Twist Maps</b>	105
3.7.1	Integrable Twist Map	105
3.7.2	Nonintegrable Twist Map	109
3.7.3	The Universal Map	111
<b>3.8</b>	<b>Bifurcation of M-Cycles</b>	113
3.8.1	Some General Properties	113
3.8.2	The Quadratic Map	114
3.8.3	Scaling in the Quadratic DeVogelaere Map	117
<b>3.9</b>	<b>Cantori</b>	124
<b>3.10</b>	<b>Diffusion in Two-Dimensional Maps</b>	129
3.10.1	Numerical Results	129
3.10.2	Diffusion as a Markov Tree	139
<b>3.11</b>	<b>Conclusions</b>	149
<b>3.12</b>	<b>Problems</b>	151
<b>3.13</b>	<b>References</b>	152
<b>4.</b>	<b>Global Properties</b>	156
<b>4.1</b>	<b>Introduction</b>	156
<b>4.2</b>	<b>Important Models</b>	158
4.2.1	Delta-kicked rotor (Standard Map)	159
4.2.2	The Duffing Oscillator	161
4.2.3	Driven Particle in Infinite Square Potential	166
4.2.4	Driven One Dimensional Hydrogen	167
<b>4.3</b>	<b>Renormalization Transformation</b>	178
4.3.1	The Paradigm Hamiltonian	179
4.3.2	The Renormalization Transformation	182
<b>4.4</b>	<b>Fixed Points</b>	186
4.4.1	Relative Wave Number	186
4.4.2	Amplitude Equations	187

4.5	Application of Renormalization Predictions . . . . .	191
4.5.1	Driven Square Well System . . . . .	192
4.5.2	Duffing Oscillator . . . . .	195
4.6	Arnold Diffusion . . . . .	197
4.6.1	Resonance Networks . . . . .	197
4.6.2	Numerical Observations . . . . .	200
4.6.3	Diffusion Along Separatrix Layers . . . . .	203
4.6.4	Diffusion Coefficient . . . . .	207
4.6.5	Some Applications . . . . .	210
4.7	Stochasting Tiling . . . . .	213
4.7.1	Delta-kicked Harmonic Oscillator . . . . .	214
4.7.2	Double Wave Model . . . . .	215
4.8	Conclusions . . . . .	217
4.9	Problems . . . . .	219
4.10	References . . . . .	220

## Part II Quantum Systems

---

5.	<b>Quantum Integrability</b> . . . . .	222
5.1	Introduction . . . . .	222
5.2	Moyal Bracket . . . . .	224
5.3	Lax Pairs and Lie Algebra . . . . .	225
5.3.1	The Hamiltonian . . . . .	226
5.3.2	The Generators for SU(3) . . . . .	227
5.3.3	Lax Pairs . . . . .	227
5.3.4	Second Constant of the Motion . . . . .	230
5.4	Time Average as an Invariant . . . . .	232
5.5	Integrable and Non-integrable Spin Systems . . . . .	234
5.5.1	Classical Spin Models . . . . .	234
5.5.2	Quantum XY Models . . . . .	240
5.6	Conclusions . . . . .	244
5.7	Problems . . . . .	246
5.8	References . . . . .	247
6.	<b>Random Matrix Theory</b> . . . . .	248
6.1	Introduction . . . . .	248
6.2	Structure of the Hamiltonian Matrix . . . . .	253
6.2.1	Space-Time Homogeneity and Isotropy . . . . .	253
6.2.2	Time Reversal Invariance . . . . .	254
6.3	Invariant Measure . . . . .	258

6.3.1	Real Symmetric Hamiltonians	258
6.3.2	Hermitian Hamiltonians	261
6.3.3	Quaternion Real Hamiltonians	263
6.4	Gaussian Random Matrix Ensembles	263
6.4.1	Information Extremization	264
6.4.2	Cluster Functions	265
6.5	Energy Level Density for GOE	267
6.6	Level Spacing Statistics	270
6.6.1	Definition of the Spacing Distribution	270
6.6.2	Spacing Distribution for a $2 \times 2$ Hamiltonian	271
6.6.3	Bounds for GOE	273
6.7	$\Delta_3$ -Statistics	277
6.7.1	Energy Density Correlation Function	278
6.7.2	$\Delta_3$ Statistics	279
6.7.3	$\Delta_3$ Statistics for GOE	281
6.7.4	$\Delta_3$ Statistics for GUE and GSE	283
6.8	Conclusions	284
6.9	Problems	285
6.10	References	286
7.	<b>Observed Spectra</b>	287
7.1	Introduction	287
7.2	Symmetries and Spectral Properties	290
7.3	Experimental Nuclear Spectral Statistics	295
7.4	Experimental Molecular Spectral Statistics	298
7.5	Spectral Statistics of the Billiard	300
7.6	Transition in Spectral Statistics	304
7.6.1	Anharmonic Oscillators	305
7.6.2	Coupled Morse Oscillators	307
7.7	Conclusions	311
7.8	Problems	314
7.9	References	315
8.	<b>Semi-Classical Theory</b>	318
8.1	Introduction	318
8.2	Green's Function and Density of States	320
8.3	The Path Integral	322
8.3.1	The General Case, $\hat{H} = \hat{T} + \hat{V}$	322
8.3.2	The Free Particle, $\hat{H} = \hat{T}$	324
8.4	Semi-Classical Approximation	326

	Contents	xiii
8.4.1	Method of Stationary Phase .....	326
8.4.2	The Semi-Classical Green's Function .....	327
8.4.3	Conjugate Points .....	332
8.5	Energy Green's Function .....	334
8.5.1	General Expression .....	334
8.5.2	Particle in a Potential Well .....	339
8.5.3	Density of States .....	342
8.6	$\Delta_3$ Statistics for Billiards on a Rectangle .....	347
8.6.1	Energy Green's Function .....	347
8.6.2	Density of States and Staircase Function ..	349
8.6.3	General Formula for the $\Delta_3$ Statistic .....	352
8.7	Gutzwiller Trace Formula .....	357
8.7.1	Transverse Coordinates .....	357
8.7.2	Monodromy Matrix .....	360
8.7.3	Response Function for d=2 .....	362
8.8	Anisotropic Kepler Problem .....	363
8.9	Scars .....	368
8.9.1	Scars in the Quantized Stadium .....	369
8.9.2	The Quantized Baker's Map .....	370
8.10	Conclusions .....	376
8.11	Problems .....	378
8.12	References .....	379
<b>9.</b>	<b>Driven Systems .....</b>	<b>382</b>
9.1	Introduction .....	382
9.2	Floquet Theory .....	384
9.2.1	Floquet Map .....	384
9.2.2	Floquet Hamiltonian .....	386
9.3	Spectral Statistics .....	387
9.3.1	Time Reversal Invariance .....	388
9.3.2	Circular Orthogonal Ensemble .....	389
9.4	Nonlinear Quantum Resonances .....	391
9.4.1	Double Resonance Model .....	392
9.4.2	Quantum Resonance Overlap .....	393
9.4.3	Spectral Statistics .....	395
9.5	Renormalization .....	397
9.5.1	Quantum KAM Behavior .....	398
9.5.2	Paradigm Schrodinger Equation .....	399
9.5.3	Higher Order Resonances .....	401
9.5.4	Renormalization Mapping .....	403
9.5.5	Stable Manifold .....	405

9.6	Delta-Kicked Rotor - Quantum Standard Map . . . . .	407
9.6.1	The Quantum Model . . . . .	408
9.6.2	The Floquet Map . . . . .	409
9.6.3	Diffusion in the Quantized Driven Rotor . . . . .	411
9.6.4	Dynamic Anderson Localization . . . . .	413
9.6.5	Spectral Statistics . . . . .	421
9.7	Microwave Driven Hydrogen . . . . .	422
9.7.1	Experimental Apparatus . . . . .	423
9.7.2	One-dimensional Approximation . . . . .	428
9.8	Conclusions . . . . .	439
9.9	Problems . . . . .	441
9.10	References . . . . .	441

### **Part III Stochastic Systems**

---

10.	Stochastic Systems . . . . .	445
10.1	Introduction . . . . .	445
10.2	The Brownian Rotor . . . . .	445
10.3	The Fokker-Planck Equation . . . . .	447
10.3.1	Single Wave Case . . . . .	448
10.3.2	Double Wave Case . . . . .	448
10.4	Mean First Passage Time . . . . .	449
10.5	Floquet Theory . . . . .	451
10.5.1	General Floquet Theory . . . . .	451
10.5.2	The Brownian Rotor . . . . .	452
10.6	Spectral Statistics . . . . .	454
10.6.1	Random Complex Eigenvalues . . . . .	455
10.6.2	Random Matrix Theory . . . . .	455
10.6.3	Stochastic Floquet Matrix . . . . .	456
10.7	Conclusions . . . . .	457
10.8	Problems . . . . .	458
10.9	References . . . . .	458

---

### **Part IV Appendices**

---

A.	Classical Mechanics . . . . .	459
A.1	Newton's Equations . . . . .	459
A.2	Lagrange's Equations . . . . .	460
A.3	Hamilton's Equations . . . . .	461

A.4	The Poisson Bracket .....	461
A.5	Phase Space Volume Conservaton .....	462
A.6	Action-Angle Variables .....	463
A.7	Hamilton's Principle Function .....	465
A.8	References .....	466
<b>B.</b>	<b>Simple Models .....</b>	<b>467</b>
B.1	The Pendulum .....	467
B.2	Double Well Potential .....	471
B.3	Infinite Square Well Potential .....	474
B.4	One-Dimensional Hydrogen .....	477
<b>C.</b>	<b>Renormalization Integral .....</b>	<b>481</b>
C.1	$\nu$ =Integer .....	481
C.2	$\nu$ =Rational Fraction .....	483
C.3	References .....	485
<b>D.</b>	<b>The Moyal Bracket .....</b>	<b>486</b>
D.1	The Wigner Function .....	486
D.2	Ordering of Operators .....	488
D.3	Moyal Bracket .....	490
D.4	References .....	491
<b>E.</b>	<b>SU(3) .....</b>	<b>492</b>
E.1	Special Unitary Groups .....	492
E.2	References .....	496
<b>F.</b>	<b>Space-Time Symmetries .....</b>	<b>497</b>
F.1	Linear and Antilinear Operators .....	497
F.2	Infinitesimal Transformations .....	498
F.3	Discrete Transformations .....	501
F.4	References .....	502
<b>G.</b>	<b>GOE Spectral Statistics .....</b>	<b>503</b>
G.1	The Generating Function $R_4(1)$ .....	503
G.2	The General Case, $R_N(1)$ .....	508
G.3	Cluster Function, $T_1(x)$ .....	510
G.4	Cluster Function, $T_2(x, y)$ .....	512
G.5	References .....	514

<b>H. COE Spectral Statistics</b>	515
H.1 The Generating Function $R_4(1)$	515
H.2 The Generating Function, $R_N(1)$	517
H.3 Cluster Functions $T_1(\theta_1)$ and $T_2(\theta_1, \theta_2)$	519
H.4 References	521
<b>I. Lloyd's Model</b>	522
I.1 Localization Length	522
I.2 References	528
<b>J. Hydrogen in Parabolic Coordinates</b>	529
J.1 The Schrodinger Equation	529
J.2 One-dimensional Hydrogen	534
J.3 References	536
<b>Author Index</b>	537
<b>Subject Index</b>	542
