

CONTENTS

Preface 11

Notation Frequently Used 15

Chapter 1. Introduction 17

Part I. HILBERT SPACE

Chapter 2. Inner Product of Functions. Norm, Metric 21

Chapter 3. The Space L_2 32

Chapter 4. Convergence in the Space $L_2(G)$ (Convergence in the Mean). Complete Space. Separable Space 38

a) Convergence in the space $L_2(G)$ 38

b) Completeness 41

c) Density. Separability 44

Chapter 5. Orthogonal Systems in $L_2(G)$ 47

a) Linear dependence and independence in $L_2(G)$ 47

b) Orthogonal and orthonormal systems in $L_2(G)$ 51

c) Fourier series. Complete systems. The Schmidt orthonormalization 54

d) Decomposition of $L_2(G)$ into orthogonal subspaces 62

e) Some properties of the inner product 64

Chapter 6. Hilbert Space 66

a) Pre-Hilbert space. Hilbert space 66

b) Linear dependence and independence in a Hilbert space. Orthogonal systems, Fourier series 74

c) Orthogonal subspaces. Some properties of the inner product 78

d) The complex Hilbert space 79

Chapter 7. Some Remarks to the Preceding Chapters. Normed Space, Banach Space 81

Chapter 8. Operators and Functionals, especially in Hilbert Spaces 86

a) Operators in Hilbert spaces 87

b) Symmetric, positive, and positive definite operators. Theorems on density 98

c) Functionals. The Riesz theorem 109

Part II. VARIATIONAL METHODS

Chapter 9. Theorem on the Minimum of a Quadratic Functional and its Consequences 113

Chapter 10. The Space H_A 121

Chapter 11. Existence of the Minimum of the Functional F in the Space H_A . Generalized Solutions 133

VARIATIONAL METHODS IN MATHEMATICS, SCIENCE AND ENGINEERING

- Chapter 12. The Method of Orthonormal Series. Example 146
- Chapter 13. The Ritz Method 153
- Chapter 14. The Galerkin Method 161
- Chapter 15. The Least Squares Method. The Courant Method 166
- Chapter 16. The Method of Steepest Descent. Example 172
- Chapter 17. Summary of Chapters 9 to 16 178

Part III. APPLICATION OF VARIATIONAL METHODS TO THE SOLUTION OF BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS

- Chapter 18. The Friedrichs Inequality. The Poincaré Inequality 188
- Chapter 19. Boundary Value Problems in Ordinary Differential Equations 199
 - a) Second order equations 199
 - b) Higher order equations 219
- Chapter 20. Problem of the Choice of a Base 223
 - a) General principles 223
 - b) Choice of the base for ordinary differential equations 234
- Chapter 21. Numerical Examples: Ordinary Differential Equations 238
- Chapter 22. Boundary Value Problems in Second Order Partial Differential Equations 254
- Chapter 23. The Biharmonic Operator. (Equations of Plates and Wall-beams.) 266
- Chapter 24. Operators of the Mathematical Theory of Elasticity 276
- Chapter 25. The Choice of a Base for Boundary Value Problems in Partial Differential Equations 285
- Chapter 26. Numerical Examples: Partial Differential Equations 293
- Chapter 27. Summary of Chapters 18 to 26 307

Part IV. THEORY OF BOUNDARY VALUE PROBLEMS IN DIFFERENTIAL EQUATIONS BASED ON THE CONCEPT OF A WEAK SOLUTION AND ON THE LAX-MILGRAM THEOREM

- Chapter 28. The Lebesgue Integral. Domains with the Lipschitz Boundary 314
- Chapter 29. The Space $W_2^{(k)}(G)$ 328
- Chapter 30. Traces of Functions from the Space $W_2^{(k)}(G)$. The Space $\dot{W}_2^{(k)}(G)$. The Generalized Friedrichs and Poincaré Inequalities 337
- Chapter 31. Elliptic Differential Operators of Order $2k$. Weak Solutions of Elliptic Equations 344
- Chapter 32. The Formulation of Boundary Value Problems 355
 - a) Stable and unstable boundary conditions 355
 - b) The weak solution of a boundary value problem. Special cases 359
 - c) Definition of the weak solution of a boundary value problem. The general case 366
- Chapter 33. Existence of the Weak Solution of a Boundary Value Problem. V -ellipticity. The Lax-Milgram Theorem 383
- Chapter 34. Application of Direct Variational Methods to the Construction of an Approximation of the Weak Solution 399
 - a) Homogeneous boundary conditions 399
 - b) Nonhomogeneous boundary conditions 408
 - c) The method of least squares 414

Chapter 35. The Neumann Problem for Equations of Order $2k$ (the Case when the Form $((v, u))$ is not V -elliptic) 417

Chapter 36. Summary and Some Comments to Chapters 28 to 35 434

Part V. THE EIGENVALUE PROBLEM

Chapter 37. Introduction 441

Chapter 38. Completely Continuous Operators 445

Chapter 39. The Eigenvalue Problem for Differential Operators 462

Chapter 40. The Ritz Method in the Eigenvalue Problem 477

a) The Ritz method 477

b) The problem of the error estimate 485

Chapter 41. Numerical Examples 495

Part VI. SOME SPECIAL METHODS. REGULARITY OF THE WEAK SOLUTION

Chapter 42. The Finite Element Method 503

Chapter 43. The Method of Least Squares on the Boundary for the Biharmonic Equation (for the Problem of Wall-beams). The Trefftz Method of the Solution of the Dirichlet Problem for the Laplace Equation 511

a) First boundary value problem for the biharmonic equation (the problem of wall-beams) 512

b) The idea of the method of least squares on the boundary 514

c) Convergence of the method 517

d) The Trefftz method 521

Chapter 44. The Method of Orthogonal Projections 524

Chapter 45. Application of the Ritz Method to the Solution of Parabolic Boundary Value Problems 533

Chapter 46. Regularity of the Weak Solution, Fulfilment of the Given Equation and of the Boundary Conditions in the Classical Sense. Existence of the Function $w \in W_2^{(k)}(G)$ satisfying the Given Boundary Conditions 545

a) Smoothness of the weak solution 545

b) Existence of the function $w \in W_2^{(k)}(G)$ satisfying the given boundary conditions 549

Chapter 47. Concluding Remarks, Perspectives of the Presented Theory 551

Table for the Construction of Most Current Functionals and of Systems of Ritz Equations 554
