

CONTENTS

CH. I. ALGEBRAS OF EVENTS

- § 1. Fundamental relations 9
- § 2. Some further operations and relations 13
- § 3. Axiomatisation development of the algebra of events 16
- § 4. On the structure of finite algebras of events 18
- § 5. Representation of algebras of events by algebras of sets 21
- § 6. Exercises 25

CH. II. PROBABILITY

- § 1. Aim and scope of the theory of probability 29
- § 2. The notion of probability 30
- § 3. Probability algebras 33
- § 4. Finite probability algebras 40
- § 5. Probabilities and combinatorics 41
- § 6. Kolmogorov probability spaces 46
- § 7. The extension of rings of sets, algebras of sets and measures 47
- § 8. Conditional probabilities 54
- § 9. The independence of events 57
- § 10. "Geometric" probabilities 62
- § 11. Conditional probability spaces 69
- § 12. Exercises 74

CH. III. DISCRETE RANDOM VARIABLES

- § 1. Complete systems of events and probability distributions 84
- § 2. The theorem of total probability and Bayes' theorem 84
- § 3. Classical probability distributions 87
- § 4. The concept of a random variable 94
- § 5. The independence of random variables 99
- § 6. Convolutions of discrete random variables 100
- § 7. Expectation of a discrete random variable 102
- § 8. Some theorems on expectations 105
- § 9. The variance 110
- § 10. Some theorems concerning the variance 115
- § 11. The correlation coefficient 116
- § 12. The Poisson distribution 122
- § 13. Some applications of the Poisson distribution 125
- § 14. The algebra of probability distributions 131

- § 15. Generating functions 135
- § 16. Approximation of the binomial distribution by the normal distribution 149
- § 17. Bernoulli's law of large numbers 157
- § 18. Exercises 159

CH. IV. GENERAL THEORY OF RANDOM VARIABLES

- § 1. The general concept of a random variable 172
- § 2. Distribution functions and density functions 173
- § 3. Probability distribution in several dimensions 177
- § 4. Conditional distributions and conditional density functions 181
- § 5. Independent random variables 182
- § 6. The uniform distribution 184
- § 7. The normal distribution 186
- § 8. Distribution of a function of a random variable 193
- § 9. The convolution of distributions 195
- § 10. Distribution of a function of several random variables 203
- § 11. The general notion of expectation 208
- § 12. Expectation vectors of higher dimensional probability distributions 217
- § 13. The median and the quantiles 217
- § 14. The general notions of standard deviation and variance 219
- § 15. On some other measures of fluctuation 222
- § 16. Variance in the higher dimensional case 225
- § 17. Exercises 232

CH. V. MORE ABOUT RANDOM VARIABLES

- § 1. Random variables on conditional probability spaces 245
- § 2. Generalization of the notion of conditional probability on Kolmogorov probability spaces 255
- § 3. Generalization of the notion of conditional probability on conditional probability spaces 263
- § 4. Generalization of the notion of conditional mathematical expectation in Kolmogorov probability spaces 270
- § 5. Generalization of Bayes' theorem 273
- § 6. The correlation ratio 275
- § 7. On some other measures of the dependence of two random variables 279
- § 8. The fundamental theorem of Kolmogorov 286
- § 9. Exercises 290

CH. VI. CHARACTERISTIC FUNCTIONS

- § 1. Random variables with complex values 301
- § 2. Characteristic functions and their basic properties 302
- § 3. Characteristic functions of some important distributions 310
- § 4. Some fundamental theorems on characteristic functions 312
- § 5. Characteristic properties of the normal distribution 323
- § 6. Characteristic functions of multidimensional distributions 340
- § 7. Infinitely divisible distributions 347

- § 8. Stable distributions 349
- § 9. Characteristic functions of conditional probability distributions 353
- § 10. Exercises 367

CH. VII. LAWS OF LARGE NUMBERS

- § 1. Chebyshev's and related inequalities 373
- § 2. Stochastic convergence 374
- § 3. Generalization of Bernoulli's law of large numbers 377
- § 4. Bernstein's improvement of Chebyshev's inequality 384
- § 5. The Borel-Cantelli lemma 389
- § 6. Kolmogorov's inequality 392
- § 7. The strong law of large numbers 394
- § 8. The fundamental theorem of mathematical statistics 400
- § 9. The law of the iterated logarithm 402
- § 10. Sequences of mixing sets 406
- § 11. Stable sequences of events 409
- § 12. Sequences of exchangeable events 412
- § 13. The zero-one law 418
- § 14. Kolmogorov's three-series theorem 420
- § 15. Laws of large numbers on conditional probability spaces 424
- § 16. Exercises 428

CH. VIII. THE LIMIT THEOREMS OF PROBABILITY THEORY

- § 1. The central limit theorems 440
- § 2. The local form of the central limit theorem 449
- § 3. The domain of attraction of the normal distribution 453
- § 4. Convergence to the Poisson distribution 458
- § 5. The central limit theorem for samples from a finite population 460
- § 6. Generalization of the central limit theorem through the application of mixing theorems 466
- § 7. The central limit theorem for sums of a random number of random variables 471
- § 8. Limit distributions for Markov chains 475
- § 9. Limit distributions for "order statistics" 486
- § 10. Limit theorems for empirical distribution functions 492
- § 11. Limit distributions concerning random walk problems 500
- § 12. Proof of the limit theorems by the operator method 515
- § 13. Exercises 528

CH. IX. APPENDIX. INTRODUCTION TO INFORMATION THEORY

- § 1. Hartley's formula 540
- § 2. Shannon's formula 546
- § 3. Conditional and relative information 554
- § 4. The gain of information 560
- § 5. The statistical meaning of information 564
- § 6. Further measures of information 569

- § 7. Statistical interpretation of the information of order α 583
- § 8. The definition of information for general distributions 586
- § 9. Information-theoretical proofs of limit theorems 597
- § 10. Extension of information theory to conditional probability spaces 603
- § 11. Exercises 605
