

Contents

Preface	vii
Contributors	xi
Chapter 1	
Mathematical Problems in Classical Physics	
<i>V.I. Arnold</i>	1
Chapter 2	
Geometric and Analytic Studies in Turbulence	
<i>Peter Constantin</i>	21
Chapter 3	
Riemann Maps and World Maps	
<i>Mitchell J. Feigenbaum</i>	55
Chapter 4	
Symmetry of Attractors and the Karhunen–Loève Decomposition	
<i>Michael Dellnitz, Martin Golubitsky, and Matthew Nicol</i>	73
Chapter 5	
Viscous and Viscoelastic Potential Flow	
<i>Daniel D. Joseph and Terrence Y. Liao</i>	109
Chapter 6	
Singularities and Similarities in Interface Flows	
<i>Andrea L. Bertozzi, Michael P. Brenner, Todd F. Dupont, and Leo P. Kadanoff</i>	155
Chapter 7	
Difference Methods for Time-Dependent Partial Differential Equations	
<i>Heinz-Otto Kreiss</i>	209
Chapter 8	
Statistical Mechanics of Nonlinear Wave Equations	
<i>H.P. McKean and K.L. Vaninsky</i>	239
Chapter 9	
Geometric Mechanics, Stability, and Control	
<i>Jerrold E. Marsden</i>	265
Chapter 10	
Applications of Inertial Manifolds to Scientific Computing: A New Insight in Multilevel Methods	
<i>Roger Temam</i>	293
