<b>AUTHOR'S PREFACE</b>	vii
<b>CHAPTER I. SPECIAL PROBLEMS OF FUNCTIONAL ANALYSIS</b>	
<b>§1. INTRODUCTION</b>	1
1. Summable functions (1). 2. The Hölder and Minkowski inequalities (3). 3. The reverse of the Hölder and Minkowski inequalities (7).	
<b>§2. BASIC PROPERTIES OF THE SPACES <math>L_p</math></b>	9
1. Norms. Definitions (9). 2. The Riesz-Fischer Theorem (11). 3. Con- tinuity in the large of functions in $L_p$ (11). 4. Countable dense nets (13).	
<b>§3. LINEAR FUNCTIONALS ON <math>L_p</math></b>	16
1. Definitions. Boundedness of linear functionals (16). 2. Clarkson's in- equalities (17). 3. Theorem on the general form of linear functionals (22). 4. Convergence of functionals (25).	
<b>§4. COMPACTNESS OF SPACES</b>	28
1. Definition of compactness (28). 2. A theorem on weak compactness (29). 3. A theorem on strong compactness (30). 4. Proof of the theorem on strong compactness (31).	
<b>§5. GENERALIZED DERIVATIVES</b>	33
1. Basic definitions (33). 2. Derivatives of averaged functions (35). 3. Rules for differentiation (37). 4. Independence of the domain (39).	
<b>§6. PROPERTIES OF INTEGRALS OF POTENTIAL TYPE</b>	42
1. Integrals of potential type. Continuity (42). 2. Membership in $L_{q^*}$ (43).	
<b>§7. THE SPACES <math>L_p^{(l)}</math> AND <math>W_p^{(l)}</math></b>	45
1. Definitions (45). 2. The norms in $L_p^{(l)}$ (46). 3. Decompositions of $W_p^{(l)}$ and its norming (48). 4. Special decompositions of $W_p^{(l)}$ (50).	
<b>§8. IMBEDDING THEOREMS</b>	56
1. The imbedding of $W_p^{(l)}$ in $C$ (56). 2. Imbedding of $W_p^{(l)}$ in $L_{q^*}$ (57). 3. Ex- amples (58).	

<b>§9. GENERAL METHODS OF NORMING <math>W_p^{(l)}</math> AND COROLLARIES OF THE IMBEDDING THEOREM</b>	<b>60</b>
1. A theorem on equivalent norms (60). 2. The general form of norms equivalent to a given one (62). 3. Norms equivalent to the special norm (64). 4. Spherical projection operators (64). 5. Nonstar-like domains (66). 6. Examples (67).	
<b>§10. SOME CONSEQUENCES OF THE IMBEDDING THEOREM</b>	<b>68</b>
1. Completeness of the space $W_p^{(l)}$ (68). 2. The imbedding of $W_p^{(l)}$ in $W_{pk}^{(k)}$ (69). 3. Invariant norming of $W_p^{(l)}$ (72).	
<b>§11. THE COMPLETE CONTINUITY OF THE IMBEDDING OPERATOR (KONDRAŠEV'S THEOREM)</b>	<b>74</b>
1. Formulation of the problem (74). 2. A lemma on the compactness of the special integrals in $C$ (75). 3. A lemma on the compactness of integrals in $L_q$ (77). 4. Complete continuity of the imbedding operator in $C$ (82). 5. Complete continuity of the operator of imbedding in $L_q$ (84).	
 <b>CHAPTER II. VARIATIONAL METHODS IN MATHEMATICAL PHYSICS</b>	
<b>§12. THE DIRICHLET PROBLEM</b>	<b>87</b>
1. Introduction (87). 2. Solution of the variational problem (88). 3. Solution of the Dirichlet problem (91). 4. Uniqueness of the solution of the Dirichlet problem (94). 5. Hadamard's example (97).	
<b>§13. THE NEUMANN PROBLEM</b>	<b>99</b>
1. Formulation of the problem (99). 2. Solution of the variational problem (100). 3. Solution of the Neumann problem (101).	
<b>§14. POLYHARMONIC EQUATIONS</b>	<b>103</b>
1. The behaviour of functions from $W_2^{(m)}$ on boundary manifolds of various dimensions (103). 2. Formulation of the basic boundary value problem (105). 3. Solution of the variational problem (106). 4. Solution of the basic boundary value problem (108).	
<b>§15. UNIQUENESS OF THE SOLUTION OF THE BASIC BOUNDARY VALUE PROBLEM FOR THE POLYHARMONIC EQUATION</b>	<b>112</b>
1. Formulation of the problem (112). 2. Lemma (112). 3. The structure of the domains $\Omega_h - \Omega_{3h}$ (115). 4. Proof of the lemma for $k < [s/2]$ (116). 5. Proof of the lemma for $k = [s/2] + 1$ (118). 6. Proof of the lemma for $[s/2] + 2 \leq k \leq m$ (120). 7. Remarks on the formulation of the boundary conditions (122).	
<b>§16. THE EIGENVALUE PROBLEM</b>	<b>123</b>
1. Introduction (123). 2. Auxiliary inequalities (124). 3. Minimal sequences and the equation of variations (126). 4. Existence of the first eigenfunction (128). 5. Existence of the later eigenfunctions (131). 6. The infinite sequence of eigenvalues (134). 7. Closedness of the set of eigenfunctions (136).	

CHAPTER III. THE THEORY OF HYPERBOLIC PARTIAL  
DIFFERENTIAL EQUATIONS

§17. SOLUTION OF THE WAVE EQUATION WITH SMOOTH INITIAL CONDITIONS 139  
1. Derivation of the basic inequality (139). 2. Estimates for the growth of the solution and its derivatives (142). 3. Solutions for special initial data (144). 4. Proof of the basic theorem (146).

§18. THE GENERALIZED CAUCHY PROBLEM FOR THE WAVE EQUATION 148  
1. Twice differentiable solutions (148). 2. Example (150). 3. Generalized solutions (152). 4. Existence of initial data (153). 5. Solutions of the generalized Cauchy problem (155).

§19. LINEAR EQUATIONS OF NORMAL HYPERBOLIC TYPE WITH VARIABLE COEFFICIENTS (BASIC PROPERTIES) 157  
1. Characteristics and bicharacteristics (157). 2. The characteristic conoid (164). 3. Equations in canonical coordinates (166). 4. The basic operators  $M^{(0)}$  and  $L^{(0)}$  in polar coordinates (168). 5. The system of basic relations on the cone (173).

§20. THE CAUCHY PROBLEM FOR LINEAR EQUATIONS WITH SMOOTH COEFFICIENTS 175  
1. The operators adjoint to the operators of the basic system (175). 2. The construction of the functions  $\sigma$  (177). 3. Investigation of the properties of the functions  $\sigma$  (179). 4. Derivation of the basic integral identity  $Bu = SF$  (181). 5. The inverse integral operator  $B^{-1}$  and the method of successive approximations (183). 6. The adjoint integral operator  $B^*$  (187). 7. The adjoint integral operator  $S^*$  (191). 8. Solution of the Cauchy problem for an even number of variables (192). 9. The Cauchy problem for an odd number of variables (195).

§21. INVESTIGATION OF LINEAR HYPERBOLIC EQUATIONS WITH VARIABLE COEFFICIENTS 196  
1. Simplification of the equation (196). 2. Formulation of the Cauchy problem for generalized solutions (198). 3. Basic inequalities (200). 4. A lemma on estimates for approximating solutions (204). 5. Solution of the generalized problem (209). 6. Formulation of the classical Cauchy problem (210). 7. A lemma on estimates for derivatives (213). 8. Solution of the classical Cauchy problem (215).

§22. QUASILINEAR EQUATIONS 217  
1. Formulation of functions of functions (217). 2. Basic inequalities (221). 3. Petrovsky's functional equation (224). 4. The Cauchy problem with homogeneous initial conditions (229). 5. Properties of averaged functions (231). 6. Transformation of initial conditions (235). 7. The general case for the Cauchy problem for quasilinear equations (237).
