

## TABLE OF CONTENTS

	<i>Page</i>
<b>CHAPTER I. FOURIER SERIES AND INTEGRALS</b>	<b>1</b>
1. Fourier Series	1
2. Example of a Discontinuous Function. Gibbs' Phenomenon and Non-Uniform Convergence	7
3. On the Convergence of Fourier Series	14
4. Passage to the Fourier Integral	17
5. Development by Spherical Harmonics	21
6. Generalizations: Oscillating and Osculating Approximations. Anharmonic Fourier Analysis. An Example of Non-Final Determination of Coefficients	26
A. Oscillating and Osculating Approximation	26
B. Anharmonic Fourier Analysis	27
C. An Example of a Non-Final Determination of Coefficients	29
<b>CHAPTER II. INTRODUCTION TO PARTIAL DIFFERENTIAL EQUATIONS</b>	<b>32</b>
7. How the Simplest Partial Differential Equations Arise	32
8. Elliptic, Hyperbolic and Parabolic Type. Theory of Characteristics	36
9. Differences Among Hyperbolic, Elliptic, and Parabolic Differential Equations. The Analytic Character of Their Solutions	40
A. Hyperbolic Differential Equations	41
B. Elliptic Differential Equations	42
C. Parabolic Differential Equations	43
10. Green's Theorem and Green's Function for Linear, and, in Particular, for Elliptic Differential Equations	44
A. Definition of the Adjoint Differential Expression	44
B. Green's Theorem for an Elliptic Differential Equation in its Normal Form	45
C. Definition of a Unit Source and of the Principal Solution.	47
D. The Analytic Character of the Solution of an Elliptic Differential Equation	47
E. The Principal Solution for an Arbitrary Number of Dimensions	49
F. Definition of Green's Function for Self-Adjoint Differential Equations	49
11. Riemann's Integration of the Hyperbolic Differential Equation	52
12. Green's Theorem in Heat Conduction. The Principal Solution of Heat Conduction	55
<b>CHAPTER III. BOUNDARY VALUE PROBLEMS IN HEAT CONDUCTION</b>	<b>63</b>
13. Heat Conductors Bounded on One Side	63
14. The Problem of the Earth's Temperature	68
15. The Problem of a Ring-Shaped Heat Conductor	71
16. Linear Heat Conductors Bounded on Both Ends	74
17. Reflection in the Plane and in Space	79
18. Uniqueness of Solution for Arbitrarily Shaped Heat Conductors	82

	<i>Page</i>
CHAPTER IV. CYLINDER AND SPHERE PROBLEMS . . . . .	84
19. Bessel and Hankel Functions . . . . .	84
A. The Bessel Function and its Integral Representation . . . . .	86
B. The Hankel Function and its Integral Representation . . . . .	88
C. Series Expansion at the Origin . . . . .	92
D. Recursion Formulas . . . . .	97
E. Asymptotic Representation of the Hankel Functions . . . . .	98
20. Heat Equalization in a Cylinder . . . . .	101
A. One-Dimensional Case $f = f(r)$ . . . . .	102
B. Two-Dimensional Case $f = f(r, \varphi)$ . . . . .	104
C. Three-Dimensional Case $f = f(r, \varphi, z)$ . . . . .	106
21. More About Bessel Functions . . . . .	107
A. Generating Function and Addition Theorems . . . . .	107
B. Integral Representations in Terms of Bessel Functions . . . . .	109
C. The Indices $n + \frac{1}{2}$ and $n \neq \frac{1}{3}$ . . . . .	111
D. Generalization of the Saddle-Point Method According to Debye . . . . .	116
22. Spherical Harmonics and Potential Theory . . . . .	123
A. The Generating Function . . . . .	123
B. Differential and Difference Equation . . . . .	123
C. Associated Spherical Harmonics . . . . .	126
D. On Associated Harmonics with Negative Index $m$ . . . . .	128
E. Surface Spherical Harmonics and the Representation of Arbitrary Functions . . . . .	130
F. Integral Representation of Spherical Harmonics . . . . .	130
G. A Recursion Formula for the Associated Harmonics . . . . .	132
H. On the Normalization of Associated Harmonics . . . . .	132
J. The Addition Theorem of Spherical Harmonics . . . . .	133
23. Green's Function of Potential Theory for the Sphere. Sphere and Circle Problems for Other Differential Equations . . . . .	134
A. Geometry of Reciprocal Radii . . . . .	135
B. The Boundary Value Problem of Potential Theory for the Sphere, The Poisson Integral . . . . .	136
C. General Remarks about Transformations by Reciprocal Radii . . . . .	139
D. Spherical Inversion in Potential Theory . . . . .	140
E. The Breakdown of Spherical Inversion for the Wave Equation . . . . .	142
24. More About Spherical Harmonics . . . . .	143
A. The Plane Wave and the Spherical Wave in Space . . . . .	143
B. Asymptotic Behavior . . . . .	146
C. The Spherical Harmonic as an Electric Multipole . . . . .	149
D. Some Remarks about the Hypergeometric Function . . . . .	152
E. Spherical Harmonics of Non-Integral Index . . . . .	155
F. Spherical Harmonics of the Second Kind . . . . .	157
Appendix I. Reflection on a Circular-Cylindrical or Spherical Mirror . . . . .	159
Appendix II. Additions to the Riemann Problem of Sound Waves in Section 11 . . . . .	164

	<i>Page</i>
<b>CHAPTER V. EIGENFUNCTIONS AND EIGEN VALUES</b> . . . . .	166
25. Eigen Values and Eigenfunctions of the Vibrating Membrane . . . . .	166
26. General Remarks Concerning the Boundary Value Problems of Acoustics and of Heat Conduction . . . . .	177
27. Free and Forced Oscillations. Green's Function for the Wave Equation . . . . .	182
28. Infinite Domains and Continuous Spectra of Eigen Values. The Condition of Radiation . . . . .	188
29. The Eigen Value Spectrum of Wave Mechanics. Balmer's Term . . . . .	200
30. Green's Function for the Wave Mechanical Scattering Problem. The Rutherford Formula of Nuclear Physics . . . . .	206
Appendix I. Normalization of the Eigenfunctions in the Infinite Domain . . . . .	210
Appendix II. A New Method for the Solution of the Exterior Boundary Value Problem of the Wave Equation Presented for the Special Case of the Sphere . . . . .	214
Appendix III. The Wave Mechanical Eigenfunctions of the Scattering Problem in Parabolic Coordinates . . . . .	225
Appendix IV. Plane and Spherical Waves in Unlimited Space of an Arbitrary Number of Dimensions . . . . .	227
A. Coordinate System and Notations . . . . .	227
B. The Eigenfunctions of Unlimited Many-Dimensional Space . . . . .	230
C. Spherical Waves and Green's Function in Many-Dimensional Space . . . . .	232
D. Passage from the Spherical Wave to the Plane Wave . . . . .	234
<b>CHAPTER VI. PROBLEMS OF RADIO</b> . . . . .	236
31. The Hertz Dipole in a Homogeneous Medium Over a Completely Conductive Earth . . . . .	237
A. Introduction of the Hertz Dipole . . . . .	237
B. Integral Representation of the Primary Stimulation . . . . .	240
C. Vertical and Horizontal Antenna for Infinitely Conductive Earth . . . . .	242
D. Symmetry Character of the Fields of Electric and Magnetic Antennas . . . . .	244
32. The Vertical Antenna Over an Arbitrary Earth . . . . .	246
33. The Horizontal Antenna Over an Arbitrary Earth . . . . .	257
34. Errors in Range Finding for an Electric Horizontal Antenna . . . . .	265
35. The Magnetic or Frame Antenna . . . . .	267
36. Radiation Energy and Earth Absorption . . . . .	270
Appendix. Radio Waves on the Spherical Earth . . . . .	279
Exercises for Chapter I . . . . .	290
Exercises for Chapter II . . . . .	291
Exercises for Chapter III . . . . .	292
Exercises for Chapter IV . . . . .	293
Exercises for Chapter V . . . . .	295
Exercises for Chapter VI . . . . .	296
Hints for Solving the Exercises . . . . .	297
Index . . . . .	331
