<i>Preface</i>	v
<b>CHAPTER 1</b> SERIES SOLUTION OF SECOND-ORDER LINEAR HOMOGENEOUS EQUATIONS	
1.1 Ordinary and singular points	1
1.2 Solution near an ordinary point	2
1.3 Indicial equation at a regular singularity	6
1.4 Solution near a regular singularity when the exponents differ by a non-integer	7
1.5 Solution near a regular singularity when the exponents are equal	10
1.6 Solution near a regular singularity when the exponents differ by an integer	13
1.7 Singularities at infinity	17
Exercises	18
Answers	19
<b>CHAPTER 2</b> CONTOUR INTEGRAL SOLUTIONS OF AN ORDINARY LINEAR DIFFERENTIAL EQUATION	
2.1 General comments	20
2.2 Laplace-type integrals	20
2.3 The differential equation with constant coefficients	22
2.4 The Laplace linear differential equation	23
2.5 Illustrations of the method	26
2.6 Generalization of the Laplace-type integral	33
2.7 The Euler contour integral	35
2.8 A particular case of the Euler transformation	37
2.9 The contour for two distinct branch points	38
2.10 Illustrations of the Euler integral	39
Exercises	42
Answers	42

### CHAPTER 3 OSCILLATION THEOREMS AND STURM-LIOUVILLE THEORY

3.1	The adjoint equation	44
3.2	The oscillation theorems	46
3.3	The comparison theorems	47
3.4	The distribution of the zeros	48
3.5	Sturm-Liouville systems	49
3.6	An eigenvalue problem for the harmonic equation	51
3.7	The regular eigenfunction problem	52
3.8	The orthogonality of eigenfunctions	55
3.9	Properties of approximation	56
3.10	The problem of completeness	58
	Exercises	60
	Answers	61

### CHAPTER 4 ASYMPTOTICS

4.1	Asymptotic equivalence	62
4.2	Asymptotic expansions	63
4.3	Properties of asymptotic power series	65
4.4	Watson's lemma	70
4.5	Irregular points of ordinary differential equations	71
4.6	The case of unequal roots	72
4.7	Application to the Whittaker and Bessel equations	73
4.8	The case of equal roots	74
4.9	An illustration of the case of equal roots	75
4.10	The W.K.B. method	75
4.11	The Legendre equation	77
4.12	The critical case	78
	Exercises	80
	Answers	82

### CHAPTER 5 THE GAMMA FUNCTION

5.1	The integral definition	83
5.2	The Euler products for $\Gamma(z)$	84
5.3	The Weierstrass infinite product	86
5.4	The relation to $\sin \pi z$	87
5.5	The beta function	89
5.6	The duplication formula	90
5.7	The multiplication theorem	91
5.8	The Hankel contour	93

5.9	Stirling's approximation	94
5.10	Binet's first integral	97
5.11	The asymptotic series for $\log \Gamma(z)$	99
5.12	The continuation of the asymptotic series	99
	Exercises	100
	Answers	103
CHAPTER 6 THE HYPERGEOMETRIC EQUATION		
6.1	The differential equation	104
6.2	The fundamental solution	105
6.3	The complete solution near the origin	106
6.4	Special hypergeometric functions	107
6.5	Alternative solutions of the hypergeometric equation	108
6.6	A representation by an Euler-type integral	109
6.7	The Barnes integral	111
6.8	Generalized hypergeometric functions	112
	Exercises	113
CHAPTER 7 THE CONFLUENT HYPERGEOMETRIC FUNCTION		
7.1	The confluent function as a limit	115
7.2	Special confluent hypergeometric functions	116
7.3	Integrals for the confluent function	117
7.4	Another Laplace-type integral	118
7.5	Further properties of the Laplace-type integral	119
7.6	The Barnes integral	120
7.7	The Whittaker functions	121
7.8	The asymptotic expansion of the Whittaker functions	122
7.9	The second solution	124
	Exercises	125
CHAPTER 8 THE LEGENDRE FUNCTIONS		
8.1	The generating function	127
8.2	Elementary properties of Legendre polynomials	128
8.3	Recurrence relations between Legendre polynomials	129
8.4	Other properties of Legendre polynomials	129
8.5	The expansion theorem for polynomials	131
8.6	The differential equation	132
8.7	The Legendre function of the first kind	133
8.8	Recurrence relations	134
8.9	The Laplace integrals for $P_\nu(z)$	136

8.10	The Legendre function of the second kind	136
8.11	Neumann's integral	139
8.12	A general expansion theorem	140
8.13	The associated Legendre functions	141
8.14	The addition theorem	143
	Exercises	145
	Answers	148
CHAPTER 9 BESSEL FUNCTIONS		
9.1	The generating function	149
9.2	Recurrence relations	150
9.3	The Bessel differential equation	151
9.4	Integral representation of $J_\nu(z)$	152
9.5	A second integral representation	153
9.6	General recurrence relations	154
9.7	The zeros of $J_\nu(z)$	156
9.8	The orthogonality relations	157
9.9	Independent solutions of the equation	159
9.10	The modified Bessel functions	162
9.11	The Wronskians	163
9.12	The Bessel function as a confluent hypergeometric function	165
9.13	Asymptotic expansions for the Bessel functions	166
9.14	Addition formulae	167
	Exercises	171
	Answers	176
CHAPTER 10 LAGUERRE POLYNOMIALS		
10.1	The generating function	177
10.2	Rodrigues's formula	178
10.3	Orthogonality relations	179
10.4	The Laguerre differential equation	180
10.5	Recurrence relations	182
10.6	Addition theorems	183
10.7	Integral representation in terms of Bessel functions	184
10.8	Expansions in series of Laguerre polynomials	185
	Exercises	185
CHAPTER 11 HERMITE POLYNOMIALS		
11.1	The generating function	187
11.2	Rodrigues's formula	188

CONTENTS

xi

11.3	Orthogonal properties	189
11.4	The Hermite differential equation	189
11.5	Recurrence relations	191
11.6	Addition theorems	192
11.7	Expansion in series of Hermite polynomials	193
	Exercises	194
APPENDIX 1 THE LAPLACE AND HELMHOLTZ EQUATIONS		195
APPENDIX 2 THE SCHRÖDINGER EQUATION		200
<i>References</i>		203
<i>Index</i>		205
