

# Contents

<i>Preface</i>	xi
<i>Acknowledgments</i>	xiii
<b>1. Introduction</b>	1
<b>2. Probability and Random Variables: A Review</b>	
2.1. Elements of Set Theory	6
2.2. Axioms of Probability and Probability Spaces	9
2.3. Random Variables	11
2.4. Functions and Random Variables	21
2.5. The Gaussian Random Variable and the Central Limit Theorem	26
References	28
Problems	29
<b>3. Stochastic Processes and Their Classifications</b>	
3.1. Basic Concepts of Stochastic Processes	34
3.2. Classification Based upon Regularity	42

3.3.	Classification Based upon Memory . . . . .	57
3.4.	The Gaussian Stochastic Process . . . . .	66
	References	67
	Problems	68
<b>4.</b>	<b>Stochastic Limits and Calculus in Mean Square</b>	
4.1.	Preliminary Remarks . . . . .	73
4.2.	Convergence of a Sequence of Random Variables . . .	75
4.3.	Mean Square Continuity . . . . .	87
4.4.	Mean Square Differentiation . . . . .	92
4.5.	Mean Square Integration . . . . .	99
4.6.	Distributions of Mean Square Derivatives and Integrals .	108
	References	112
	Problems	112
<b>5.</b>	<b>Random Ordinary Differential Equations</b>	
5.1.	Existence and Uniqueness . . . . .	116
5.2.	The Ito Equation . . . . .	119
5.3.	General Remarks on the Solution Process . . . . .	132
5.4.	Classification of Random Differential Equations . . . .	134
	References	134
	Problems	135
<b>6.</b>	<b>Differential Equations with Random Initial Conditions</b>	
6.1.	The Mean Square Theory . . . . .	139
6.2.	Statistical Properties of the Solution Process . . . . .	142
	References	150
	Problems	150
<b>7.</b>	<b>Differential Equations with Random Inhomogeneous Parts</b>	
7.1.	The Mean Square Theory . . . . .	153
7.2.	Solution Processes for Linear Equations . . . . .	157
7.3.	The Case of Markov Processes . . . . .	180
7.4.	Solution Processes for Nonlinear Equations . . . . .	191
	References	212
	Problems	213

**8. Differential Equations with Random Coefficients**

8.1. The Mean Square Theory . . . . .	218
8.2. First-Order Linear Equations . . . . .	219
8.3. Differential Equations with Random Constant Coefficients	222
8.4. Differential Equations of the Ito Type . . . . .	228
8.5. Perturbation Techniques . . . . .	233
8.6. Truncated Hierarchy Techniques . . . . .	247
References	252
Problems	253

**9. Stochastic Stability**

9.1. Moment Stabilities . . . . .	256
9.2. Lyapunov Stability . . . . .	271
References	278
Problems	278

**Appendix A. Sample Treatment of Random Differential Equations**

A.1. Stochastic Processes with Continuous Trajectories . . . . .	282
A.2. A Sample Calculus . . . . .	286
A.3. Stochastic Sample Solutions . . . . .	291
References	295

**Appendix B. Some Useful Properties of the Solution Process**

B.1. Zero and Threshold Crossings . . . . .	296
B.2. Distribution of Extrema . . . . .	301
B.3. Distribution of Intervals between Zeros . . . . .	307
B.4. The First Passage Time Probability . . . . .	313
References	319
