

Contents

<i>Preface</i>	<i>vii</i>
Introduction	1
1. Variational Estimates and Perturbation Theory	
1.1. Source Problems	6
1.2. Eigenvalue Problems	14
1.3. Generalized Perturbation Theory	18
1.4. Higher-Order Variational Principles	25
References	30
2. Applications of Variational Estimates and Generalized Perturbation Theory	
2.1. Self-Shielding Factor for an Isolated Slab in a Diffusing Medium	32
2.2. Resonance Absorption of Neutrons	35
2.3. Reactivity Worths and Reaction Rate Ratios in Critical Nuclear Reactors	38
2.4. Nuclear Reactor Kinetics	58
2.5. Controlled Thermonuclear Reactor Blankets	69
2.6. Radiation Shielding	77
2.7. Heterogeneity Reactivity Effects in Nuclear Reactors	85
References	89

3. Variational Formulations

3.1. Linear, Time-Dependent Processes	92
3.2. P_1 Multigroup Neutron Kinetics	100
3.3. Monoenergetic Neutron Transport Theory	109
3.4. Least Squares	112
References	113

4. Synthesis

4.1. Synthesis Approximations—General	116
4.2. Spatial Synthesis in Multigroup Neutron P_1 Theory	119
4.3. Spectral Synthesis in Multigroup Neutron P_1 Theory	141
4.4. Angular Synthesis in Monoenergetic Neutron Transport Theory	146
References	150

5. Variational Theory

5.1. Canonical and Involutory Transformations of Variational Principles	157
5.2. Transformations of the Variational Principles of Reactor Physics	160
5.3. Variational Field Theory	166
References	175

Appendix. Linear Function Spaces and Functionals	177
---	------------

References	178
------------	-----

<i>Index</i>	179
