Contents

PART 1 — GENERAL THEORY OF RANDOM PROCESSES

Chapter 1. Random Functions and Their Statistical Characteristics

1. Random Variables 3
2. Correlation Between Random Variables 10
3. Random Functions 15

Chapter 2. Stationary Random Processes and Spectral Densities

1. Basic Concepts 21
2. Calculation of the Spectral Density by Using the Laplace Transform 26
3. The Random Spectrum and its Relation to the Spectral Density 27
4. Time Averages of Stationary Processes 31
5. Cross-Correlation Functions 35

Chapter 3. Gaussian and Non-Gaussian Random Processes. Quasi-Moment Functions

1. Gaussian Processes and Their Probability Densities 39
2. Conditional Correlation Functions of Gaussian Processes 44
3. Non-Gaussian Processes and Quasi-Moment Functions 47

Chapter 4. Markov Processes and Related Processes

1. Definition of a Markov Process. The Stochastic Equation 55
2. Delta-Correlated Processes 60

3. The Fokker-Planck Equation and the Kolmogorov Equation 62
4. Solutions of the Fokker-Planck Equation 66
5. The Multidimensional Fokker-Planck Equation . . 75
6. First-Passage Time Problems 79
7. Replacement of an Actual Process by a Markov Process. A Special Case 83
8. Replacement of an Actual Process by a Markov Process. The General Case 89
9. Systems of Fluctuation Equations Involving Several Processes 100
10. Gaussian Markov Processes 103
11. Second-Order Fluctuation Equations. Solutions of Special Cases of the Two-Dimensional Fokker-Planck Equation 107
12. Transition from a Markov Process to a Smoothed Process 122
Supplement 126

Chapter 5. Nonstationary Random Processes

1. Processes with Slow Nonstationary Changes . . . 131
2. Switched-On Processes 132
3. Processes with Stationary Increments 133
4. Periodic Nonstationary Processes 139

Chapter 6. Systems of Random Points and Related Random Functions

1. Methods for Describing Systems of Random Points 143
2. Random Functions Constructed from Systems of Random Points 150
3. Poisson Systems of Random Points. Shot Noise . . 153
4. Systems of Random Points Defined by the First Two Moments 159
5. Spectral Densities of Various Pulse Sequences . . 161

Chapter 7. Narrow-Band Random Processes

1. Equivalence of a Narrow-Band Process to a Pair of Slowly Varying Processes 177

2. Narrow-Band Processes Defined by Differential Equations 184
3. The Amplitude and Phase of a Narrow-Band Process. Rayleigh Processes 191
4. Quasi-Rayleigh Processes 198

PART 2 — NONLINEAR TRANSFORMATIONS OF SIGNALS AND NOISE

Chapter 8. Zero-Memory Nonlinear Transformations

1. Transformations of Probability Densities 206
2. Moment Functions for Polynomial Transfer Characteristics 209
3. Moment Functions for Piecewise Linear Transfer Characteristics. The Direct Method 219
4. Moment Functions for Exponential Transfer Characteristics. Rice's Method 233

Chapter 9. Nonlinear Transformations with Memory. Detection of Random Signals

1. Detection of Narrow-Band Processes. The Envelope Method 245
2. The Method of Small Nonlinearity 256
3. The Method of the Fokker-Planck Equation . . . 263
4. Detection of a Sine Wave Plus Noise with a Small Correlation Time 267
5. The Case of Intermediate Correlation Times . . . 271
