<b>Foreword by Benoit B. Mandelbrot . . . . .</b>	<b>v</b>
<b>Preface</b>	<b>vii</b>
<b>1. Introduction . . . . .</b>	<b>1</b>
 <b>PART I. FRACTALS</b>	
<b>2. Fractal geometry</b>	
2.1. Fractals as mathematical and physical objects . . . . .	9
2.2. Definitions	13
2.3. Types of fractals . . . . .	19
2.3.1. Deterministic and random . . . . .	19
2.3.2. Self-affine	33
2.3.3. Fat	43
<b>3. Fractal measures</b>	
3.1. Multifractality . . . . .	48
3.2. Relations among the exponents . . . . .	51
3.3. Fractal measures constructed by recursion . . . . .	55
3.4. Geometrical multifractality . . . . .	63
<b>4. Methods for determining fractal dimensions</b>	
4.1. Measuring fractal dimensions in experiments . . . . .	72
4.2. Evaluation of numerical data . . . . .	79
4.3. Renormalization group . . . . .	86

<b>References</b>	<b>94</b>
-------------------	-----------

## PART II. CLUSTER GROWTH MODELS

<b>5. Local growth models</b>	
5.1. Spreading percolation	103
5.2. Invasion percolation	109
5.3. Kinetic gelation	112
5.4. Random walks	117
5.4.1. Self-intersecting	118
5.4.2. Growing self-avoiding	123
5.4.3. Walks on fractals	130
<b>6. Diffusion-limited growth</b>	
6.1. Diffusion-limited aggregation (DLA)	135
6.1.1. Fractal dimension	137
6.1.2. Anisotropy	144
6.1.3. Theoretical approaches	151
6.1.4. Multifractal scaling	156
6.2. Diffusion-limited deposition	164
6.3. Dielectric breakdown model	172
6.4. Other non-local particle-cluster growth models	175
<b>7. Growing self-affine surfaces</b>	
7.1. Eden model	183
7.2. Ballistic aggregation	190
7.3. Ballistic deposition	194
7.4. Theoretical results	200
<b>8. Cluster-cluster aggregation (CCA)</b>	
8.1. Structure	212
8.1.1. Fractal dimension from simulations	212
8.1.2. Theoretical approaches	220
8.2. Dynamic scaling for the cluster size distribution	223
8.2.1. Diffusion-limited CCA	224

8.2.2. Reaction-limited CCA . . . . .	231
8.2.3. Steady-state and reversible CCA . . . . .	234
8.2.4. Mean-field theories . . . . .	239
8.3. Experiments . . . . .	246
8.3.1. Structure	247
8.3.2. Dynamics	254
<b>References</b>	<b>257</b>

### PART III. FRACTAL PATTERN FORMATION

<b>9. Computer simulations</b>	
9.1. Equations	268
9.2. Models related to diffusion-limited aggregation . . . . .	274
9.2.1. Effects of surface tension . . . . .	276
9.2.2. Noise-reduction in DLA . . . . .	281
9.3. Generalizations of the dielectric breakdown model . . . . .	284
9.4. Boundary integral methods . . . . .	289
<b>10. Experiments on Laplacian growth</b>	
10.1. Viscous fingering	297
10.1.1. The Hele-Shaw cell . . . . .	298
10.1.2. Fractal viscous fingering . . . . .	302
10.1.3. Viscous fingering with anisotropy . . . . .	308
10.2. Crystallization	314
10.3. Electrochemical deposition . . . . .	320
10.4. Other related experiments . . . . .	324
<b>References</b>	<b>330</b>
<b>Appendices</b>	
A. Algorithm for generating diffusion-limited aggregates . . . . .	334
B. Construction of a simple Hele-Shaw cell . . . . .	338
C. Basic concepts underlying multifractal measures . . . . .	340
<b>Author Index . . . . .</b>	<b>345</b>
<b>Subject Index . . . . .</b>	<b>351</b>
