

CONTENTS

CHAPTER I

DEDUCTION OF THE DIFFERENTIAL EQUATIONS

1. Scope of Mathematical Physics. Time and Space	1
2. Continuity. Analytic Functions	2
3. Vectors. Scalar and Vector Product	4
4. Scalar and Vector Functions. Gradient	8
5. Invariants	10
6. Linear infinitesimal Deformation. Divergence. Curl	12
7. Lamellar and Solenoidal Vector Fields	17
8. Divergence Theorem	19
9. Notation of Hyperspace	22
10. Flow of Heat and Electricity	23
11. Principles of Mechanics	24
12. Equation of Hydrodynamics and Sound	27
13. Equations of Elasticity	33
13a. Viscous Fluids	38
14. Equation for Transverse Vibrations of Rod	39
15. Flow of Electricity in Wires ..	44
16. Stokes's Curl Theorem	46
17. Maxwell's Equations of the Electromagnetic Field	48
18. Recapitulation of Equations ...	53

CHAPTER II

EQUATIONS OF THE FIRST ORDER

19. Definition of Partial Differential Equation	54
20. Geometrical Interpretation	55
21. Cauchy's Problem	57
22. Linear Equations, Characteristics	58
23. Classification of Integrals	63
24. Method of Characteristics	66

CHAPTER III

WAVE EQUATION. VIBRATIONS AND NORMAL FUNCTIONS

25. Euler's Equation. Three Types	74
26. Equation of String. Waves	76
27. String with Fixed Ends	79
28. Theory of Small Vibrations	83
29. Normal Coordinates	88
30. Inverse Method	89
31. Vibration of String of Beads ..	91
32. Continuous String. Rayleigh's Principle	93
33. Determination of Coefficients. Fourier's Series	97
34. Forced Vibrations. Resonance ..	105
35. Point-Source. Green's Function ..	109
36. Forced Vibration. General Source. Integral Equation	112
37. Normal Functions. Bilinear Formula	115
38. Solution of Integral Equation ..	117
39. Other Boundary Conditions	120
40. More General Differential and Integral Equation	130
41. Transverse Vibrations of a Bar ..	138

CHAPTER IV

FOURIER'S SERIES AND INTEGRAL. CAUCHY'S METHOD. INITIAL DATA

42. Convergence of Fourier's Series ..	142
43. Fourier's Integral	153
44. Cauchy's Method of Integration. Wave-equation	160
45. Equation of Heat Conduction ..	166
46. Equation of Telegraphy	173
47. Periodic Waves in Various Cases ..	179
48. Standing Waves. Normal Functions	182
49. Wave Equation in two Dimensions	187

CHAPTER V

METHODS OF GREEN. POTENTIALS. BOUNDARY PROBLEMS

50. Divergence Theorem.....	188
51. Newtonian Fields. Gauss's Theorem	190
52. Green's Theorem	193
53. Newtonian Potential.....	193
54. Poisson's Equation	196
55. Logarithmic Potential	200
56. Surface Distributions	201
57. Double Surface Layers.....	203
58. Surface Discontinuities.....	205
59. Green's formula.....	207
60. Dirichlet's Problem.....	210
61. Wave-equation.....	211
62. Wave Potential. Huygen's Principle	213
63. Lorenz's Equation	216
64. Beltrami's Theorem	217
65. Helmholtz's Equation.....	219
66. Green's Function.....	222
67. Examples of Green's Function.	224
68. Forced Vibrations. Integral Equations	226
69. Infinite Region.....	234

CHAPTER VI

METHOD OF RIEMANN-VOLTERRA. CHARACTERISTICS

70. Cauchy's Problem. Characteristics	239
71. Linear Equation. Green's Theorem	244
72. Elliptic Equation.....	247
73. Hyperbolic Equation.....	248
74. Telegraphist's Equation.....	253
75. Lorentz's Equation	255
76. Equation in n Variables	257
77. Green's Theorem and Characteristics for n Dimensions	263
78. Volterra's Method for Wave-Equation	266
79. Volterra's Method for Equation of Damped Waves in Space...	274
80. Hadamard's Method. Fundamental Solutions.....	277
81. Propagation of Discontinuities.	280
82. Discontinuity of the first order	283

83. Discontinuity of second order.	286
84. Hugoniot's Theorem for Velocity	288
85. Propagation in one Dimension. Characteristics	290

CHAPTER VII

SPHERICAL, CYLINDRICAL AND ELLIPSOIDAL HARMONICS

86. Definition of Spherical Harmonics	294
87. Dirichlet's Problem for Sphere.	296
88. Forms of Spherical Harmonics.	297
89. Zonal Harmonics.....	298
90. Orthogonal Coordinates	299
91. Harmonics in Spherical Coordinates	302
92. Legendre's Polynomials	304
93. Various Forms for Zonal Harmonic	306
94. Relations between neighbouring Harmonics	310
95. Associated Functions	311
96. General Harmonics	313
97. Integral Relations	315
98. Development in Spherical Harmonics	316
99. Convergence of Series	318
100. Definition of Bessel Functions	320
101. Bessel's Equation.....	323
102. Bessel's Functions as Definite Integrals	327
103. Cylindrical Coordinates	330
104. Laplacian in Ellipsoidal Coordinates	331
105. Lamé's Equation	333
106. Development in Lamé's Functions	338
107. Convergence of Series	340
108. Surfaces of Revolution.....	342

CHAPTER VIII

APPLICATIONS OF SPHERICAL, CYLINDRICAL AND ELLIPSOIDAL HARMONICS

109. Zonal Harmonics. Attraction of Circular Wire	346
110. Potential of Disc and Current	346
111. Potential of thin Spherical Shell.....	347
112. Potential of Body of any Shape	348

113. Hydrokinetic Applications....	350	125. Algebraic Problem.....	379
114. Helmholtz's Equation.....	353	126. Transcendental Problem.....	382
115. Vibrations of Circular Plate..	355	127. Fredholm's Formulae.....	387
116. Spherical Vibrations.....	356	128. Solution by Iteration.....	387
117. Progressive Spherical Waves .	360	129. Characteristic Numbers .. .	390
118. Waves from Ellipsoids of Re- volution.....	362	130. Hilbert's Theorem.....	392
119. Neumann's Addition Theorem for Bessel Functions.....	363	131. Development in Series of Nor- mal Functions.....	393
120. Definitive Integrals.....	364		
121. Potentials of Symmetrical Bodies.....	367		
122. Beltrami's Symmetrical Poten- tials.....	368		
123. Method for Definite Integrals.	375		
CHAPTER IX			
THEORY OF INTEGRAL			
EQUATIONS			
124. Integral Equations for Boun- dary Problems.....	378		

APPENDIX

1. Jacobians.....	395
2. Double Limits.....	396
3. Uniform Convergence.....	399
4. Definite Integrals.....	401
5. Complex Variable.....	406
6. Linear Differential Equations...	433
