<b>Preface</b>	<b>v</b>
<b>1 Introduction, Motivation, and Background</b>	<b>1</b>
1.1 Examples of the Use of Invariant Manifold Ideas and Methods in Applications . . . . .	1
1.2 Issues and Methods . . . . .	4
1.2.1 Existence of Invariant Manifolds . . . . .	5
1.2.2 The Persistence and Differentiability of Invariant Manifolds Under Perturbation . . . . .	5
1.2.3 Behavior Near an Invariant Manifold—Stable, Unstable, and Center Manifolds . . . . .	6
1.2.4 More Refined Behavior Near Invariant Manifolds—Foliations of Stable, Unstable, and Center Manifolds	7
1.2.5 The Liapunov–Perron Method . . . . .	7
1.2.6 Hadamard’s Method—The Graph Transform . . . . .	8
1.2.7 The Lie Transform, or Deformation Method . . . . .	8
1.2.8 Irwin’s Method . . . . .	9
1.3 Motivational Examples . . . . .	9
<b>2 Background from the Theory of Differentiable Manifolds</b>	<b>21</b>
2.1 The Definition of a “Manifold” and Examples . . . . .	21
2.2 Derivatives, Tangent Spaces, Normal Spaces, and Other “Structures” on Manifolds . . . . .	28
2.2.1 The Normal Space at a Point . . . . .	33
2.2.2 Tangent Bundles and Normal Bundles . . . . .	34
2.2.3 The Neighborhood of a Manifold . . . . .	36
2.3 Manifolds with Boundary . . . . .	39
2.4 An Example . . . . .	41
<b>3 Persistence of Overflowing Invariant Manifolds—Fenichel’s Theorem</b>	<b>51</b>
3.1 Overflowing Invariant Manifolds and Generalized Lyapunov-Type Numbers . . . . .	56
3.1.1 “Stability” of $M$ and Generalized Lyapunov-Type Numbers	57

3.1.2	Some Properties of Generalized Lyapunov-Type Numbers	62
3.2	Coordinates and Dynamics Near $\bar{M}$	70
3.2.1	Local Coordinates Near $\bar{M}$	70
3.2.2	“Jiggling” the Normal Bundle to Gain a Derivative, and the Construction of a Neighborhood of $M_1$	72
3.2.3	Local Expressions for the Time- $T$ Map Generated by the Flow	74
3.2.4	The Perturbed Vector Field and Flow	79
3.2.5	Smallness and Closeness Parameters	81
3.2.6	The Space of Sections of the Transversal Bundle	81
3.2.7	The Graph Transform	81
3.3	Statement and Proof of the Main Theorem	85
3.3.1	Differentiability of the Persisting Overflowing Invariant Manifold	92
<b>4</b>	<b>The Unstable Manifold of an Overflowing Invariant Manifold</b>	<b>111</b>
4.1	Generalized Lyapunov-Type Numbers	111
4.2	Local Coordinates Near $M$	114
4.3	The GR-I Estimates	116
4.4	The Space of Sections of $N'_\epsilon _{\cup_{i=1}^s U_i^3}$ over $N'^u_\epsilon _{\cup_{i=1}^s U_i^3}$	119
4.5	The Unstable Manifold Theorem	120
4.5.1	Differentiability of $W^u(\bar{M})$	128
4.5.2	$W^u(\bar{M})$ Satisfies the Hypotheses of the Persistence Theorem for Overflowing Invariant Manifolds	129
<b>5</b>	<b>Foliations of Unstable Manifolds</b>	<b>131</b>
5.1	Generalized Lypaunov-Type Numbers	131
5.2	Local Coordinates Near $M$	134
5.3	The GR-I Estimates	134
5.4	The Space of Families of $u$ -Dimensional Lipschitz Surfaces	135
5.5	Sequences of Contraction Maps	136
5.6	The Theorem on Foliations of Unstable Manifolds	138
5.6.1	The Proof of the Theorem	139
5.7	Persistence of the Fibers Under Perturbations	157
<b>6</b>	<b>Miscellaneous Properties and Results</b>	<b>159</b>
6.1	Inflowing Invariant Manifolds	159
6.2	Compact, Boundaryless Invariant Manifolds	159
6.3	Boundary Modifications	160
6.4	Parameter-Dependent Vector Fields	162
6.5	Continuation of Overflowing Invariant Manifolds—The “Size” of the Perturbation	163
6.6	Discrete Time Dynamics, or “Maps”	163

<b>7 Examples</b>	<b>165</b>
7.1 Invariant Manifolds Near a Hyperbolic Fixed Point . . . . .	165
7.2 Invariant Manifolds Near a Nonhyperbolic Fixed Point . . . . .	166
7.3 Weak Hyperbolicity . . . . .	168
7.4 Asymptotic Expansions for Invariant Manifolds . . . . .	170
7.5 The Invariant Manifold Structure Associated with the Study of Orbits Homoclinic to Resonances . . . . .	171
7.5.1 The Analytic and Geometric Structure of the Unperturbed Equations . . . . .	172
7.5.2 The Analytic and Geometric Structure of the Perturbed Equations . . . . .	174
