

TABLE OF CONTENTS

PREFACE

CHAPTER I. SOME CONCEPTS FROM CALCULUS AND ORDINARY DIFFERENTIAL EQUATIONS

1.	Sets and functions.	1
2.	Surfaces and their normals. The implicit function theorem.	5
3.	Curves and their tangents.	11
4.	The initial value problem for ordinary differential equations and systems.	16
	References for Chapter I.	23

CHAPTER II. INTEGRAL CURVES AND SURFACES OF VECTOR FIELDS ...

1.	Integral curves of vector fields.	24
2.	Methods of solution of $dx/P = dy/Q = dz/R$	35
3.	The general solution of $Pu_x + Qu_y + Ru_z = 0$	41
4.	Construction of an integral surface of a vector field containing a given curve.	44
5.	Applications to plasma physics and to solenoidal vector fields.	51
	References for Chapter II.	56

CHAPTER III. THEORY AND APPLICATIONS OF QUASI-LINEAR AND LINEAR EQUATIONS OF FIRST ORDER

1.	First order partial differential equations.	57
2.	The general integral of $Pz_x + Qz_y = R$	59
3.	The initial value problem for quasi-linear first order equations. Existence and uniqueness of solution.	64
4.	The initial value problem for quasi-linear first order equations. Nonexistence and nonuniqueness of solutions.	69
5.	The initial value problem for conservation laws. The development of shocks.	72
6.	Applications to problems in traffic flow and gas dynamics.	76
7.	The method of probability generating functions. Applications to a trunking problem in a telephone network and to the control of a tropical disease.	86
	References for Chapter III.	95

CHAPTER IV. SERIES SOLUTIONS. THE CAUCHY-KOVALEVSKY THEOREM	96
1. Taylor series. Analytic functions.	96
2. The Cauchy-Kovalevsky theorem.	100
References for Chapter IV.	111
CHAPTER V. LINEAR PARTIAL DIFFERENTIAL EQUATIONS. CHARACTERISTICS, CLASSIFICATION AND CANONICAL FORMS	112
1. Linear partial differential operators and their characteristic curves and surfaces.	112
2. Methods for finding characteristic curves and surfaces. Examples.	117
3. The importance of characteristics. A very simple example. ..	124
4. The initial value problem for linear first order equations in two independent variables.	126
5. The general Cauchy problem. The Cauchy-Kovalevsky theorem and Holmgren's uniqueness theorem.	132
6. Canonical form of first order equations.	133
7. Classification and canonical forms of second order equations in two independent variables.	137
8. Second order equations in two or more independent variables.	143
9. The principle of superposition.	149
Reference for Chapter V.	152
CHAPTER VI. EQUATIONS OF MATHEMATICAL PHYSICS	153
1. The divergence theorem and the Green's identities.	153
2. The equation of heat conduction.	156
3. Laplace's equation.	161
4. The wave equation.	162
5. Well-posed problems.	166
Reference for Chapter VI.	170
CHAPTER VII. LAPLACE'S EQUATION	171
1. Harmonic functions.	172
2. Some elementary harmonic functions. The method of separation of variables.	173

3. Changes of variables yielding new harmonic functions. Inversion with respect to circles and spheres.	179
4. Boundary value problems associated with Laplace's equation.	186
5. A representation theorem. The mean value property and the maximum principle for harmonic functions.	191
6. The well-posedness of the Dirichlet problem.	197
7. Solution of the Dirichlet problem for the unit disc. Fourier series and Poisson's integral.	199
8. Introduction to Fourier series.	206
9. Solution of the Dirichlet problem using Green's functions.	223
10. The Green's function and the solution to the Dirichlet problem for a ball in R^3	226
11. Further properties of harmonic functions.	232
12. The Dirichlet problem in unbounded domains.	235
13. Determination of the Green's function by the method of electrostatic images.	240
14. Analytic functions of a complex variable and Laplace's equation in two dimensions.	245
15. The method of finite differences.	249
16. The Neumann problem.	257
References for Chapter VII.	260

CHAPTER VIII. THE WAVE EQUATION 261

1. Some solutions of the wave equation. Plane and spherical waves.	262
2. The initial value problem.	271
3. The domain of dependence inequality. The energy method.	274
4. Uniqueness in the initial value problem. Domain of dependence and range of influence. Conservation of energy.	280
5. Solution of the initial value problem. Kirchhoff's formula. The method of descent.	284
6. Discussion of the solution of the initial value problem. Huygens' principle. Diffusion of waves.	291
7. Wave propagation in regions with boundaries. Uniqueness of solution of the initial-boundary value problem. Reflection of waves.	299
8. The vibrating string.	308
9. Vibrations of a rectangular membrane.	317
10. Vibrations in finite regions. The general method of separation of variables and eigenfunction expansions. Vibrations of a circular membrane.	322
References for Chapter VIII.	330

CHAPTER IX. THE HEAT EQUATION 331

1. Heat conduction in a finite rod. The maximum-minimum principle and its consequences.	331
2. Solution of the initial-boundary value problem for the one-dimensional heat equation.	336

3. The initial value problem for the one-dimensional heat equation.	343
4. Heat conduction in more than one space dimension.	349
5. An application to transistor theory.	353
References for Chapter IX.	356
CHAPTER X. SYSTEMS OF FIRST ORDER LINEAR AND QUASI-LINEAR EQUATIONS	357
1. Examples of systems. Matrix notation.	357
2. Linear hyperbolic systems. Reduction to canonical form.	361
3. The method of characteristics for linear hyperbolic systems. Application to electrical transmission lines.	367
4. Quasi-linear hyperbolic systems.	380
5. One-dimensional isentropic flow of an inviscid gas. Simple waves.	381
References for Chapter X.	391
GUIDE TO FURTHER STUDY	392
BIBLIOGRAPHY FOR FURTHER STUDY	395
ANSWERS TO SELECTED PROBLEMS	397
INDEX	401
