# CONTENTS

| | | |
|---|---|---|
| **Preface** | | **v** |
| **Chapter 1.** | **Introduction** | **1** |
| **Chapter 2.** | **The Chance on Stage** | **9** |
| 2.1. | Classical Probability | 9 |
| 2.2. | Probability as a Measure | 13 |
| 2.3. | The Central Limit Theorem | 19 |
| 2.4. | The Least Squares Method | 23 |
| 2.5. | Random Functions, Fields, and Operators | 30 |
| 2.6. | Ergodic Properties, Chaos, Intermittency | 34 |
| 2.7. | Equilibrium and Transition Probability | 41 |
| 2.8. | Spatial Distribution of Particles in Gases | 45 |
| **Chapter 3.** | **Diffusion** | **49** |
| 3.1. | The Diffusion Coefficient | 49 |
| 3.2. | Solutions of the Diffusion Equation | 55 |
| 3.3. | Diffusion in Infinite Space and Green's Function | 60 |
| 3.4. | Probabilistic Interpretation of Diffusion | 61 |
| 3.5. | Diffusion in External Force Field | 65 |
| 3.6. | Osmotic Pressure | 71 |
| 3.7. | On Reversibility of Diffusion in Time | 78 |
| **Chapter 4.** | **The Brownian Motion** | **81** |
| 4.1. | Einstein's Description of Brownian Motion | 83 |
| 4.2. | The Wiener Path | 85 |
| 4.3. | Averaging over Paths | 89 |
| 4.4. | The Wiener and Feynman Integrals | 92 |

4.5. The White Noise 99
4.6. The Ornstein-Uhlenbeck Process 101

**Chapter 5. Fractals and Dimensions 103**
5.1. Historical Perspective 103
5.2. Fractals: Thick Lines 109
5.3. Fractals: Thick Surfaces 117
5.4. Fractals: A Foamy Space-Time 119
5.5. Fractals: Contour Lines 121
5.6. Fractals: Dense Point Set 122
5.7. Fractals and Self-Similarity 124
5.8. Strange Attractors 126
5.9. Measuring the Attractor Dimension 131

**Chapter 6. Percolation and Random Boundaries 139**
6.1. Clusters and Percolation 139
6.2. Intermittency and Percolation 146
6.3. Eigen-Oscillations of a Region with Random Boundary 151
6.4. The Zeros of Eigenfunctions of Free and Forced Oscillations 155
6.5. The Mathematical Language of the Percolation Theory 159

**Chapter 7. Random Hydrodynamic Motions 165**
7.1. The Turbulent Flow whose Velocity is Laminar 165
7.2. The Role of Chance in Transition to Turbulence 168
7.3. The Developed Turbulence 171
7.4. Internal Structure and Fractal Properties of Developed Turbulence 174
7.5. Temperature Spots in Random Flow 176

**Chapter 8. General Conception of Intermittency 185**
8.1. Intermittency of a Random Quantity 185
8.2. Evolution of a Random Quantity 188
8.3. A Random Medium 190
8.4. The Short-Correlated Random Medium 195
8.5. Intermittency in Non-Stationary Medium 198
8.6. Structure of the Moments of a Scalar Field in Random Medium 201

8.7. Vorticity and Deformations in a Flow of Incompressible Fluid 209
8.8. Vortex Filaments in Hydrodynamics 213
8.9. Intermittency in Nonlinear Media 215
8.10. Propagation of Field Fronts in Random Media 221
8.11. The Intermittent World 225

**Chapter 9. Magnetic Field in a Flow of Conductive Fluid 237**
9.1. The Kinematic Dynamo Problem 237
9.2. The Short-Correlated Random Flow 243
9.3. Generation of the Mean Magnetic Field 245
9.4. Fluctuations of Helicity 249
9.5. Higher Statistical Moments and Intermittency in the Fast Dynamo 252
9.6. Structure of the Magnetic Field 256
9.7. The Typical Structure of Magnetic Field 267
9.8. Self-Excitation of Magnetic Fields in Finite Bodies 273
9.9. Magnetic Field Intermittency with Account of the Lorentz Force 276
9.10. The Dynamo Theorem 281

**Chapter 10. The Casual Universe 287**
10.1. The Universe 287
10.2. Conservation of Charges 289
10.3. Conservation of Energy 293
10.4. The Astrophysical Consequences. Is the Pulsating Universe Inevitable? 295
10.5. The Spontaneous Formation 298

**Epilogue. The Birth of "Divinamics" 303**

**References 305**
