

CONTENTS

Foreword	
Hans Mark and Lowell Wood	1
An Appreciation	
Eugene P. Wigner	7

PHYSICS

On the prevalence of the Gamow-Teller transition	
Stewart D. Bloom	15
The light nuclei	
Fay Ajzenberg-Selove	39
Nuclear giant resonances – a historical review	
B. L. Berman	49
Calculating the interaction between atomic nuclei	
M. S. Weiss	87
Nanosecond matter	
John A. Wheeler	101
Prospects for further unification	
Yuval Ne’eman	129
Relativistic radiation hydrodynamics: Introducing the Landau number	
George F. Chapline and Alex Granik	149
Inertial confinement fusion	
John H. Nuckolls and Lowell Wood	157

PLANETARY PHYSICAL ASTROPHYSICS

The computational physics of the global atmosphere	
C. E. Leith	161
Stellar X-ray sources	
J. I. Katz	175

NEW TECHNOLOGIES

Biomicroholography: An emerging technology
Johndale C. Solem and George F. Chapline

207

Nuclear explosives as an engineering tool
Wilson K. Talley and Carl R. Gerber

221

Advances in laser isotope separation
Irving P. Herman and Anthony F. Bernhardt

237

Earthbreak: A review of earth-to-space transportation
Roderick A. Hyde

283

EXISTING AND POTENTIAL WEAPONS

The development of nuclear explosives
Lowell Wood and John Nuckolls

311

The branch laboratory at Livermore during the 1950's
Duane C. Sewell

319

The future of the weapons laboratories
John S. Foster Jr. and Thomas H. Johnson

327

Properties and applications of intense relativistic electron beams
Richard J. Briggs

339

Development and application of advanced high energy lasers
G. H. Canavan, R. O. Hunter Jr. and A. M. Hunter II

367

PERSONAL

Teller's campaign for openness
Arthur Kantrowitz

387

National labs and national leadership
Dr. George A. Keyworth II

391

Two Villanelles for Edward on his eightieth birthday
Tom Johnson

401
