Preface v

Section 1 GENERAL INFORMATION 1

Introduction to the use of tables, linear interpolation, and logarithms	3
Trigonometric identities	8
Differentiation formulas	11
Power-series expansions	12
Tables of indefinite and definite integrals	13
Units, conversion factors, and physical constants	52
Table 1-1. Temperature-conversion table	56
Numerical constants	58

Section 2 FOUR-PLACE TABLES FOR QUICK REFERENCE 59

Table 2-1. Common logarithms of numbers	60
Table 2-2. Natural sines and cosines	62
Table 2-3. Natural tangents and cotangents	64
Table 2-4. Logarithms of sines and cosines	66
Table 2-5. Logarithms of tangents and cotangents	68

Section 3 BASIC LOGARITHM TABLES 71

Table 3-1. Five-place common logarithms of numbers	72
Table 3-2. Common logarithms of trigonometric functions	90

Section 4 MISCELLANEOUS NUMERICAL TABLES 135

Table 4-1. Common logarithms of trigonometric functions (radian measure)	136
Table 4-2a. Degrees, minutes, and seconds to radians	143
Table 4-2b. Radians to degrees, minutes, and seconds	144
Table 4-3. Decimal equivalents of minutes, seconds, and common fractions	145

Contents

Table 4-4. Squares, cubes, square and cube roots, circumferences, and areas	146
Table 4-5. Natural logarithms	162
Table 4-6. Values and logarithms of exponential and hyperbolic functions	165
Table 4-7. Bessel functions	172
Table 4-8. Legendre polynomials	195
Table 4-9. Normal-curve ordinates	196
Table 4-10. Normal-distribution areas	197
Table 4-11. Probability function or error integral	198
Normal frequency and distribution functions	199
Table 4-12. Compound interest factors	200
Table 4-13. Distribution of χ^2	207
Table 4-14. Distribution of t	208
Table 4-15. Fourier coefficients and mean-square values of periodic functions	209
Table 4-16. Fourier-transform pairs	210
Table 4-17. Theorems relating corresponding operations on functions and on their Laplace transforms	211
Table 4-18. Laplace-transform pairs involving rational algebraic functions	213
Table 4-19. Table of Laplace transforms	222
Table 4-20. Properties of the Fourier transform	230
Table 4-21. Formulas from vector analysis	231
Table 4-22. Hyperbolic functions and related formulas	233
Table 4-23. Conversion factors between mks (practical), cgs electrostatic (esu), and cgs electromagnetic (emu) systems of units	234

Section 5 MECHANICS 237

Table 5-1. Planetary orbits	239
Table 5-2. The planets and the moon	240
Table 5-3. Miscellaneous astronomical constants	240
Table 5-4. Moments of inertia	241
Table 5-5. Density of common solids at 20°C	243
Table 5-6. Lattice constants of standard crystals	244
Table 5-7. Linear and volume expansion	245
Table 5-8. Typical mechanical properties of metals at room temperature	248
Table 5-9. Elastic constants of metals	249
Table 5-10. Coefficients of static and sliding friction	250
Vector kinematics	251
Special relativity	254

Section 6 ATOMIC PHYSICS 255

Table 6-1. General atomic constants	257
Table 6-2. Periodic chart of the elements	258
Table 6-3. Electronic properties of atoms	259
Table 6-4. Properties of the elements	262

Table 6-5. Some physical properties of the elements	266
Table 6-6. X-ray terms for various elements	269
Table 6-7. Electromotive force series for some elements	270
Table 6-8. Physical properties of inorganic compounds	271
Table 6-9. Physical properties of organic compounds	280
Table 6-10. The electromagnetic spectrum	284

Section 7 THERMAL PROPERTIES OF MATTER 285

Table 7-1. Mean specific heats of various solids and liquids	287
Table 7-2. Thermal properties of metals	288
Table 7-3. Thermal conductivity and density of structural, insulating, and miscellaneous materials	291
Table 7-4. Properties of water (saturated liquid)	292
Table 7-5. Properties of saturated liquids	293
Table 7-6. Properties of air at atmospheric pressure	296
Table 7-7. Properties of carbon dioxide, nitrogen, and oxygen at atmospheric pressure	297
Table 7-8. Conversion table for heat flux	298
Table 7-9. Thermal conductivity k	298
Table 7-10. Entropy change accompanying fusion at the normal melting point	299
Table 7-11. Heat of sublimation, in kcal/mole	300
Table 7-12. Useful fixed points in low-temperature physics	301
Table 7-13. Critical data	302
Table 7-14. Triple-point data	303

Section 8 THERMODYNAMICS 305

Table 8-1. Thermodynamic systems and coordinates	307
Table 8-2. Work done by thermodynamic systems	307
Table 8-3. Definitions and symbols for thermal quantities	308
Table 8-4. Thermodynamic formulas for a chemical system of constant mass	309
Table 8-5. First derivatives of T , P , V , and S	310
Table 8-6. C_v (Einstein)	311
Table 8-7. C_v (Debye)	312
Table 8-8. Debye temperatures of several materials (in degrees Kelvin)	313

Section 9 ELECTRICITY AND MAGNETISM 315

Fundamental formulas of Electricity and Magnetism	317
Table 9-1. Typical values of electrical conductivity	318
Table 9-2. Electrical and thermal conductivities of metals	319
Table 9-3. Critical fields and temperatures of some superconductors	320
Table 9-4. Typical values of the relative capacitivity	321
Table 9-5. Typical values of the relative inductivity	321
Table 9-6. Typical ferromagnetic properties	322
Table 9-7. Typical ferroelectric properties	323

Contents

Table 9-8. Hall constant and mobility for some metals	323
Table 9-9. Fermi energy and effective mass for some metals	325
Table 9-10. Properties of important semiconducting materials	326
Table 9-11. Representative piezoelectric crystals	327

Section 10 ACOUSTICS AND OPTICS 329

Table 10-1. Speed of sound in gases	331
Table 10-2. Elastic constants, wave velocities, and characteristic impedances of metals, glasses, and plastics	332
Table 10-3. Frequencies of the equally tempered scale, based on the international standard A = 440 cps	333
Table 10-4. Absorption coefficients for building materials	334
Table 10-5. Refractive indices of typical optical media for four colors	335
Table 10-6. The principal indices of calcite and quartz at 18°C	336
Table 10-7. Wavelengths, in angstroms, of some useful spectral lines	337
Table 10-8. Comparison of the Fraunhofer diffraction patterns of a circular aperture and a single slit	338
Table 10-9. Table of Fresnel integrals	339

Section 11 NUCLEAR PROPERTIES 341

Table 11-1. Properties of stable nuclei	343
Figure 11.1. Chart of the stable nuclides	351
Figure 11.2. The natural radioactive series	352
Figure 11.3. High-energy particle nomograph	353
Table 11-2. Short list of elementary particles	354

Index	356
