

# HISTORY OF PHYSICS

Edited by

Spencer R. Weart  
Center for History of Physics  
American Institute of Physics

Melba Phillips  
Emeritus Professor of Physics  
University of Chicago

## Table of Contents

v	<b>INTRODUCTION</b>	
x	<b>Author Affiliations</b>	
1	<b>CHAPTER 1: BEFORE OUR TIMES</b>	
2	The prehistory of solid-state physics . . . . .	<i>Cyril Stanley Smith</i>
12	Franklin's physics . . . . .	<i>John L. Heilbron</i>
18	A sketch for a history of early thermodynamics . . . . .	<i>E. Mendoza</i>
25	A sketch for a history of the kinetic theory of gases . . . . .	<i>E. Mendoza</i>
29	Rowland's physics . . . . .	<i>John D. Miller</i>
36	Michelson and his interferometer . . . . .	<i>Robert S. Shankland</i>
42	Poincaré and cosmic evolution . . . . .	<i>Stephen G. Brush</i>
50	Steps toward the Hertzsprung–Russell Diagram . . . . .	<i>David H. DeVorkin</i>
59	<b>CHAPTER 2: INSTITUTIONS OF PHYSICS</b>	
61	The roots of solid-state research at Bell Labs . . . . .	<i>Lillian Hartmann Hoddeson</i>
68	Some personal experiences in the international coordination of crystal diffractometry . . . . .	<i>P. P. Ewald</i>
74	The founding of the American Institute of Physics . . . . .	<i>Karl T. Compton</i>
78	The first fifty years of the AAPT . . . . .	<i>Melba Phillips</i>
86	The giant cancer tube and the Kellogg Radiation Laboratory . . . . .	<i>Charles H. Holbrow</i>
94	The evolution of the Office of Naval Research . . . . .	<i>The Bird Dogs</i>
101	<b>CHAPTER 3: SOCIAL CONTEXT</b>	
103	Nagaoka to Rutherford, 22 February 1911 . . . . .	<i>Lawrence Badash</i>
108	American physics and the origins of electrical engineering . . . . .	<i>Robert Rosenberg</i>
115	Physics in the Great Depression . . . . .	<i>Charles Weiner</i>
123	Scientists with a secret . . . . .	<i>Spencer R. Weart</i>
130	Some thoughts on science in the Federal government . . . . .	<i>Edward U. Condon</i>
138	Fifty years of physics education . . . . .	<i>A. P. French</i>
149	Women in physics: unnecessary, injurious and out of place? . . . . .	<i>Vera Kistiakowsky</i>
159	The last fifty years—A revolution? . . . . .	<i>Spencer R. Weart</i>

171	<b>CHAPTER 4: BIOGRAPHY</b>	
173	The two Ernests . . . . .	<i>Mark L. Oliphant</i>
194	Van Vleck and magnetism . . . . .	<i>Philip W. Anderson</i>
198	Alfred Lee Loomis—last great amateur of science . . . . .	<i>Luis W. Alvarez</i>
208	Harold Urey and the discovery of deuterium . . . . .	<i>Ferdinand G. Brickwedde</i>
214	Pyotr Kapitza, octogenarian dissident . . . . .	<i>Grace Marmor Spruch</i>
221	The young Oppenheimer: Letters and recollections . . . . .	<i>Alice Kimball Smith</i> <i>and Charles Weiner</i>
228	Maria Goeppert Mayer—two-fold pioneer . . . . .	<i>Robert G. Sachs</i>
234	Philip Morrison—A profile . . . . .	<i>Anne Eisenberg</i>
241	<b>CHAPTER 5: PERSONAL ACCOUNTS</b>	
243	How I created the theory of relativity . . . . .	<i>Albert Einstein</i>
246	It might as well be spin . . . . .	<i>Samuel A. Goudsmit and</i> <i>George E. Uhlenbeck</i>
255	History of the cyclotron. Part I . . . . .	<i>M. Stanley Livingston</i>
261	History of the cyclotron. Part II . . . . .	<i>Edwin M. McMillan</i>
272	The discovery of fission . . . . .	<i>Otto R. Frisch and</i> <i>John A. Wheeler</i>
282	Physics at Columbia University . . . . .	<i>Enrico Fermi</i>
287	<b>CHAPTER 6: PARTICLES AND QUANTA</b>	
289	J. J. Thomson and the discovery of the electron . . . . .	<i>George P. Thomson</i>
294	Thermodynamics and quanta in Planck's work . . . . .	<i>Martin J. Klein</i>
303	J. J. Thomson and the Bohr atom . . . . .	<i>John L. Heilbron</i>
310	Sixty years of quantum physics . . . . .	<i>Edward U. Condon</i>
319	Heisenberg and the early days of quantum mechanics . . . . .	<i>Felix Bloch</i>
324	Electron diffraction: Fifty years ago . . . . .	<i>Richard K. Gehrenbeck</i>
332	1932—Moving into the new physics . . . . .	<i>Charles Weiner</i>
340	The idea of the neutrino . . . . .	<i>Laurie M. Brown</i>
346	The birth of elementary-particle physics . . . . .	<i>Laurie M. Brown and</i> <i>Lillian Hartmann Hoddeson</i>
354	The discovery of electron tunneling into superconductors . . . . .	<i>Roland W. Schmitt</i>
358	The development of field theory in the last fifty years . . . . .	<i>Victor F. Weisskopf</i>
