

CONTENTS

<p>1 The pendulum 1</p> <p>2 Two coupled pendulums. Normal modes. Beats 5</p> <p>3 Configuration space. Degrees of freedom. Phase space 13</p> <p>4 Inertial systems. The Galilei space 20</p> <p>5 The Einstein–Minkowski space 26</p> <p>6 The Lorentz transformation 35</p> <p>7 Relativistic mechanics 45</p> <p>8 Gravitation. Vector fields. The theorems of Gauss and Stokes 53</p> <p>9 Hamilton’s equations. Lagrange’s equations 68</p> <p>10 Rotational motion of rigid bodies round a fixed axis 82</p> <p>11 Statics 98</p> <p style="padding-left: 20px;">1. Frames 98</p> <p style="padding-left: 20px;">2. Rigid bodies 108</p> <p>12 Elements of elasticity 116</p> <p style="padding-left: 20px;">1. Preliminaries on beams 116</p> <p style="padding-left: 20px;">2. The stress tensor 116</p> <p style="padding-left: 20px;">3. The strain tensor 122</p> <p>13 Elastostatics 125</p> <p style="padding-left: 20px;">1. Hooke’s law 125</p> <p style="padding-left: 20px;">2. The basic equation of elastostatics 130</p> <p style="padding-left: 20px;">3. The torsion of a rod 132</p> <p style="padding-left: 20px;">4. Bending moment and shearing force in beams 137</p> <p style="padding-left: 20px;">5. The stress and strain tensors of the loaded beam 142</p> <p style="padding-left: 20px;">6. Integration of the differential equation of the elastic line 149</p> <p style="padding-left: 20px;">7. Reinforced and prestressed concrete beams 152</p> <p>14 Further development of statics and passage to dynamics 158</p> <p style="padding-left: 20px;">1. The principle of virtual work 158</p> <p style="padding-left: 20px;">2. Friction 165</p>	<p style="padding-left: 20px;">3. D’Alembert’s principle 170</p> <p style="padding-left: 20px;">4. The principles of Jourdain and Gauss 172</p> <p style="padding-left: 20px;">5. Laws of conservation and their relation to D’Alembert’s principle 174</p> <p style="padding-left: 20px;">6. Derivation of Lagrange’s equations and of Hamilton’s equations 187</p> <p>15 Non-inertial frames of reference 191</p> <p>16 Three-dimensional rotations of a rigid body around a fixed point 200</p> <p style="padding-left: 20px;">1. Rotations and translations of a rigid body 200</p> <p style="padding-left: 20px;">2. The torque-free case: general top 205</p> <p style="padding-left: 40px;">(a) The kinetic energy 205</p> <p style="padding-left: 40px;">(b) The angular momentum 209</p> <p>17 Dynamics of a top 213</p> <p style="padding-left: 20px;">1. Euler’s equations 213</p> <p style="padding-left: 20px;">2. The torque-free case: general top 215</p> <p style="padding-left: 20px;">3. Torque-free symmetrical top 217</p> <p style="padding-left: 20px;">4. Euler’s angles 220</p> <p style="padding-left: 20px;">5. The heavy symmetrical top 222</p> <p style="padding-left: 20px;">6. Applications 229</p> <p>18 Coupled pendulums 237</p> <p>19 Elastic rod and string. Musical string instruments 246</p> <p>20 Fourier’s theorem 255</p> <p>21 Standing and travelling waves of string 262</p> <p>22 Forced oscillation 271</p> <p style="padding-left: 20px;">1. Forced oscillation of a single oscillator 271</p> <p style="padding-left: 20px;">2. Forced oscillations of a string 284</p> <p>23 Laws of conservation 290</p> <p style="padding-left: 20px;">1. Statement of classical laws of conservation 290</p> <p style="padding-left: 20px;">2. Proof of the laws from symmetry principles 293</p> <p>24 Newton’s third law. Central and non-central forces 305</p> <p style="padding-left: 20px;">1. Newton’s third law 305</p> <p style="padding-left: 20px;">2. Central forces 305</p> <p style="padding-left: 20px;">3. The third law in relation to the theory of relativity 310</p> <p style="padding-left: 20px;">4. Non-central forces 315</p>

CONTENTS

5. Note on the polar and axial vectors and mirror symmetry	318	2. Euler's differential equation	327
6. Note on the rest frame	321	3. The derivation of Lagrange's and Hamilton's equations	328
25 The Hamilton–Jacobi theory—the passage to quantum mechanics	322	4. The principles of Maupertuis and Jacobi	333
1. Hamilton's principle of least action	322	5. Canonical transformations	337
(a) Statement of the principle	322	6. The Hamilton–Jacobi differential equation	342
(b) Functions as unknowns	323	7. Jacobi's method	349
I. Differential equations	323	8. Multiply-periodic motion. Action and angle variables	352
II. Integral equations	323	Bibliography	356
III. Stationary functionals	325	Index	357
